BROOKLYN - - - NEW YORK

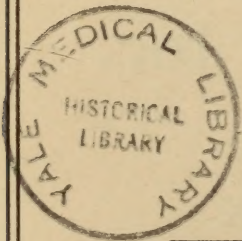

1917

All works of taste must bear a price in proportion to the skill, time, expense and risk attending their invention and manufacture. Those things called dear are, when justly estimated, the cheapest.

They are attended with much less profit to the artist than those which everybody calls cheap. A disposition for cheapness and not for excellence of workmanship is the most frequent and certain cause of the decay and destruction of arts and manufactures.

—*Ruskin*

W. R. Grady, Madison, Wisconsin

Introductory

Owing to the great advance in the cost of material, and a corresponding advance in the wages of labor within the past two years, it has become necessary to raise our prices, and, as future conditions may demand, to make other changes without further notice.

Quality

In the construction of our instruments and apparatus, we follow only the approved patterns, the best methods of construction, and employ only the most expert labor. We guarantee every instrument and apparatus sold to be perfect in design, construction, material and finish. We stand ready at all times to replace, without expense to the purchaser, any article that proves defective in any of these qualities.

Infallibility

We use every endeavor in our power to please our patrons. We are not infallible. Sometimes we make mistakes. If anything occurs which is not thoroughly satisfactory, please tell us promptly. We can not make corrections until we know of the error. It is an injustice both to you and to us to harbor an unsatisfactory incident and say nothing to us. We are always ready to meet and adjust any such error.

Co-operation

We solicit not only your trade, but your ideas and suggestions. In order to secure the best results in any line of endeavor, co-operation is absolutely imperative. It is only by working together, and by our coming into closer contact with each other, that we can best serve the interests of humanity and unitedly build up our mutual reputations and business.

Service

Service is a word that is badly abused, but we believe by conscientious effort on our part that we can make it stand for something more than mere talk, and we ask you in all sincerity to help us, by honest and, if necessary, severe criticism, when you think we have fallen short.

Appreciation

We thank our patrons for their past favors and kindly interest, and we ask for a continuance of their favor on the lines of QUALITY, CO-OPERATION and SERVICE.

FRED HASLAM & CO., Inc.

A n U n d e r s t a n d i n g

RIGHT shipments are F. O. B. New York. Express shipments from Brooklyn leave on same trains as shipments from New York and rates are identical.

We are not responsible for any loss or breakage of instruments when ordered sent by mail.

No goods can be returned to us without our permission.

When ordering please be explicit, not only in giving name, address and shipping directions, but in specifying the articles wanted by giving name, section letter and number. When two or more sizes are listed under one number please be careful to state the size desired.

Unless otherwise ordered all goods will be sent by express, except in cases where small articles go cheaper by mail, when the postage will be charged on the bill. Whenever requested to do so we shall be glad to accommodate by prepaying transportation charges and entering the same upon the bill.

Orders from parties unknown to us should be accompanied by the cash or satisfactory references.

All remittances should be made by draft, money order, or express order. When money is sent in any other way the amount of the exchange should be added.

All prices listed are net, except where special discounts are mentioned.

Our goods are thoroughly examined and carefully packed before leaving our establishment. They should reach their destination in perfect condition. Our responsibility ceases when goods are delivered to the carrier.

Search all packing carefully before claiming shortages. We make no charge for boxing or packing.

FRED HASLAM & CO., Inc.

DISSECTING AND POST MORTEM CASES

DISSECTING CASES

- A-185 Vest Pocket Case. The cutting instruments in this neat and compact case are superior to those usually put in dissecting sets, being made of the best English steel and hand forged. The blades are the most approved patterns for fine work. Contents: 3 special knives or 2 special knives and 1 tenaculum, 1 forceps, 1 fine scissors, 1 set chains and hooks, in fine leather case, with tilting flap for knives. Price.....\$5.00

POLISHED WOOD CASE

 *A-228 No. 3. Case, with metal handle instruments..... 3.50

LEATHER CASE

- A-221 No. 2. Case, with metal handle instruments..... 3.50

CONTENTS OF DISSECTING CASES

- No. 1. Dissecting Case, contains: 1 scalpel, 1 tenaculum, 1 cartilage knife, 1 forceps, 1 scissors, 1 set chain hooks, 1 blow pipe.
 No. 2. Dissecting Case, contains same as No. 1 with 1 scalpel added.
 No. 3. Dissecting Case, contains same as No. 2 with 1 scalpel added.
 No. 4. Dissecting Case, contains same as No. 3 with 1 scalpel added.

POST MORTEM CASES

- A-250 Twentieth Century Post Mortem Case. Contents: 4 best quality scalpels, 1 heavy cartilage knife, 1 reamer, 1 enterotome scissor, 1 calvarian hook, 1 bone chisel, 1 blowpipe, 1 amputating knife, 1 small cartilage knife, 1 dissecting scissor, 1 steel hammer, 1 amputating saw, 1 rachiotome, 1 set chain and hooks, 3 post mortem needles and ligatures. All on a finely nickel-plated rack—no solder being used—thus rendering it capable of being thoroughly sterilized for protection of operator. The case is leather covered with nickel trimmings, having a very comfortable handle35.00
- A-251 U. S. Army Post Mortem Set, in oak case, leather lined. Contents: 1 U. S. A. knife, 1 scalpel, 1 chisel and 1 saw fitting one handle, 4 dissecting scalpels, metal handles, 1 tenaculum, metal handle, 2 dissecting scissors, 1 dissecting forceps, 1 triple chain and hook, 1 blowpipe, needles and silk. Each20.00
- A-252 U. S. Marine Hospital Post Mortem set, in oak case, wood blocked. Contents: 2 dissecting scalpels, metal handles, 1 tenaculum, metal handle, 1 cartilage knife, metal handle, 3 Virchow's cartilage knives, 1 rachiotome, 1 costotome, 1 Charrière's blade saw, 1 enterotomy scissors, 1 dissecting scissors, 1 artery scissors, 1 dissecting forceps, 1 rawhide mallet, 1 director and tongue tie, 1 blowpipe, needles and silk. Each.....26.50
- A-253 Post Mortem Set, small, in oak case, leather lined. Contents: 4 dissecting scalpels, metal handles, 1 cartilage knife, metal handle, 2 grappling hooks, double prongs, 1 Charrière's blade saw, 1 steel hammer, 1 post mortem chisel, 1 dissecting scissors, 1 probe point, 1 dissecting forceps, 2 probes, fine, 2 blowpipes, needles and silk. Each.....17.50

MEASURING ROD

A-401	Douglass', improved (circular on request).....	3.50
-------	--	------

WEIGHING SCALES—"THE IMPROVED MADACO"

A-402	The "Improved Madaco" employs the perfect mechanical principle used in the Automobile Speedometer. Correct weight is instantly ascertained by glancing in the glass aperture set into the top of the outer case, which covers a revolving dial clearly marked with the regular graduations. Capacity, 250 lbs. Platform, 8x10 inches. Height, 8 inches. Weight, 30 lbs. Price.....	10.00
-------	--	-------

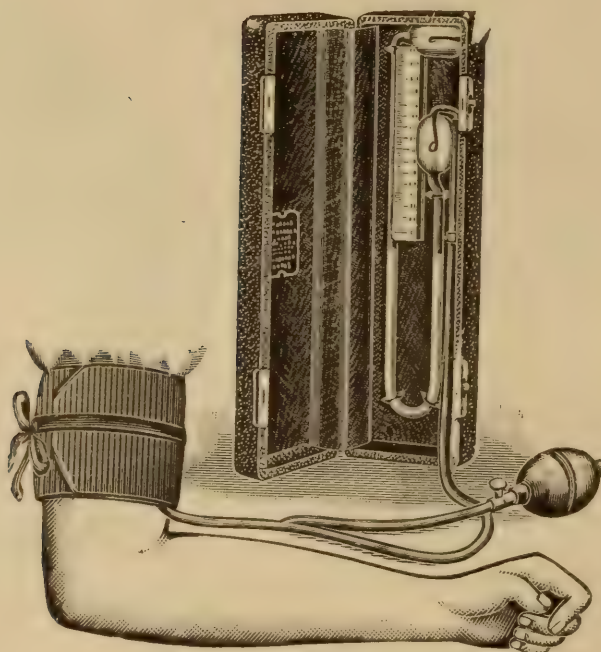

THE "CORONA" PHYSICIAN'S SCALE

A-403.	Description—The "Corona" is one of the handsomest Physician's or Bathroom scales we make. The beam is heavy brass, nickel plated. Beams graduated ¼ lb. x 25 lbs. The measuring rod, weights and weight rack are also nickel plated, giving the scale a very handsome appearance. Specifications—The "Corona" has a capacity of 300 lbs. Platform is 10½x13½ in.; height, 55 in. Shipping weight, boxed, approximately 80 lbs. Prices: "Corona," including measuring rod.....	18.00
	Rubber mat for platform (net extra).....	.50

THE "DE LUXE" PHYSICIAN'S SCALE

A-404	The "De Luxe" Compound Beam Scale; no loose weights. Specifications—The capacity is 300 lbs., all shown on the beams. Height, 58 in.; platform, 10½x13½ in. Weight approximately 85 lbs., boxed for shipment. Upper bar graduated ¼ lb. x 50 lbs. Lower bar graduated 250 lbs. x 50 lbs., notched. Prices: "De Luxe" Scale without measuring rod.....	22.50
	Nickel-plated brass telescope measuring rod.....	4.50
	Rubber platform mat (net extra).....	.50

A-356

THE "BROWN SPHYGMOMANOMETER"

A-356. Designed by E. M. Brown, M. D., Associate Professor of Surgery,
P. & S., Chicago

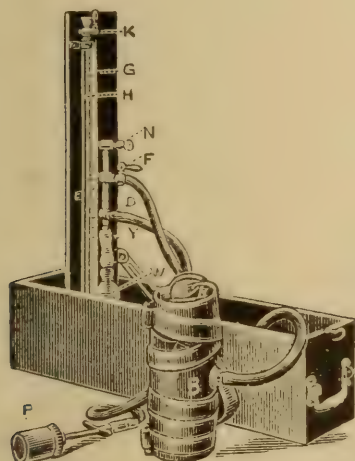

It is the wish of the designer of this instrument to give the profession the benefit of the sum usually paid as royalty. We are therefore enabled to sell the instrument at a comparatively low price.

ADVANTAGES

Has the only glass manometer tube out of which mercury cannot be shaken; mercury comes in contact with glass only; simplicity of the arm band construction; only one connection between the arm band and instrument is necessary as against two and three in other instruments; guaranteed accuracy; registers to 300 mm.; made in four sizes.

DIAGNOSTIC

A-371 TYCOS (DR. ROGERS) SPHYGMOMANOMETER

"BLOOD PRESSURE READINGS taken from ANY INSTRUMENT OF UNKNOWN ACCURACY are WITHOUT VALUE IN DIAGNOSIS."

THE TYCOS SPHYGMOMANOMETER IS SELF VERIFYING

Exact Size

The TYCOS SPHYGMOMANOMETER IS SELF VERIFYING. It ANSWERS the question of ACCURACY by a glance at the dial each time of use. When the manometer is right, and not under pressure, THE HAND RESTS WITHIN THE OVAL ZERO. When it does not rest within the oval zero the instrument is wrong.

ALL OTHER SPHYGMOMANOMETERS, irrespective of type or make, must first be compared with another instrument of known accuracy before the VITAL QUESTION of CORRECTNESS can be definitely answered.

POINTS OF SUPERIORITY

1. Self Verifying. 2. Non-Adjustable Dial. 3. Permanent Fixed Zero. 4. Unequaled Accuracy. 5. Standardized and Engraved Dial Scale. 6. Full Jeweled Movement. 7. Protection Against Over-Inflation. 8. Easy Reading Scale. 9. One-Way Manometer Connection. 10. Unaffected by Temperature. 11. Unaffected by Atmospheric Changes. 12. Simplicity of Operation. 13. Washable Arm Sleeve. 14. Pressure Bag of Standard Dimensions. 15. Perfect and Instant Pressure Control. 16. Durability. 17. Portability. 18. The TYCOS makers. 19. TYCOS SERVICE.

INFORMATION

The TYCOS Blood Pressure Manual sent by mail at once upon request.

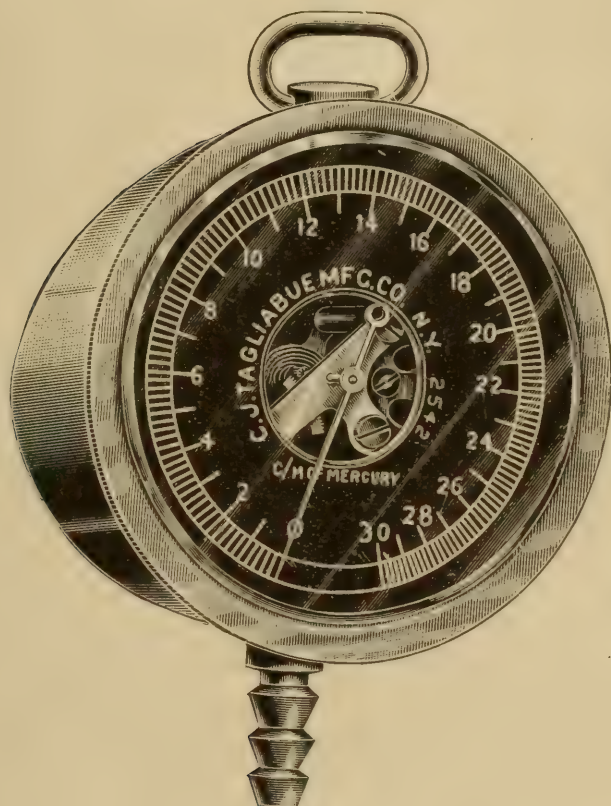

PRICE

Complete with carrying case and sterilizable sleeve. Net.....\$25.00

DIAGNOSTIC

A-377 THE TAG SPHYGMOMANOMETER IS AN EXCEEDINGLY EFFICIENT INSTRUMENT

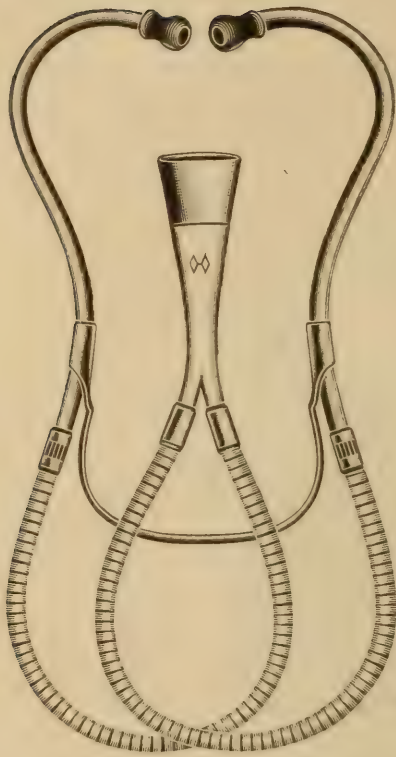

A-377

FIFTEEN REASONS WHY THE TAG SPHYGMOMANOMETER SHOULD BE THE INSTRUMENT OF YOUR CHOICE

GAUGE—1. It cannot be pumped beyond its maximum indications. 2. Diastolic pressure is always accurately determined by our improved micrometer valve. 3. The unusually large dial allows less crowded graduations—hence easier reading. 4. Each scale is individually graduated on our precision dividing engines. 5. Internal mechanism is of utmost simplicity and free from any lost motion. 6. The case is gold-plated and has a finely-frosted finish. 7. The gauge lies flat on the arm, placing dial at right angles to line of operator's vision. **ARM-SLEEVE**—8. The rubber pressure bag is removable and replaceable. 9. Pressure bag holder is made of the finest suede leather. 10. The extension of the pressure bag holder is of special moire-canvas. 11. The strap and buckle of the pressure bag holder is equipped to readily and securely apply the proper degree of tightness. 12. All parts are interchangeable and can be renewed at moderate cost. **MICROMETER VALVE**—13. Instant pressure release is made possible by our specially devised push-button feature. 14. The container is of genuine leather inside and out and easily slips into the coat pocket. 15. It is built and guaranteed by a manufacturer of scientific instruments of national reputation and sold by all reliable surgical instrument dealers.

DIAGNOSTIC

THE E. Z. C. CLINICAL THERMOMETER.

A Clinical Thermometer That Every Physician and Nurse Will Appreciate.

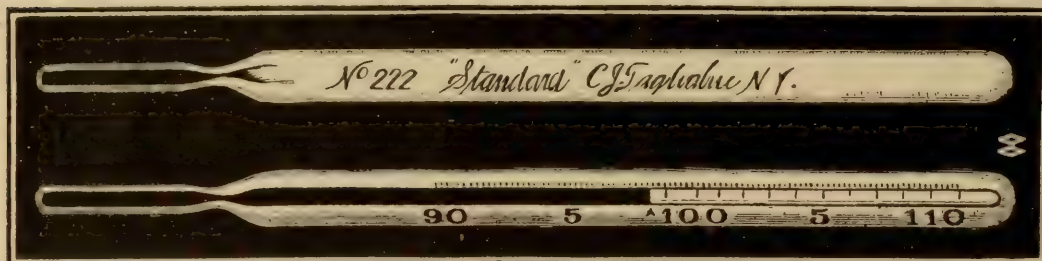

A-612-613-614

The scale is divided into two separate and distinct sections—the **sub-normal** scale (below 98.6), which appears in **black**, and the **“fever scale”** (above 98.6), which appears in **red**. The result is that the mercury column of this Thermometer shows with a pronounced step or jog at the normal point, if the temperature reading is within the fever scale.

The “E Z-C” Clinical Thermometer has all the good points of other high-class Thermometers, coupled with extreme accuracy.

THE “TAGLIABUE” STANDARD CLINICAL THERMOMETERS.

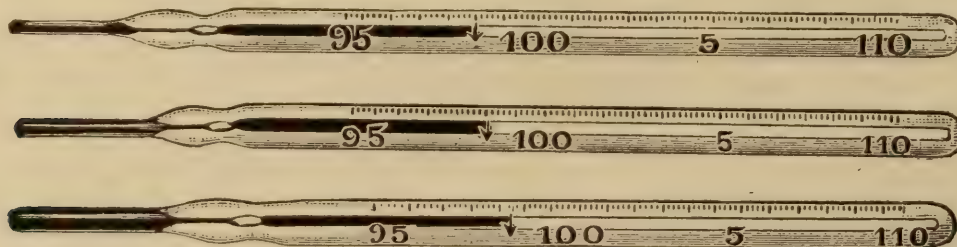

A-610-615-620

Standard Clinical Thermometers represent the highest type of thermometers made either in this country or abroad. They are made of the best glass obtainable, by only the most skilled workmen, are fully seasoned before being graduated, are carefully re-tested before shipment, and are guaranteed not to increase their reading with age. They are guaranteed to be free from all imperfections, and absolutely correct as certified.

In order to avoid substitution, the word “Standard,” the series No. 222, and the trade mark of the manufacturer is engraved on each. Certificates issued by the U. S. Government Bureau of Standards or the manufacturer accompany each instrument. We highly recommend the use of this thermometer to physicians who want an instrument, the accuracy of which can be thoroughly depended on.

- A-610 Standard Clinical Thermometer, 2 minute.....\$1.25
- A-615 Standard Clinical Thermometer, 1 minute..... 1.50
- A-620 Standard Clinical Thermometer, ½ minute..... 1.75

NOTE.—All E. Z. C. and Standard Clinical Thermometers are furnished with our “Zipp” thermometer case (for description see next page). Hard rubber or other styles of cases can be furnished if desired.

Unless otherwise specified Harvard Clinicals are supplied in Acme (patented), hard rubber or nickel cases, assorted, with and without chains.

"JEWEL" PYRETOMETERS.

A-637

Designed for use in contagious diseases, as typhoid, scarlet fever, and diphtheria,—for hospitals or wards devoted to Consumptive patients and for Rectal use.

Jewel Ring Top Pyretometers have glass rings blown on the distal end in several colors to indicate their special purpose.

Generally Emerald is used for Typhoid, Ruby for Scarlet Fever, Sapphire for Diphtheria, Opal for Tuberculosis, and Amber for Rectal use.

SPECIFICATIONS.—Lenses and scales are choice, comparing favorably with Harvard Clinicals, and every Pyretometer has a guarantee of accuracy.

THE "ZIPP" CLINICAL THERMOMETER CASE A-622

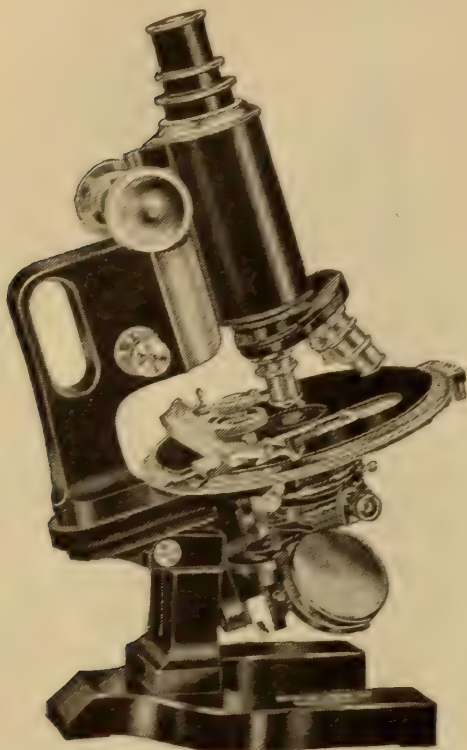

The principal feature of the patented Zipp case is the centrifugal action employed for mechanically forcing the mercury into position for another reading.

Within the metal case a spiral spring fastened to the bottom of case, and running to the top, is fastened to a revolving ferrule provided with two openings for the reception of the thermometer. If this ferrule is revolved the spring necessarily "winds up" and rapidly rotates the ferrule in the opposite direction when released, throwing the mercury in the lumen of the thermometer to the periphery or bulb end instantly. An adjustable clip for securing the case to the pocket, and to prevent rolling.

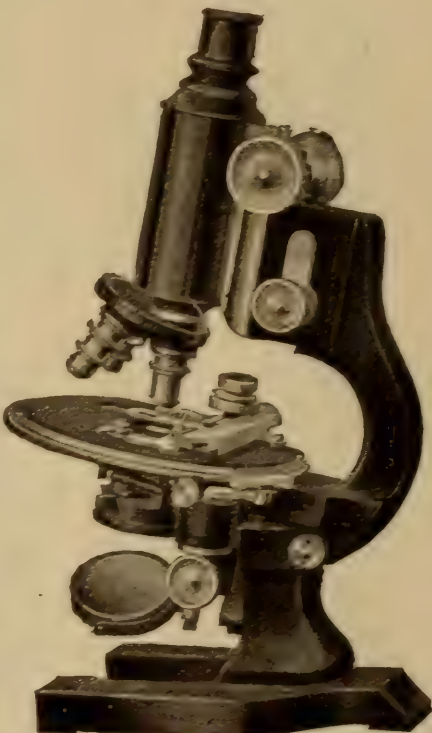

The "Zipp" case is furnished only with E. Z. C. and A-622 Standard thermometers, and is not sold separately.

SPENCER MICROSCOPES—AMERICA’S STANDARD

Spencer Microscope No. 10

Spencer Microscope No. 5

For
Research
and
Photo-
Microg-
raphy

These two microscopes are made for work of the very highest and most exacting character—visual and photo-micrographic. They are identical in construction and equipment with the exception of the form of the arm, pillar and base. Both are equally efficient.

The Aluminum Body Tube is 50 mm. in diameter and is arranged to accommodate the large, low power photo-micro objectives as well as those with the Society screw, and standard oculars.

The Arm is large, forming a most convenient handle by which to grasp the instrument with the whole hand. It is provided with our well known side fine adjustment. One complete revolution of the thread represents an up-and-down movement of .1 mm. The graduations on the button to 100 parts make the value of each division one micron.

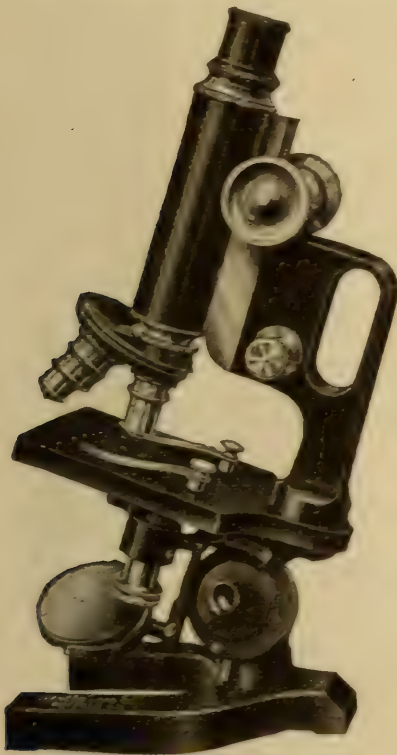

The Revolving Stage is 150 mm. in diameter—130 mm. of its surface being covered with vulcanite. The nickeled periphery is graduated to degrees, and the vernier reads to three minutes.

The Mechanical Stage is easily removable by simply slipping it off from its bearings, which are embedded in the stage, in reality “two stages in one.” When removed, these bearings may be covered by a slide provided, which makes a clear, even, plain stage without the necessity and expense of buying an extra plain stage. The buttons operating the mechanical stage are on **concentric axes**, one above the other. There is a range of 80 mm. in lateral movement and 50 mm. in to-and-fro movement. When the large stage is centered by means of the centering screws, the two vernier readings of the mechanical stage are all that are necessary to locate an object.

The Complete Rack-and-Pinion Substage is regularly supplied. The instrument is furnished in a beautiful mahogany cabinet.

SPENCER MICROSCOPES—AMERICA'S STANDARD

Spencer Microscope No. 20

For
Research
and
Critical
Clinical
Work

Spencer Microscope No. 22

These microscopes are offered for advanced laboratory research and clinical work of the most exacting character. The two instruments are identical in construction and equipment, with the exception of the stages—No. 20 having a square stage, No. 22 a circular revolving stage. Both are equally efficient.

The Body Tube is of our standard size. The draw tube is adjustable in cloth-lined sleeve, or with metal fitting when so specified.

The Arm is of solid brass with the new side fine adjustment, which is five times as fine as the prism or lever types. The distance from the base of arm to the optical axis is 68 mm.

The Stage of No. 22 is 120 mm. diameter, No. 20 is 110 mm. by 108 mm. Both are covered with genuine vulcanite rubber, vulcanized directly to the stage plate. The edge of No. 22 is milled.

The Substage is the quick-screw form and is fitted with drop-swing condenser mounting, which enables the Abbe condenser to be thrown to one side, leaving in place the upper iris diaphragm, which is automatically locked when the condenser is returned to its normal position. By this simple movement, the condenser drops from its position in the optical axis and swings entirely out of the way. The mirror is plane on one side and concave on the other, 50 mm. in diameter, mounted on adjustable bar.

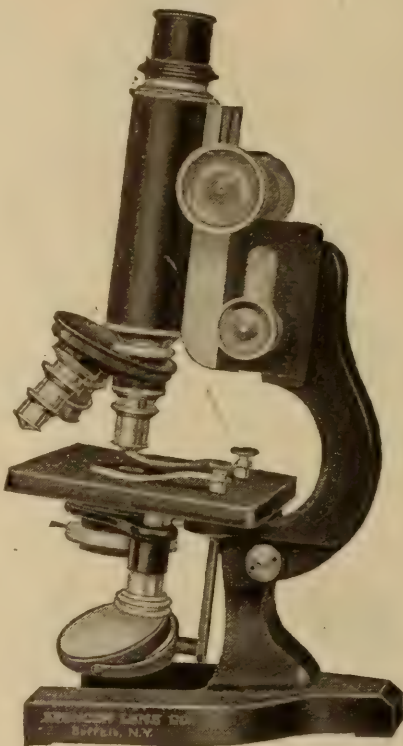

Finish—It is finished in alcohol-proof black lacquer, trimmed with yellow also alcohol-proof.

The cabinet is hard wood in natural polished finish. with handle, lock and key.

SPENCER MICROSCOPES—AMERICA'S STANDARD

SPENCER MICROSCOPE
NO. 25

THE increasing popularity of the new type of microscope introduced by us as represented by our **No. 45**, together with the continually growing demand during the past **ten years** for our side fine adjustment, has induced us to combine the two in our new **No. 25** microscope.

No. 25 is like **No. 45** as regards the exceptionally large stage, the great distance (80mm.) from the optical axis to the arm, the substantial and beautiful outlines, the automatic device by which the upper iris is locked open when the condenser is in place, etc. The Spencer side fine adjustment, with the improvements which ten years have brought, appeals to the practical worker because of its simplicity—a simple movement, no gears or complicated parts to wear and get out of order, thus causing lost motion. The pressure of the tube by spring tension downward is continuously transmitted through the nut and thread in one direction only, from the tube to the operator's hand. Any possible wear is thus automatically taken up. It insures a quick response, **no lost motion** and a delicate adjustment; one complete revolution of the screw in either given direction moving the body tube (always in the same direction as the rack and pinion) through a distance of 100 microns, **which is fine enough for the most delicate work**, and is **not so fine that the slowness of the movement becomes a detriment**, as is sure to be the case with anything finer.

Size of stage, 112mm. wide, 108mm deep.

Distance from optical axis to base of arm, 80mm.

Stage, vulcanite covered edges as well as the top.

The graduated button is divided into 100 parts, each division representing a movement of one micron.

Fine adjustment buttons on both sides workable with either hand.

The fine adjustment ceases to work when the objective rests on the cover glass.

The low, compact construction insures comfort in using.

The upper iris diaphragm is automatically locked open when condenser is in place.

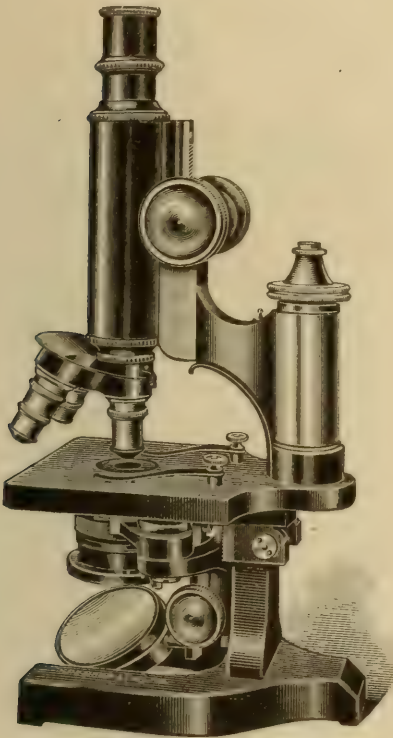

The fine adjustment buttons are conveniently located and of suitable size.

The fine adjustment, simple and efficient in construction, responds promptly with no lost motion, and automatically takes up for any possible wear. It is always responsive.

SPENCER MICROSCOPES—AMERICA'S STANDARD

Spencer Microscope No. 30

FOR
RESEARCH
AND
CRITICAL
CLINICAL
WORK

Spencer Microscope No. 36

These microscopes are offered for advanced laboratory, research and clinical work of the most exacting character. Microscope No. 30 is equipped with complete rack and pinion substage, continental prism fine adjustment, with handle beneath arm for carrying. Microscope No. 36 is equipped with the regular quick-screw substage, lever fine adjustment and handle in arm for carrying.

The Body Tube is of our standard size, 37 mm. outside, with Society thread; the graduated draw tube taking standard size eyepieces, and adjustable, in cloth-lined sleeve, or with metal fitting when so specified.

The Arm on No. 30 contains the very accurate and sensitive prism type of fine adjustment, which is operated by a graduated micrometer screw, providing a free distance of 67 mm. from its optical axis. Beneath it, independent of it and following the curve of its lower edge is a neat unobtrusive handle which provides a means for carrying the instrument safely without injury to the fine adjustment. This is a patented feature and is found on no other microscope. The Arm of No. 36 is of the handle type, similar to that of Nos. 20 and 22. Its fine adjustment is of the top lever type, with graduated micrometer screw.

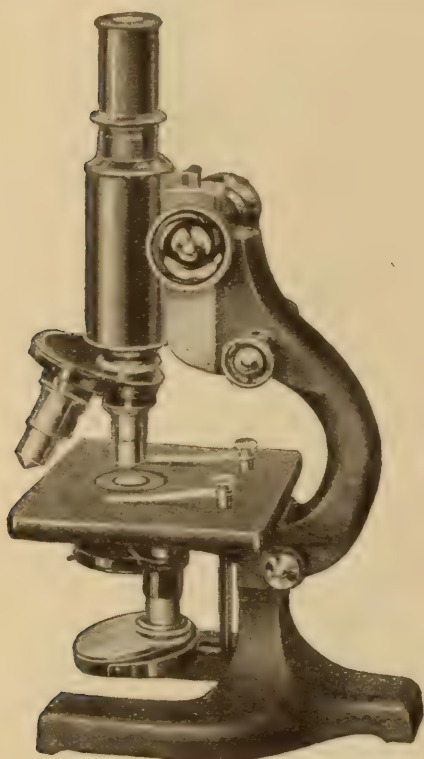

The Stage is covered, top and edges, with a heavy seamless genuine rubber, vulcanized directly to the stage plate. Size of stage 108 mm. x 112 mm.

The Substage of No. 30 is the complete rack-and-pinion type. That of No. 36 is the ordinary quick-screw substage. In both the Abbe Condenser automatically locks the upper iris open when it is in place, thus preventing breakage of diaphragm leaves.

These instruments are beautifully finished in black and yellow lacquer, both of which are alcohol-proof. The cabinet is hard wood, natural finish and polished.

SPENCER MICROSCOPES—AMERICA’S STANDARD

Spencer Microscope No. 44

FOR
CAREFUL
MEDICAL
WORK

Spencer Microscope No. 45

These microscopes we offer for the use of the general practitioner who desires to attain efficiency of work and at as moderate a cost as possible. The two instruments are identical in construction and equipment, with the exception of the fine adjustment and the arm, No. 44 having a side fine adjustment, while No. 45 has a top lever adjustment. The fine adjustment of No. 44 is 2½ times finer than that of No. 45. These microscopes are very generally used in the medical colleges and hospitals throughout the country.

The Body Tube is standard size—37 mm. outside diam., with Society thread; the draw tube taking standard eyepieces.

The Arm is large, making a convenient grasp for handling. The distance from optical axis is 80 mm. The fine adjustment of No. 44 is of new form, simple but very efficient, in fact as much so as any other Spencer fine adjustment, guaranteed to give no lost motion or side thrust. The thread bearing shaft with focusing buttons on both ends passes back and forth through the arm, thus affording the user an opportunity of seeing at a glance its position relative to either limit, a point which will be especially appreciated—in fact, it is the only fine adjustment made with this advantage. In the construction of this fine adjustment there are no inclined planes, balls or cams to cause trouble. Neither are there gears of any kind, the wearing of which is sure to give lost motion. Any possible wear is automatically provided for. It is most satisfactory in every way. The fine adjustment of No. 45 is of the top, lever type, the same as that in microscope No. 36.

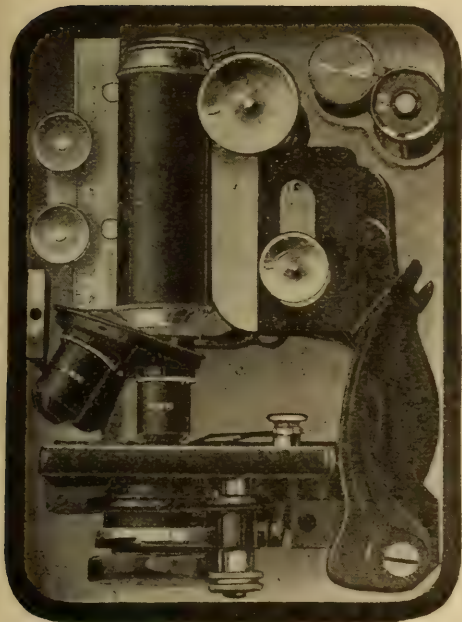

The Stage is vulcanite covered, it is 112 mm. wide and 108 mm. deep. It is provided with the regular substage of the quick-screw type; the upper iris diaphragm is automatically locked open when the condenser is put into place, no matter how the condenser may be placed in the substage ring.

The microscope is finished in alcohol-proof black enamel and alcohol-proof yellow, the same as the other microscopes. It is furnished in a hardwood cabinet.

SPENCER MICROSCOPES—AMERICA’S STANDARD

Folded in Case

In Closed Case

Spencer Portable Microscope
No. 60H

This microscope is offered for Bedside Diagnosis, and for the use of the physician who has occasion and desires to carry his microscope with him at times, as well as having a very efficient instrument for his office and laboratory use. It is a full size, completely equipped, compound microscope, so uniquely designed and put up in such compact form that it may be carried without inconvenience to the bedside of the patient.

The microscope is enclosed in a metal case, the two halves of which are hinged together. Each half is a single casting of magnalium, a light alloy of aluminum, which is resistant to weather conditions. The wall is strengthened around the edge by a narrow band of increased thickness, which is sufficient for holding a felt buffer to make the case dust-tight. This buffer is burnished into the metal. There is absolutely no glue used to fasten any of the pads.

The case of magnalium is 8¾ inches long, 6½ inches wide and 3¾ inches thick outside dimensions. Not only does this small case hold the microscope, but may also be fitted to take mechanical stage, haemacytometer, haemaglobinometer, slides, covers, etc.

To prepare for using this microscope, it is only necessary to lift the instrument from the case, turn the legs to position and pull the draw-tube. It goes into the case with objectives in position on the nose piece. It weighs but 9½ lbs. Metal caps screw over the objectives to protect them when not in use.

A-860—SPENCER
ATTACHABLE MECHANICAL
STAGE No. 490

The common-sense features and general accuracy and efficiency involved in Spencer mechanical stages have compelled such general recognition that they are now considered the standard type. They may easily be clamped to any rectangular microscope stage—a feature originated by us nearly ten years ago, and since used.

A stop at the front always insures its return to the same position on the microscope stage; so that should work be interrupted and the mechanical stage removed, when it has been replaced, any part of the specimen under observation may be instantly found by noting the vernier readings. The vernier of the lateral movement is placed slightly to one side of the arm of the microscope where it can easily be read.

The movements of this mechanical stage are by diagonal rack and pinion, and are entirely firm and reliable; permitting the most delicate adjustments. The range of movement is large in both directions; giving 85 mm. lateral motion and 40 mm. to and fro with mechanical stage No. 485 and 85 mm. lateral motion and 65 mm. to and fro with mechanical stage No. 490. It will thus be seen that No. 490 meets the demand for handling a 3x2 inch slide. This will especially appeal to those who desire to work with large slides. The clamp at the front of the stage, No. 490, is so arranged that it does not interfere with the slide. Stage No. 490 also has a registering feature, so that the vernier reading designating the locations of objects taken on one microscope may be made to register with the readings for the same objects taken on another microscope. The vernier for the to and fro movement is adjustable.

Both stages are beautifully finished in black lacquer to avoid reflection of light. They are supplied in neat cases.

MICROSCOPE ACCESSORIES

A-866—SPENCER DARK FIELD ILLUMINATOR No. 340

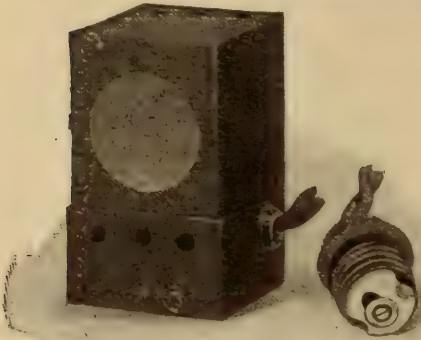

This illuminator can be used on any microscope. The condenser is mounted in a solid piece of brass with slots at the end for the stage clips of the microscope. It permits the use of slides on the top surface. The top surface of the condenser is provided with a little ring by which it may be carefully centered.

Direct sunlight may be used. Fairly good results may be obtained by using a Welsbach light, but the best source of light is the electric arc light. Spencer No. 360 arc light is especially constructed for such work. Price in neat case, including special diaphragm for immersion objectives.....\$10.00

A-866

A-867A—NEW MINIATURE MICROSCOPE ELECTRIC LAMP No. 385

This lamp is constructed to throw the light either on the mirror or directly up through the condenser of the microscope. Gives illumination sufficient for oil immersion work, 1.8 objective and 10+ ocular. It is small and compact, but very efficient. Beautifully finished in our new black crystal lacquer. No light can escape except through the single opening.

Equipped with a 10-watt Mazda bulb, and works on any 110-volt circuit. It can be used on 220-volt current when placed in series with proper resistance. Supplied with blue and ground glasses.

	Price
A-867A Lamp No. 385, with Mazda bulb, 5 feet of cord and socket.....	\$3.50

MICROSCOPE ACCESSORIES

A870 FREEZING CHAMBER NO. 930

A870

Originally invented by Dr. H. R. Gaylord of Buffalo, has been greatly improved by suggestions from Dr. L. B. Wilson, Mayo Bros. Hospital, Rochester, Minn., where many Spencer microtomes are in daily use. Also used by over 500 other hospitals and college laboratories in the United States.

This freezing chamber is made of hard rubber, which prevents the radiation of the cold, so that the tissue is frozen immediately with a minimum amount of gas. By the use of a special valve, operated by a small lever, the tissue is frozen without waste of gas and without any inconvenience caused by the freezing up of the chamber or the connections.

No. 930 Spencer Freezing Attachment for CO₂.....No. 930 \$10.00

A880 SPENCER AUTOMATIC LABORATORY MICROTOME NO. 880

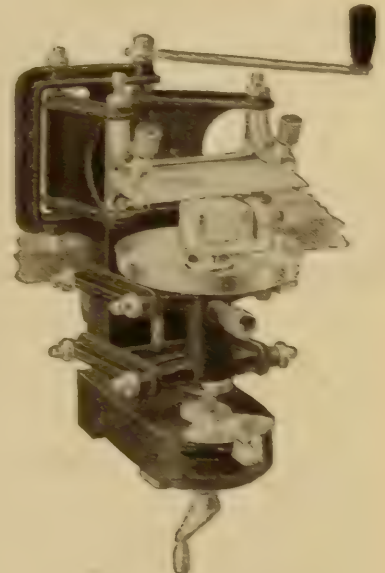

For Frozen Section Work, Also for Celloidin and Paraffin

It has an automatic feed mechanism, simple in construction, covered and protected from dust and drippings.

It may be securely clamped to a laboratory table.

It may be set to cut sections of any desired thickness. Each division of the graduated scale marks five microns.

The extreme ends of the knife rest in the holder and, as the lever handle moves the swinging arms, the knife describes a flattened curve, corresponding to the double movement in free-hand sectioning. By this manner of holding the knife by arms which are not parallel, the entire length of its cutting edge is utilized, insuring uniform wear and permitting the cutting of very large sections. This peculiar motion of the knife makes this microtome pre-eminently fitted for cutting frozen sections. When used with Spencer CO₂ or other freezing attachments for frozen section work it is unequalled.

A-880 SPENCER AUTOMATIC LABORATORY MICROTOME NO. 880

A-880 Spencer Automatic Laboratory Microtome No. 880, complete, with one knife and usual clamp for paraffin or celloid.....\$50.00

Quality Guaranteed. Specify section letter and number in ordering.

MICROSCOPIC

Freezing Attachments and Section Knives

**A-882 SPENCER'S ETHER FREEZER NO. 915**

This little apparatus is not as good as our CO₂ freezer, but is the best of its kind. Ether is often available when CO₂ is not.

Price.....net \$6.00

A-882

A-884 SPENCER'S MICROTOME KNIFE NO. 965

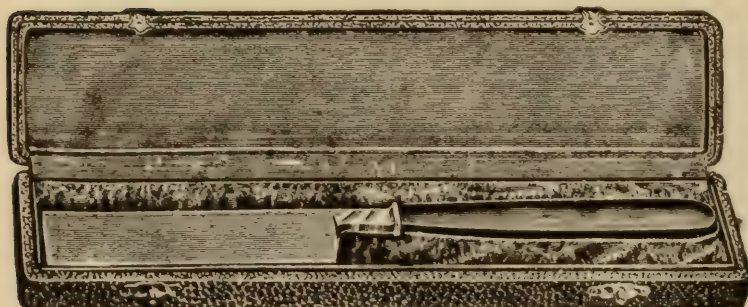

This chisel blade form knife is very convenient for use on the table microtome, and is preferred by many, especially where a freezing chamber is used.

It has a cutting edge of 88 mm. The handle is of such size and shape that the knife can be easily held in the desired position.

A-884 Spencer's Microtome Knife No. 965.....net \$4.00

A-884

A-876-877-878

A-876 HAND SECTION KNIFE

This knife is made with straight steel blade, flat on one side, with solid ebony handle, of the very best quality of steel and finish. Made in three sizes. Put up in leather covered, velvet lined case.

A-876 Hand Section Knife, blade length 140 mm...\$5.00

A-877 Hand Section Knife, blade length 100 mm... 3.50

A-878 Hand Section Knife, blade length 75 mm.... 2.50

A-879 SECTION RAZOR

These razors are made of the best quality of steel, and especially designed for section cutting. They have heavy backs, which makes them less liable to yield under manipulation.

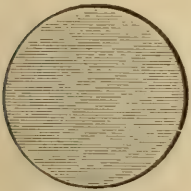

A-879 Section Razor, folding, hard rubber handle\$2.00

APPARATUS FOR BLOOD TESTING

- A-2100 Thoma Zeis's Haemacytometer.
Haemacytometer, complete in case, with one Thoma pipette for counting red corpuscles only, and Thoma counting chamber.....\$11.00
Haemacytometer, complete in case, with both Thoma pipettes for counting red and white corpuscles, and Thoma counting chamber..... 13.50
A standard instrument for counting the number and ascertaining the percentage of white corpuscles in human blood. A measured quantity of blood in a capillary pipette is diluted with a normal solution in known proportions; a drop of this mixture is deposited upon a small sunken counting chamber and a cover placed thereon. This glass counting chamber is ruled in minute squares and the number of corpuscles in a number of squares is counted with a medium power microscope objective.
- A-2103 Thoma-Metz's Haemacytometer, for counting red and white corpuscles, in case. Instead of a ruling in the slide, a glass plate with ruling is mounted in a microscopic eyepiece. To find the number of red corpuscles in a cmm. of blood, dilute as customary, 1:100, count the corpuscles in the large square and append 00,000 (5 ciphers) to this figure. For white corpuscles dilute 1:10 as customary, count the number of corpuscles visible in the large circle, and append 000 (3 ciphers) 19.25
- *A-2105 Counting Chamber, Thoma rulings, with two cover glasses, in case.... 6.90
*A-2110 Counting Chamber, Zappert's rulings, with two cover glasses, in case 7.75
*A-2115 Counting Chamber, Tuerk's rulings, with two cover glasses, in case.. 9.60
A-2120 Extra Pipettes, for red corpuscles, 1-100 2.50
A-2125 Extra Pipettes, for white corpuscles, 1-10 2.50
*A-2130 Haemometer, Von Fleischl's, a standard instrument for obtaining the percentage of haemoglobin in the blood by dilution of a fixed quantity with a measured amount of distilled water, comparing the resulting color with successive parts of a glass wedge of fixed colors varying in depth. Price, complete, in case..... 28.50
- *A-2132 Haemometer, Sahli's, with hard rubber stand, in case..... 7.50
A-2140 Haemoglobinometer, Gower's, deals with a measured amount of blood diluted with distilled water in a graduated tube until it is of the same color as the tinted tube provided, when the percentage is read off on the scale. Accurate to within about 5 or 10 per cent. Latest modification after Sahli, for using either day or night..... 3.00
- *A-2145 Haemoglobinometer, Dare's, deals with the undiluted blood which is drawn by capillarity into a very thin chamber of definite thickness and which is compared with a colored prism by modified light from a candle 22.50
- A-2150 Haemoglobinometer, Talquist's, is a simple bedside test and adapted to the use of every physician on account of the ease and accuracy with which the test may be made, and its inexpensiveness. It consists of 50 pages of strips of absorbent paper with scale attached showing tints of haemoglobin from 10 per cent and 100 per cent, bound in book form..... 1.75

DIAGNOSTIC

VICTOR No. 2
CENTRIFUGE

This Centrifuge has a wide range of usefulness, is of heavy construction, is capable of operating at a higher speed, will handle larger volumes, and is equipped with a controlling rheostat which permits of the Centrifuge being operated at three different speeds.

This Centrifuge is operable on both direct and alternating currents and is so designed that it may be used with or without a dome, as preferred.

The maximum speed, together with the staunchness of construction of this Centrifuge, permits of the use of either a 2 tube 15 c. c. head, a 4 tube 15 c. c. head, a haematokrit, or a 2 tube 50 c. c. head. For larger capacities, one of the larger centrifuges is recommended.

This machine is completely incased in an iron jacket, and heavily coated with black enamel, which is impervious to both acids and alkalis. The protective dome is of heavy spun copper, a natural finish, and may be easily removed from the Centrifuge for cleaning, etc.

- A-2181 Victor No. 2 Centrifuge, arranged for both 110 volt direct and alternating currents, complete with three point controlling rheostat and attachment cord and plug, but not including revolving head, metal tubes, glass tubes or protective dome.....\$32.00
- A-2182 Victor No. 2 Centrifuge, arranged for both 220 volt direct and alternating currents, complete as listed above..... 34.75

VICTOR No. 4 CENTRIFUGE

This is a more powerful machine than the "No. 3" or "No. 2" Centrifuges, and has a wider range of usefulness.

The essential differences between this model and those previously described are:

- Wider range of speed.
- Operates at five different speeds.
- Heavier construction.
- Protective dome an integral part of Centrifuge, and of same construction as balance of machine.
- Motor is entirely shut off from Centrifuge chamber, which eliminates any danger of possible combustion if highly inflammable ingredients are used.

Design permits of use of greater variety of multiple tube heads and of greater speed than the smaller Centrifuges.

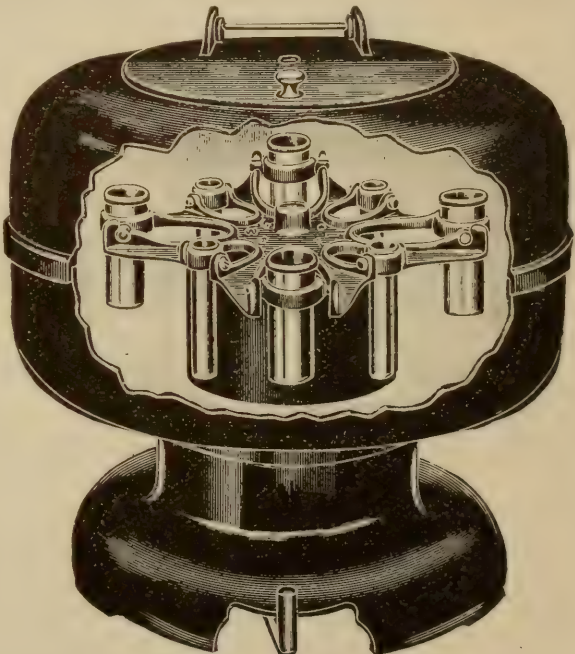

This Centrifuge, in common with all other Victor Centrifuges, is arranged for operation on both direct and alternating currents.

- A-2178 Victor No. 4 Centrifuge, arranged for both 110 volt direct and alternating currents, equipped with five point speed control and attachment cord and plug, but not including revolving head, trunnion rings, metal tubes or glass tubes.....\$56.00
- A-2179 Victor No. 4 Centrifuge, arranged for both 220 volt direct and alternating currents, as listed above..... 59.00

VICTOR PROTECTIVE DOME

- A-2192 Victor Protective Dome for No. 2 Victor Centrifuge..... 9.65

NOTE: Circulars giving complete detailed information on Victor Electric Centrifuges mailed on request.
Special catalogue showing complete line sent on request.

DIAGNOSTIC

ELECTRIC CENTRIFUGES

For the General Practitioner's Laboratory Equipment

These Centrifuges have been in use throughout the United States and Canada for many years. They are made by the International Instrument Company, whose reputation for substantial, simple and satisfactory centrifuge construction has been firmly established.

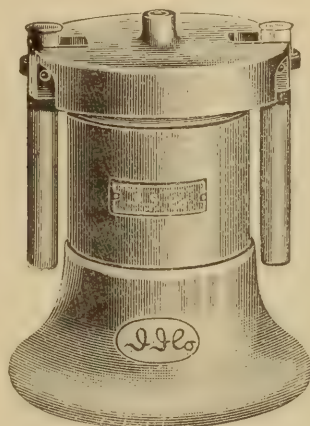

The trade mark  Guarantees satisfaction.

Urine Should Be Tested

Furnished for—

- 110 Volt Direct Current.
- 220 Volt Direct Current.
- 110 Volt, 60 Cy. Alt. Cur.
- 220 Volt, 60 Cy. Alt. Cur.

In ordering, the exact description of electric current should be stated as above.

The alternating current machines may be used and are regularly furnished without speed control rheostats. The direct current machines are furnished with rheostats.

Mothers' Milk Should Be Tested

CENTRIFUGES AND ACCESSORIES

A-2230	Hand Centrifuge, complete with one graduated and one plain 15 cc. tube.	\$ 8.00
*A-2235	Hand Centrifuge, double speed, complete with one graduated and one plain 15 cc. tube, two sputum tubes, one Daland's Haematokrit and pipette for filling tubes.	12.00
A-2240	Water Power Centrifuge, complete with one graduated and one plain 15 cc. tube.	12.00
A-2242	Blood Lancet, automatic, light pattern	2.00
A-2243	Blood Lancet, automatic	2.25
A-2245	Blood Lancet, Boldt's	2.25
A-2250	Blood Lancet, Moore's	2.25
A-2252	Blood Lancet, plain reversible	.50
A-2253	Blood Needle, McRae's, for Wassermann test, with test tube.	1.25
*A-2254	Blood Pipette, Manley's, complete with needle and rubber tubings, 10 cc., 75c; 20 cc., 85c; 30 cc.	1.00
A-2256	Blood Pipette, automatic, for filling blood tubes.	.75
*A-2260	Centrifuge Clamp, for attaching the centrifuge to the table.	.50
*A-2265	Centrifuge Four-Tube Attachment. This attachment is used in board of health and other laboratories for milk analysis, etc., as four tests can be made at one time.	5.00
*A-2270	Centrifuge Guard for Haematokrit. This attachment consists of a metal shield which fits over the haematokrit, so that the revolving parts are entirely closed.	2.00
A-2272	Centrifuge, Haematokrit, Daland's	3.50
A-2275	Centrifuge Milk Tubes. These tubes are used for milk analysis in place of the regular sedimentation tubes and are graduated to give percentage readings of fats in milk according to the Leffman-Beam or Babcock methods. Very useful for human as well as cow's milk analysis	.75
*A-2280	Centrifuge Percentage Tubes. For the haematokrit. With accurate lumen, lens-edge to magnify column of blood and the graduations, and graduated in millimeters from 0 to 100.	.60
A-2285	Centrifuge Pipette. For filling milk tubes. Graduated to 1 cc.	.20
A-2290	Centrifuge Pipette. For filling haematokrit tubes	.40
A-2295	Centrifuge Sedimentation Tubes. Graduated in 1-10 cc. to 10 cc., with conical end to aid in reading small deposits.	.40
A-2300	Centrifuge Sedimentation Tubes. Ungraduated. For collecting sediments for microscopical examination.	.20
*A-2305	Centrifuge Shield Tubes. Of aluminum. These shields protect the glass sedimentation tubes. They are regularly furnished with the centrifuge, but are listed extra for renewal in case of damage.	.40
*A-2310	Centrifuge Sputum Tubes. For use in haematokrit frame. Same shape as percentage tubes. Ungraduated.	.25
A-2311	Milk Bottle, Babcock's, for 10 per cent fat, per dozen	3.60
A-2312	Stopper, Bunnell's, for blood pipette. Used for closing the pipette after taking blood at bedside. Where the pipette must be carried from the bedside to the laboratory for counting this little stopper will be found practical and useful	.50

HYPODERMIC SYRINGES

**A-2926 THE NURSE'S SUB-Q**

This set consists of a 30 minim Glass Hypodermic Sub-Q Syringe with graduations that are accurate and unmistakably reliable; 2 Sub-Q needles and wire tube. Like all of the well-known and popular Sub-Q's, the Syringe is made of glass, thoroughly annealed, that will stand sterilization by the most rigid tests. The whole outfit has been termed simple, durable and dependable by many leading hospital superintendents throughout the United States. It is the outfit that is always ready—always satisfactory. Complete in beautiful ivory white Sub-Q-Loid case.....\$1.50

A-2926—2927

THE TAG "RECORD" SYRINGE

MADE IN U. S. A.

The Tag "Record" Syringe is the product of American manufacture, and represents the highest quality in construction that can be produced by the most skillful workmen, coupled with modern factory management.

The entire instrument consists only of five pieces. The metal plunger is accurately fitted to the ground glass barrel, so that no washers are required. The structural rigidity is not sacrificed. It is as easy to reassemble as it is to take apart. Sterilized by boiling.

MATCHLESS ALL-METAL SYRINGE

Aspirator Attachment

The all-metal "Matchless" Syringe is a strong, powerful, perfect-working and easily manipulated instrument. Superior in every way to rubber-packed syringes. Filled with non-corrosive plunger. May be sterilized in boiling water without injury. After disinfection, a little vaseline applied to the plunger restores it to normally perfect and easy operation. Made in eight sizes and adapted to many uses. Furnished with a choice of tips as noted below.

PRICE LIST OF MATCHLESS SYRINGES

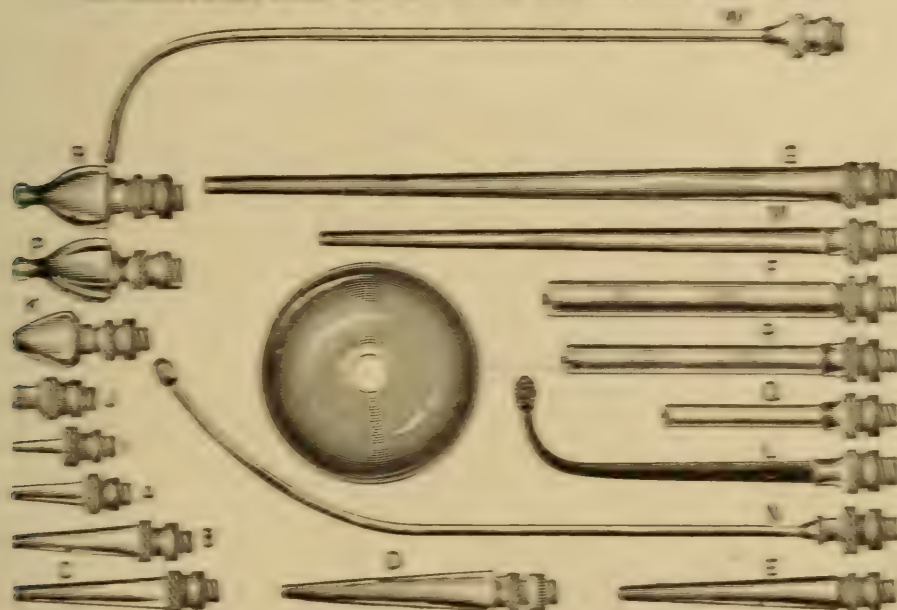

A-1144	Matchless Syringe, 1/4 ounce	each	\$1.50
A-1147	Matchless Syringe, 1/2 ounce	each	1.75
A-1148	Matchless Syringe, 1 ounce	each	1.80
A-1149	Matchless Syringe, 1 1/2 ounces	each	2.75
A-1151	Matchless Syringe, 2 ounces	each	2.25
A-1152	Matchless Syringe, 4 ounces	each	3.00
A-1153	Matchless Syringe, 4 ounces	each	3.75
A-1154	Matchless Syringe, 8 ounces	each	4.75

Any five of the following tips are included: A, B, C, D, E, H, I, K, L, Q, R, S, T, U, or any of these: F, G, M, N, or P.

ASPIRATING ATTACHMENT

The "Matchless" equipped with Peck's Valve, becomes a very efficient aspirating device. Peck's Valve, each, \$1.00.

THE CLARK OPEN SYSTEM

(NITROUS OXID AND OXYGEN)

With Ether Sequence—Rebreathing—Warming

Prolonged Deep Anaesthesia
for Major Surgery, with the

A-124 CLARK NEW MODEL GAS OUTFIT

Safe and Economical

The Original Clark Simple
System—one handle control—
thorough mixing chamber—full
volume and free flow.

Built on the Standardized
Unit Plan. The units consist
of Ether-Rebreathing and
Warmer attachments, either of
which, or all in combination,
can be added, as required.

Automatically Regulated

The practical and scientific
outfit, the result of 23 years'
experience. Send for literature.

Clark New Model Gas Outfit with Automatic
Regulators, Ether-Rebreathing and Warmer At-
tachments.

THE CLARK OPEN SYSTEM

(NITROUS OXID AND OXYGEN)

Light or Deep Analgesia for Obstetrics and Minor Surgery, with the
B-126 BABY CLARK GAS OUTFIT

Baby Clark

The New Portable Outfit for administering Nitrous Oxid and Oxygen, embodying the Original Clark Simple System for producing Prolonged Analgesia for Painless Childbirth, Surgical Dressings and minor operations of all kinds.

Baby Clark in Case

The Baby Clark is a condensed form of the larger Standard Outfit, with the same Thorough Mixing Chamber and simple One-Handle Control.

The Automatic Feeder (indicated by the arrow) is a new and original Clark creation for obstetrics.

**SPECIAL
FEATURES**

{
Simplicity
One-Handle Control
Thorough Mixing Chamber
One Bag for Nitrous Oxid
One Bag for Oxygen
Automatic Feeder

The Standard Surgical Attachments, consisting of Ether-Rebreathing and Warmer, as illustrated on the standard outfit on opposite page, are applicable to the Baby Clark. Send for literature.

The Autogenor

With washbottle, tube and mouthpiece, as it substitutes the oxygen tank, yielding pure oxygen at 2½c per gallon.

ANAESTHETIC

Oxygen Generator

"AUTOGENOR"

An automatic pressure generator of medicinally pure oxygen produced by the simple reaction of fused sodium peroxide (Oxone) and water.

An economic, highly efficient and extremely practical substitute of the oxygen tank, portable in carrying case.

The average cost of pure oxygen produced in this manner is 2½c per gal. There is no loss by leakage or deterioration connected with the process.

- | | | |
|-------|---|---------|
| B-116 | Price complete with inhalation attachment in carrying case and Oxone charges to make 500 gals. pure oxygen..... | \$45.00 |
| B-117 | The same with Meltzer device for resuscitation ("Life Saving Autogenor")..... | 75.00 |
| B-118 | The same with three-bottle vapor inhaler and mask ("Anesthetic Autogenor").. | 65.00 |

"GWATHMEY-GAS-OXYGEN-APPARATUS" (with Ether Attachment)

Illustration shows the portable outfit complete with carrying case, holding three small tanks. Same outfit also on extra stand for hospital use as well as in large size, holding two large gas and two large oxygen cylinders.

The regular outfit includes surgical inhaler, ether attachment, mercury gauge for intratracheal insufflation, yoke couplings and alcohol heater.

It is particularly noteworthy that with this new "Gwathmey Apparatus" reducing valves are substituted by simple needle valves of special construction, known as "Foregger Control Valves."

Lennox Nitrous Oxid

99.70%
PURE
 N_2O

THE Induction of Anesthesia with Nitrous Oxid and Oxygen followed by ether, known as the sequence method—is recognized by the most proficient anesthetists, to be **the** method of choice for ether anesthesia, because Nitrous Oxid produces unconsciousness in from 4 to 10 breaths without odor, suffocation, excitement, or other unpleasantness after which ether may be readily administered. Nitrous Oxid induction saves much time, is pleasant for the patient, and minimizes the flow of mucous with its consequences. This is easily and successfully accomplished, provided the anesthetist demands

LENNOX NITROUS OXID

which is chemically pure and manufactured for medicinal purposes only.

When ordering from your supply house insist upon LENNOX NITROUS OXID. If it cannot be procured, address us direct.

LOCAL ANAESTHESIA

"GEBAUER'S" ETHYL CHLORIDE

LOCAL AND GENERAL ANAESTHESIA ETHYL CHLORIDE (GEBAUER'S)

The most improved and economical tube for the administration of
Ethyl Chloride on the market

The most economical: Because it sprays the liquid in the form of a vaporized stream, thereby hastening evaporation and consequent anesthesia, using 1-10 the liquid used by other tubes. Because the Ethyl Chloride is put up in a metal tube that will not leak or clog and the liquid is guaranteed to maintain its purity indefinitely.

The most improved: Because with the flexible spraying nozzle parts of the mouth, ear, nose and throat can be anaesthetized which cannot be reached with any other Ethyl Chloride tube. Because with the graduated dropper the Ethyl Chloride for general anesthesia by the drop method can be accurately measured and administered without inconvenience or waste, in the form of drops or a jet stream as desired. Sent anywhere upon receipt of price; safe delivery guaranteed.

B- 97	Gebauer's Ethyl Chloride, 40 grm. tube with ordinary spraying nozzle..	\$ 1.10
B- 98	Gebauer's Ethyl Chloride, 100 cc. tube with ordinary spraying nozzle..	1.75
B- 99	Gebauer's Flexible Spraying Nozzle alone.....	.50
B- 95	Gebauer's Inhaler, for Ethyl Chloride by the drop method.....	5.00

The flexible nozzle and the graduated dropper will fit either size tube and can be used indefinitely.

HASLAM'S AMERICAN OPERATING KNIVES
Illustrations shown full size

GENERAL OPERATING

KNIVES

Our knives include only the best American and English makes. They are made of the finest grained English tool steel (Jessop's), and are hand forged throughout. Each knife is tempered with the utmost care, and is ground, polished and honed by the most expert workmen.

We guarantee each knife to be perfect in every respect. Should any defect in our knives be shown after use we stand ready to replace without charge.

We would also suggest to our patrons that surgical knives should be sent to your regular instrument dealer when in need of re-grinding, as local mechanics generally are not familiar with the methods of grinding and polishing necessary to obtain the best results.

ENGLISH OPERATING KNIVES

*B-155 Weiss', genuine, furnished only in blades Nos. 52 to 66, each. \$2.00

THE SPARK'S SELF RETAINING RETRACTORS

B-721	Spark's, self retaining, abdominal.....	4.50
B-722	Spark's, self retaining, abdominal, with extra blade.....	5.50
B-723	Spark's, self retaining, appendectomy.....	4.00

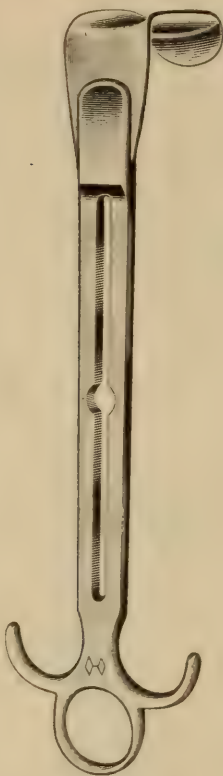

These retractors have been designed and perfected under the name of Spark's. They are guaranteed to be of the very best material and construction.

Each instrument is self retaining, is very simple, and consists of only two pieces of sheet steel, heavily plated over copper. The two parts can be instantly dismounted and folded into small space. The abdominal retractor has an opening of six inches and the appendectomy retractor has an opening of three and a half inches.

BONE CLAMPS AND HOLDERS

*B-1382	Bone Clamp, Parkhill's, silveroid, 3 sizes, each.....	\$ 7.50
B-1388	Bone Holder, Lambert-Lowman's, improved.....	7.50
B-1384	Hone Holder, Lowman's, 2 sizes, each.....	7.50
It holds the fracture in closest apposition and, at the same time, holds firmly the plate awaiting the introduction of the screws. The instrument possesses the advantages of being easily applied, of destroying but very little of the periosteum, and of disturbing but little the surrounding tissues.		
*B-1402	Bone Holder, Schroeder's.....	37.50
For holding and bringing into alignment fractured bones of the extremities, for the purpose of applying bone plates, bone splints of absorbable material or human bone grafts.		
B-1403	Bone Holding Clamp, Magnusson's.....	15.00
This clamp is especially adapted for holding fractured ends of bones, while inserting ivory plates or bone grafts. Has adjustable jaw, therefore will accommodate any of the long bones.		
B-1404	Bone Holder, Parham and Martin's.....	7.50
Extra metal bands.....		.35
This device is especially useful in the treatment of oblique fractures, where the bones have a tendency to over-ride. The metal band is passed around the bone, the knurled screw turned and the band drawn as tight as desired, after which it is bent, turned and cut off.		
B-1406	Turnbuckle, Gerster's (price does not include bone holders).....	4.75
B-1383	Turnbuckle, Haslam's (price does not include bone holders).....	4.75
Designed for the purpose of bringing into apposition over-riding bones; used in connection with two pairs of Lowman's clamps.

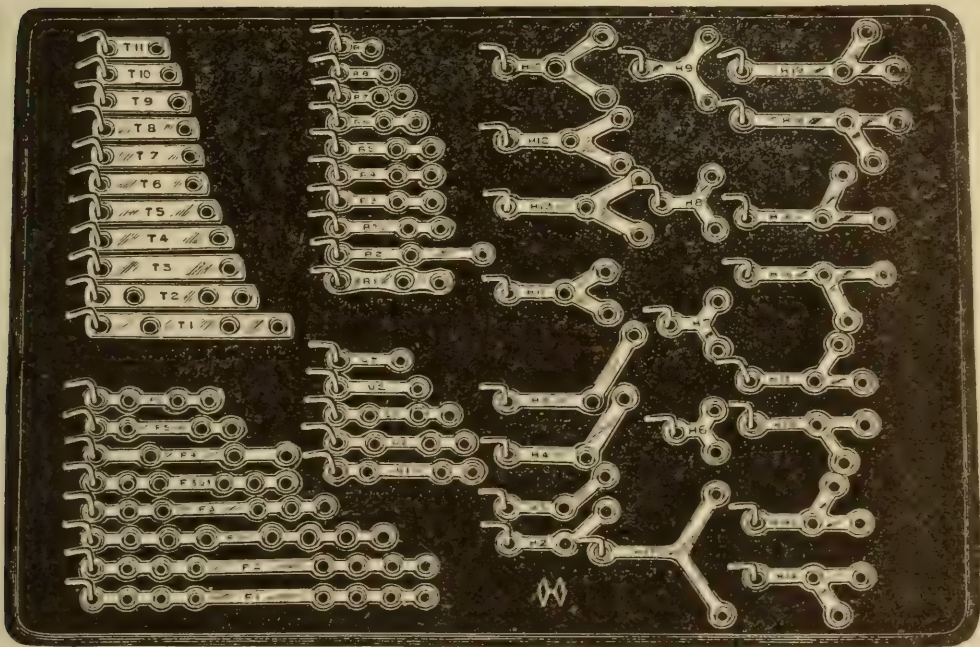

BONE INSTRUMENTS

DR. CHAS. GEIGER'S ELECTRO-OPERATIVE SURGICAL BONE ENGINE AND
ACCESSORIES

Used and Recommended by Dr. John B. Murphy, Dr. Fred H. Albee and Drs. W. T.
and C. H. Mayo

For further details and price, write Dr. Charles Geiger, St. Joseph, Mo., U. S. A.

BONE INSTRUMENTS

DR. CHARLES GEIGER'S ELECTRO-OPERATIVE SURGICAL BONE ENGINE AND
ACCESSORIES

This set of instruments is especially made for bone transplantations, dowel making and cranial work. Water is not required to keep the cutters from burning the bone while using the Geiger Machine, because of the reduced speed, **250 revolutions per minute.**

Points of Superiority

A few of the many advantages, not found in other motor bone engines, are: 1. Slow speed. 2. Great power. 3. Simplicity of chuck. 4. The firmness with which it can be held. 5. Motor is sterilizable by dry heat.

NEEDLE HOLDERS

B-1557 Brown's\$4.50

One of the most simple and durable needle holders made. It has no ratchet to get out of order; will not tear rubber gloves, catch thread or ligature; will hold any size of needle firmly; will not break needles; is perfectly noiseless; can be used with either hand; can be used as a needle holder or a needle forcep, which is a great advantage and saving of time, as three-fourths of the stitches can be taken better and much faster without using the catch.

RICHTER NEEDLE HOLDERS

The Richter Needle Holders have attained, since their introduction several years ago, a popularity accorded to no other instrument of similar character. They have given the most satisfactory results wherever used.

The construction of the jaw of this instrument is shown in Fig. A, and the method of grasping and holding the needle in Fig. B. In a later construction, a grasping point has been added to the regular Richter jaw (see B-1630), in order to facilitate the grasping of the smallest needle point when exposed through the tissue. The jaws will hold any style of needle perfectly, whether round, flat or square. Every holder is forged by hand and carefully tempered.

An improved catch has also been added to the instrument as originally made (see B-1365). This catch, or rather release catch, permits the releasing of the needle at any point on the catch, in this manner eliminating the danger of breaking the needle by undue pressure when releasing.

GENERAL OPERATING—NEEDLES

Fig. A

Fig. B

Fig. C

Fig. D

In order that surgeons may order intelligently we illustrate above the various eyes designated in price list, and used in our needle construction.

Fig. A. Plain, oval eye.

Fig. B. Plain, square eye.

Fig. C. Split or Spring eye, automatic threading.

Fig. D. Cunningham eye.

In this eye (Fig. D) the needle is threaded in the ordinary manner, and then, by pulling the suture or ligature into the narrow slot of the eye it is held firmly. The idea is a good one and saves a lot of valuable time.

Our needles are all made of the best tempered steel, with eyes as large as the body or shank of the needle will carry, facilitating in a great degree quick threading with a consequent saving of time.

GENERAL OPERATING

**RICHTER'S MAGAZINE WOUND CLIP FORCEPS****1914 Model. Patent Pending.**

This last model of the Richter Magazine Wound Clip Forceps is superior to all others, in that its jaws are constructed in such a manner as to respond to the slightest pressure, permitting a gradual closing of the clips, without sudden jerk. This feature alone is a great advance in instruments designed for the placement of metal sutures. In the older patterns of this type of instrument the action of the forcep jaw closed the clips too suddenly, with consequent loss of control by the operator.

The Richter Magazine Wound Clip Forceps have been supplied by the thousands to various medical and surgical corps of the countries that are still engaged in bitter strife on European battlefields, and have been used by the surgeons in the various hospitals, especially the field hospitals, with the most satisfactory results, and with a great saving of life and time.

GENERAL OPERATING

B-2274A

DESCRIPTION

The forcep is made of non-corrosive metal, highly polished and nickel plated.

Fig. 1. Shows the Forceps, $\frac{3}{4}$ size. A-A shows the Jaws about to close over a clip. B-B shows the Levers which are pressed together with thumb and index finger, in applying clips. D is the Thumb Push used to push clip into position. C is the Swivel Spring that holds the magazine of clips in position and is swung out when magazine is removed or inserted.

Fig. 2. Shows the Clip Transfer ($\frac{3}{4}$ size).

Fig. 3. Shows how Clips are removed from Wire Frame to Clip Transfer.

Fig. 4. Shows how Clips are removed from Clip Transfer to Magazine.

Fig. 5. Shows Magazine loaded, about to be inserted in Forceps.

DIRECTIONS

To Load Magazine: Slide the Clip Transfer over the clips on the wire frame, hold the clips and pull out the wire frame.

Clips are now ready to be loaded on the Magazine, which is done by pushing the wire of the Magazine through the eyes of the clips and then pulling away the Clip Transfer.

Next turn out the Swivel Spring "C" on Forceps and insert the magazine of clips into the Forceps, as shown in Fig. 5, far enough to permit the Swivel Spring to close over the wire, and Forceps are ready for the operator.

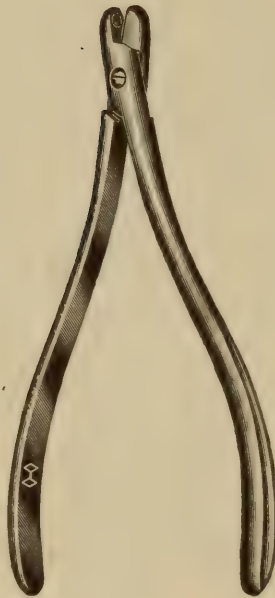

For greater convenience in carrying, we put up a neat set of suture instruments in Khaki roll, see B-2274. This outfit consists of Richter's Magazine Wound Clip Forceps, B-2274, Pressure Regulating and Removing Forceps, B-2277, Roubaix's Tissue Forceps, B-442, Clip Transfer and Wire Frames with 50 Clips.

"THOMAS" STERILE LIGATURES (In Hermetically Sealed Glass Tubes)

THOMAS STERILE CATGUT

Prepared in a well equipped laboratory conducted with the same attention to asepsis as is observed in the best operating rooms.

Raw Material—Only the finest violin quality gut used, selected with special reference to its surgical utility.

Tensile Strength—Each lot is carefully tested in a strength testing machine both before and after preparation.

Sterilization—Is accomplished by the most approved modern methods which will not injure the gut.

Bacteriological Tests—After sealing, a certain percentage of our tubes of sutures and ligatures are tested by a leading Bacteriologist of Harvard Medical School, under an incubation of fourteen days in various sterile media.

Certification—Each batch is put up under a certified number and records are open for inspection at any time.

Plain Catgut—Sizes 00, 0, 1, 2, 3, 4
(60 inches to the tube), per dozen...\$2.00

Chromicized Catgut—Sizes 00, 0, 1, 2,
3, 4 (60 inches to the tube), per
dozen 2.00

METAL KNIFE RACK FOR POCKET CASES

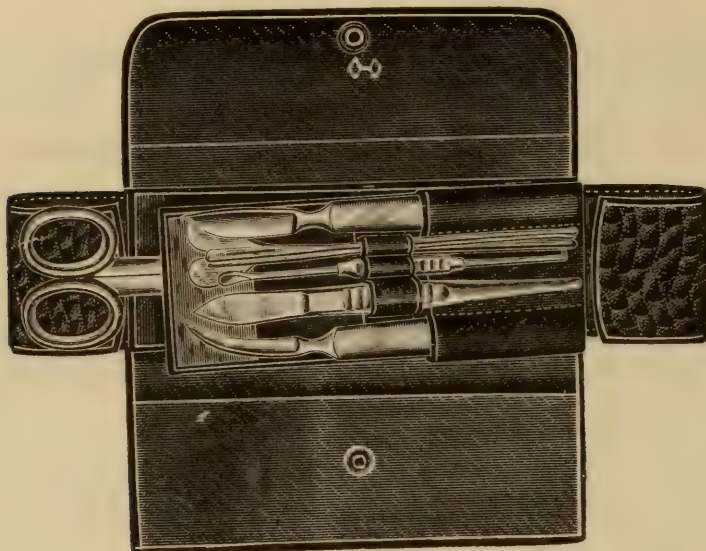

B-3020

This knife rack is made of brass, nickel plated, is made for four or six knives, has a movable rack engaging the shanks of the knife blades, permitting the knife to be raised for withdrawal from its proper sheath, also for holding the edges of the knives from the bottom of the tray should the entire rack be placed in the sterilizer for boiling. It can be supplied with any of our leather pocket cases holding four or six knives. The price of this rack should be added to that of the pocket case ordered, if wanted. Metal racks are only sold with complete pocket cases at prices quoted.

Patent Pending

B-3157. THE WHITMARSH-DOUGLASS POCKET CASE

Adopted by the U. S. Army

The new idea in Pocket Instrument Cases. The case is made up in the form of a regular card case, with three pockets; one for the reception of the metal tray holding the knives, one for the metal tray holding sundry instruments and the third for needles, silk, etc. The outer case is made of black grain leather lined with black watered silk. The metal trays are made of brass, nickel plated, and have hinged leaves which close down closely over the instruments to guard and hold them in place. The case when closed is flat and fits into the pocket without bulging. The outlines of the various instruments are etched on the bottom of the trays. There is no loss of time in returning the instruments to their proper places.

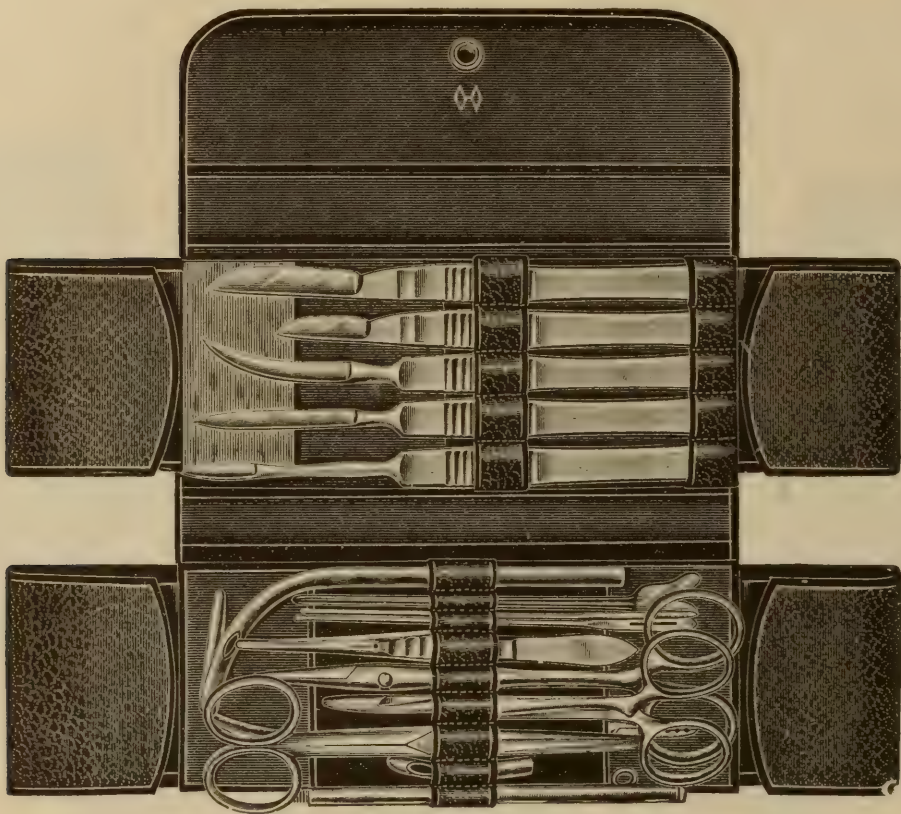

Contents: 1 scalpel, 1 curved sharp bistoury, 1 curved blunt bistoury, 1 straight sharp bistoury, 1 tenatome, 1 Pean's haemostatic forceps, 1 straight scissors, 1 spring dressing forceps, 1 groove director and tongue tie, 1 Gross' ear instrument, 1 male and female combined catheter with caustic holder, 1 pair silver probes, 1 dozen assorted needles, 1 card twisted silk.

Showing Roll in Metal Case

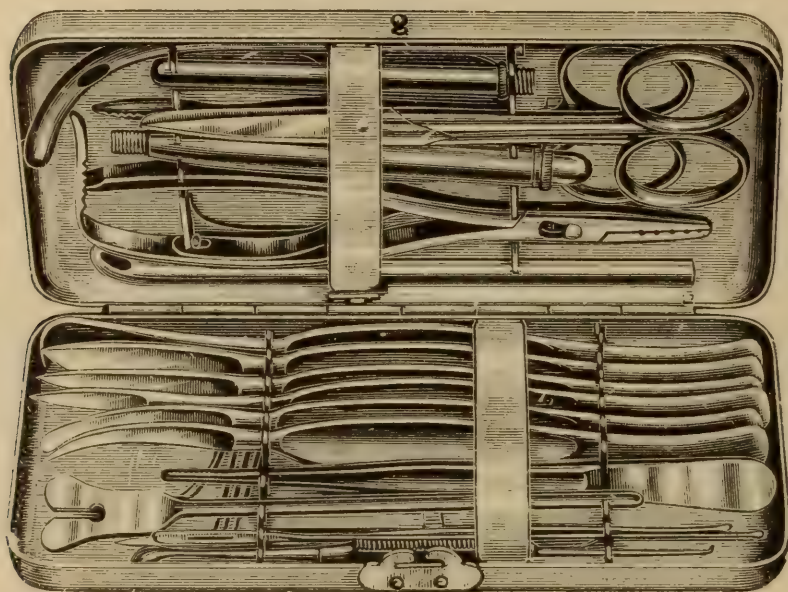

**B-3160. THE DOUGLASS POCKET CASE**

The instruments in this case are fitted in a roll of fine, white, washable twill with the outline of each instrument indelibly stamped so that each instrument can be readily returned to its proper place. The roll is carried in a fine German silver nickel plated case, $\frac{3}{4}$ inch thick. It can be carried comfortably in the hip pocket.

The contents are the same as B-3120, No. 21, illustrated on page 216.

B-3209. TRAINING SCHOOL NURSE SET

Contents: 1 probe, 1 director and tongue tie, 1 combined hypodermic syringe with solid gold needle and a one minute Clinical Thermometer, 1 dressing forceps, 1 bandage scissors, 1 straight scissors, 1 bath thermometer in plated case, 1 haemostatic forceps, and 1 baby scale, put up in very neat tan canvas of special quality.
Price\$7.00

B-3209

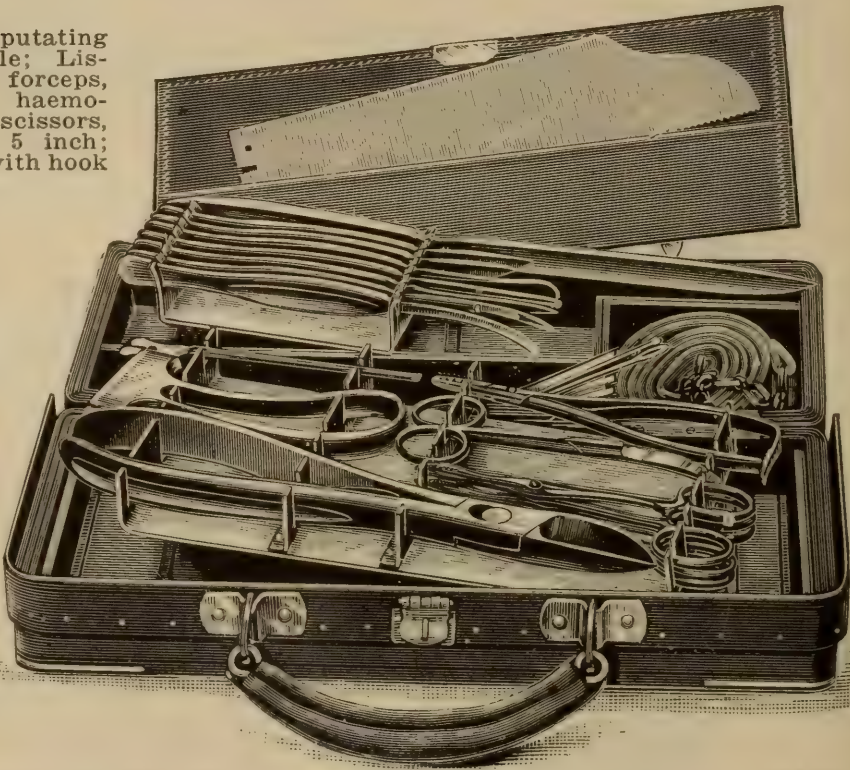

B-3215. COMPACT OPERATING SET No. 12

Contents: Large amputating saw, removable handle; Liston's 8½ inch bone forceps, with spring; 3 Pean's haemostatic forceps, curved scissors, Keen's needle holder, 5 inch; Esmarch's tourniquet with hook and chain, amputating knife, 7 metal handle operating knives, assorted blades to suit; flat end director, pair of probes, needles and silk.

This case is extremely compact and well arranged. Every instrument is perfectly aseptic, and mounted in two metal removable racks.

The case is handsome and durable with metal corners and has a comfortable handle.

The racks are either nickel plated or aluminum, as desired, the latter being considerably lighter.

- B-3215 Compact Operating Set No. 12\$33.00
B-3220 Compact Operating Set No. 14. Same as above with one Galt's trephine and one trephining elevator and raspatory added..... 37.00

GENERAL OPERATING

B-3225. NEW COMPACT OPERATING SET No. 15

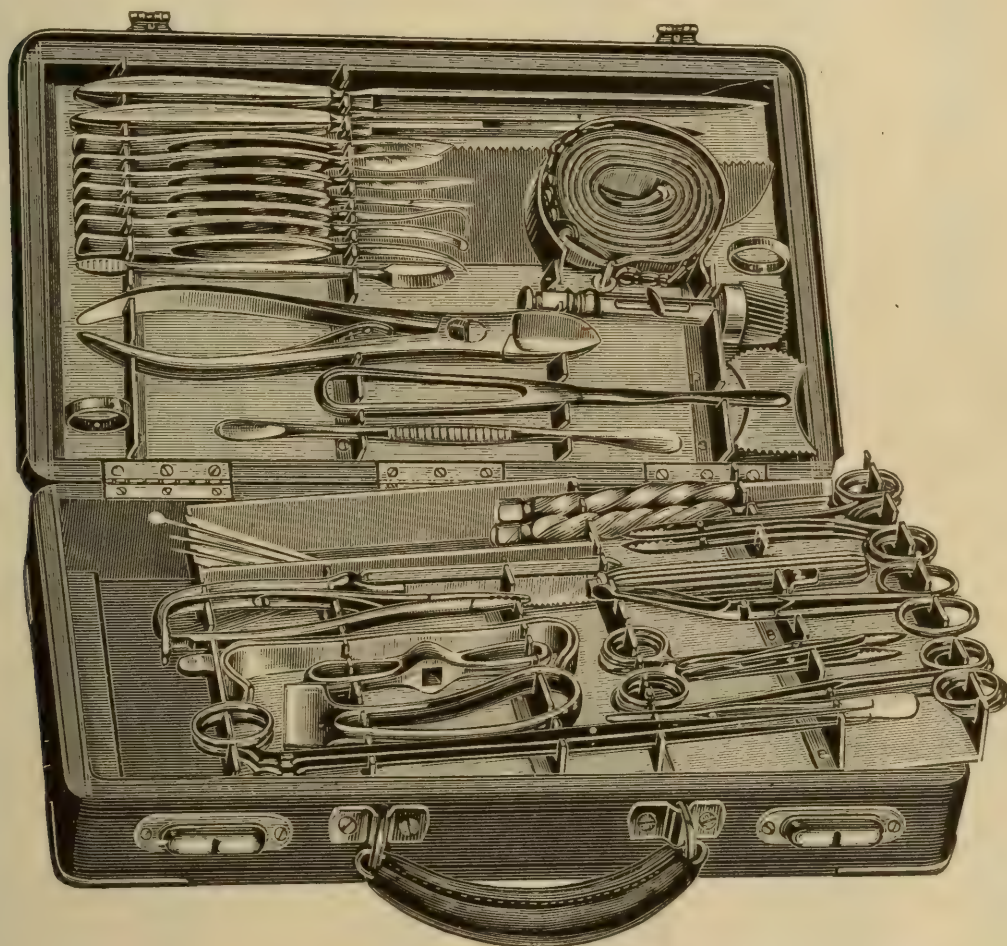

Contents: Large amputating saw, removable handle; Liston's bone forceps, 8½ inches, with spring; 3 Pean's haemostatic forceps, curved scissors, Richter's needle holder, Esmarch's tourniquet with hook and chain, amputating knife, 7 fine handle operating knives, assorted blades to suit; flat end director, 2 probes, needles and silk.

All the Knives are Superior Quality, Hand-Forged and Warranted.

This case is perfectly aseptic and very compact. All the instruments are on a single metal rack, making a broad case in which all the instruments are exposed when case is opened. The case measures 11x8½x1¾ inches.

The case is handsome and durable, has a comfortable handle and has metal corners.

GENERAL OPERATING

"KNUKLFIT" SURGEONS' RUBBER GLOVES**(The Glove with the Hump)**

Patented.

Endorsed by leading surgeons everywhere. Fully guaranteed by the manufacturer

The "Knuklfít" Glove eliminates tension on finger joints and cramping of fingers and hands. Permits that sensitive, cuticle-like touch that is absolutely necessary in operative work.

**THE FACTS ARE**

THAT the knuckles are the largest part of the fingers.

THAT unless there is a bulge in the glove fingers at these points, free action of the fingers will be impaired.

THAT the plain fingered glove will bind across the knuckles and cause tension on the finger tips.

THAT tension on the finger tips will impair that sensitive cuticle touch that is absolutely imperative in operative work.

THAT the gloves are made of the finest quality of Para rubber, by our own special process, and under our own personal supervision.

All gloves fully guaranteed by the manufacturer.

INFORMATION

We also make the plain finger rubber glove of the same quality of rubber as the "KNUKLFIT," and with the same care and supervision.

PRICES

A-4000	"Knuklfít" Rubber Gloves, medium weight, smooth finish, per pair, \$0.75;

SAS OPERATING GOWNS, APRONS, CAPS, ETC.

SAS Gowns are carefully made from fine grade material of not too heavy weight. The seams are lapped. They are made with yoke, and well shaped. They have a pocket with partitions suitable for holding instruments. This is the best grade of Gown, and it is recommended for durability and its good appearance.

A white bag is supplied with each Gown for protecting it against contamination until used, and it also makes a very convenient package for carrying in satchel.

These Gowns are made in the following lengths and chest measurements. SPECIAL SIZES OF GOWNS MADE TO ORDER.

Length.....	50 in.	50 in.	52 in.	54 in.	56 in.	58 in.	60 in.
Chest.....	38 in.	40 in.	42 in.	44 in.	46 in.	48 in.	48 in.

No. 100 Loring Ophthalmoscope. Has 19 lenses held by double-disk locking device; rectangular tilting mirror in either plano or concave; polished hard rubber handle and condenser lens. Price.....\$6.00

No. 125 Morton Ophthalmoscope. Improved model. Has a train of 29 lenses with 4 supplementary lenses, all held by metal fastening; a small and a large concave and a large plano mirror all adjustably mounted. Handle contains pupilometer and color test. Price.....\$27.50

No. 144 Electric Morton Ophthalmoscope. Same as No. 125, with improved electric lighting attachment having DeZeng's metal mirror of Marple type; Dennett's adjustable lamp and Jumbo Handle Battery. Price, complete in case with two lamps.....\$40.00

No. 168 Electric Ziegler Ophthalmoscope. Has two independent disks giving a total of 78 foci; DeZeng's metal mirror of Marple type; Dennett's adjustable lamp, and Jumbo Handle Battery. Price, complete in case with two lamps.....\$25.00

No. 185 Electric Loring Ophthalmoscope. Has 19 lenses held by double-disk locking device; DeZeng's metal mirror of Marple type; Dennett's adjustable lamp, and Jumbo Handle Battery. Price, complete in case with two lamps.....\$20.00

No. 200 Thorington Retinoscope. Has plano or concave mirror $\frac{3}{4}$, 1, $1\frac{1}{4}$ or $1\frac{1}{2}$ inches in diameter, with DeZeng's detachable crown mounting. Price, each.....\$1.00

No. 280 Electric DeZeng Retinoscope. Has plano glass mirror; special hairpin filament lamps; illuminated Fixation Letters, and Jumbo Handle Battery. Price, complete in case with two lamps.....\$15.00

No. 306 Socket Current Controller. Screws into socket of electric fixture for D. or A. C. current of 110 to 115 volts. Has DeZeng's compressible contact; adjustable locking device; is graduated to show voltage delivered; is properly insulated; has heavy resistance coil; increased ventilation, and is furnished complete with resistance lamp. Price.....\$12.50

No. 375 Wurdemann's Transilluminator. For detection of foreign bodies, the study of the iris, the circumcorneal zone in glaucoma, and intraocular tumors. Is about the size of a fountain pen, is light, convenient to use has a special lens-tipped lamp and cord attached handle. Price, with two lamps...\$9.00

No. 420 Adjustable Instrument Table. Has metal base, quick hand-wheel screw adjustment and is finished in heavy baked white enamel. Has mahogany finished top 15x24 in. with chart drawer. Will remain in any position and cannot shake. Price.....\$22.00

No. 450 McHardy Perimeter. Is a new model and is fully automatic throughout. The frame, arc, dial and all mechanical parts are made of metal and are in perfect working balance. The instrument is beautifully designed and handsomely finished. Price.....\$60.00

No. 460 Standard Registering Perimeter. Combines the valuable points of the Landolt and Priestly Smith Perimeters. The frame proper is all in one piece, and nothing short of breakage can impair its accuracy. Has four-wheel object carrier, with 6 interchangeable test objects and separate handle. Price.....\$20.00

No. 475 Electric McHardy Perimeter. Is the same instrument as No. 450, with the addition of Dr. Nelson Black's translucent color test. The lamps in the fixation point and object carrier are both on the same circuit and may be controlled by one rheostat. Price, with 4 lamps.....\$100.00

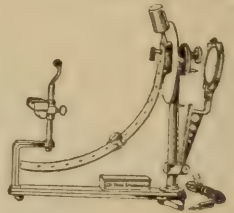

No. 600 Asbestos Light Screen. Has ventilated, covered top; iris diaphragm, and measures $4\frac{1}{2}$ in. high by $2\frac{1}{2}$ in. inside diameter. Price.....\$3.00

No. 625 DeZeng's Dark Room Lantern. For muscle work. Has Ziegler's Greek cross, Thorington's iris diaphragm and a white translucent disk mounted on an asbestos tube having ventilated caps. Complete, with light floor stand, cord conductors, lamp socket and 25-watt frosted lamp. Price.....\$13.50

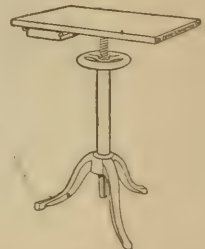

No. 810 Improved Schematic Eye. Has DeZeng's variable pupil and angle attachment, is accurately graduated for the varying degrees of ametropia, is made entirely of metal, and has normal fundus in color mounted radial, with center of the eye. Price...\$4.00

No. 815 Portable Schematic Eye. Same as No. 810, but has short stationary base and does not contain the variable pupil or angle attachments. Price...\$2.25

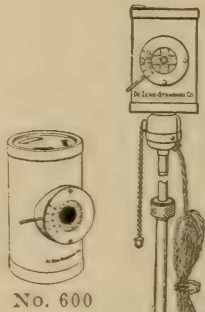

No. 971 Combination Ophthalmoscope-Retinoscope Set. Contains complete Electric Ophthalmoscope No. 185 and Electric Retinoscope Top of No. 280, with two lamps for each instrument. Price.....\$28.00

No. 1114

No. 560 Phorometer-Trial Frame. Is a compact combination of a three-cell gear-driven trial frame with all adjustments, a DeZeng universal double rotary prism unit of 30 D. set in a fully graduated mount on each side; a Maddox multiple white rod set in a graduated mount on each side; a Stevens phorometer with spirit level, and an adjustable near point test. Price, complete with wall bracket, floor stand or chair fixture.....\$85.00

No. 570 Phoro-Optometer. Same as No. 560 described above, with a multiple series of covered spherical lens-carrying disks mounted on each side. The lens are 1 inch in diameter, are centered, accurate to focus, and give a total of 214 numbers on each side. Price, complete with wall bracket, floor stand or chair fixture.....\$145.00

No. 790 Souters Tonometer. Is about the size and weight of a fountain pen and is applied horizontally while patient is in upright position. The scale represents pressures in millimeters of mercury. Price..\$18.00

No. 1032 Electric Ootoscope. For diagnosis, asperating, operating and massage. The head can be opened or closed as desired without impairing the illumination or the view. It has three specula in different sizes, a rubber compression bulb and Jumbo Handle Battery. Price, complete in case with two lamps..\$19.50

No. 1040 Mastoid Transilluminator. This attachment for the Ootoscope, when used in the dark, will transilluminate the mastoid. Price, with 2 lamps..\$6.00

No. 1042 Nasal Speculum. For use with the Ootoscope. Is most serviceable in nose work. Price..\$2.50

No. 1048 Surgical Ear Instrument Set. Contains Applicator, Curette, Spear Point and Knife, with interchangeable handle in compact holder and case. Price, complete.....\$6.50

No. 1114 Combination Set of Rotary Prism and Rotary Cross Cylinder. Contains the Risley Double Rotary Prism Unit No. 1105, which gives all prism equivalents from zero to 30 D., and DeZeng's Rotary Cross Cylinder No. 1110, which has a range of from zero to 6 D. 1½ inch size only. Price, in case..\$27.50

***No. 1210 DeZeng's Tongue Depressor.** This instrument gives a uniformly brilliant illumination, obtained from a cool lamp located at the base of the blade. Price, with two lamps.....\$7.00

***No. 1230 Laryngoscope and Transilluminator.** Has two interchangeable plano mirrors, ⅝ in. and ¾ in. in diameter, which may be rotated about the lamp. When used as a transilluminator the mirror is removed and the cool lamp placed in direct contact with the object. Price, with two lamps.....\$10.00

No. 1286 Diagnostic Set. Contains complete Electric Ophthalmoscope No. 1255, Top of Electric Retinoscope No. 280, Head of Electric Ootoscope No. 1032, Laryngoscope and Transilluminator No. 1230, DeZeng's Tongue Depressor No. 1210, Holmes' Naso-Pharyngoscope No. 1500, Cord Adapter, No. 1095, and Pratt's Laryngeal Speculum No. 1400, with two lamps for each instrument. Price, complete in case.....\$105.00

***No. 1400 Pratt's Laryngeal Speculum.** Adult size. The lamp is located in the center of the blade, which position gives perfect illumination and prevents all internal reflexes. Price, with two lamps.....\$10.00

***No. 1402 Pratt's Laryngeal Speculum.** Same as No. 1400, but Infant size. Price, with two lamps..\$10.00

***No. 1500 Holmes' Naso-Pharyngoscope.** Gives a very large and perfectly defined field of view under a brilliant illumination with upright image. Has external rotatable snap contact with circuit breaker and detachable cords. It is furnished complete in cylindrical metal case. Price, with two lamps..\$38.50

TRANSILLUMINATOR

C-77	Transilluminator, E. S. I. Co.'s, ocular.....	net	4.00
------	---	-----	------

This instrument, originally suggested by Dr. R. D. Gibson, of Youngstown, Ohio, for the purpose of transillumination of the eye through the lids and sclera, is simple in construction and effective in operation, consisting in brief of a small hooded condenser lamp, the light from which passes through a short enclosed glass rod, about 5 mm. in diameter, to the tip of the instrument, which, being placed against the lid or sclera, gives, in the normal eye, brilliant illumination in the pupil and a well marked light-ring around the iris.

The instrument has the general size and shape of a fountain pen, has a 4-volt lamp and may be lighted on battery, socket current controller, wall plate or transformer. To obtain the most satisfactory results it should be used in a well darkened room.

EYE INSTRUMENTS

C-749. VICTOR No. 3 EYE MAGNET

This magnet is 5¼ inches long without tip, and 1¼ inches in diameter; we supply with it 4 gold-plated tips and an attachment plug and cord. The Victor No. 3 is by far the strongest hand or portable magnet on the market; it is completely covered with polished hard rubber, the case is leather and plush lined.

Price for 110 Volt direct current, or for batteries as shown in case.....\$15.00
 Price arranged for 220 Volt direct current 16.50

C-749

C-748

C-748. VICTOR No. 2 LITTLE GIANT EYE MAGNET

The No. 2 Little Giant Eye Magnet has a little over one-fourth the strength of the large Victor Giant Magnet. It can be raised or lowered, swivelled and tilted.

It is provided with two interchangeable gold-plated tips and is equal in appearance and workmanship to the larger magnet.

Price for 110 or 220 volt current, or for batteries....\$28.00
 Price for Hand Controller Rheostat..... 10.00
 Price for No. 1 Rectifier, necessary for alternating current only..... 25.00

C-747. VICTOR GIANT EYE MAGNET

Great strength, perfect poise, ease of manipulation and absolute control of the magnet field have been combined in the design and construction of this magnet.

The magnet alone weighs 50 pounds and has a lifting power of approximately 400 pounds to the square inch. The crane, although weighing with the magnet over a hundred pounds, is mounted on light running casters and can be moved without any great effort. The chief advantage of this construction is that the patient may be laid on a couch or operating table and the crane moved into such a position that the magnet is suspended directly over him, and then by means of raising and lowering mechanism, the magnet may be lowered to the exact position desired; the accidental lowering of the magnet is impossible. It is best to use a rheostat so that its immense pulling power can be kept under perfect control. We strongly advise the use of the foot controller in preference to the one used by hand for the reason that the use of the former allows the operator perfect freedom in the use of both hands, as well as enabling him to concentrate his attention upon the work in hand.

C-747

Price without rheostat, but otherwise as shown in the cut, for 110 volt direct current or for batteries.....\$130.00
 Price additional wound for 220 volt, direct current..... 3.00
 Price additional wound for 500 volt, direct current..... 5.00
 Price of foot-rheostat for any circuit..... 26.00
 Price of graduated wall-rheostat for 110 or 220 volt and battery circuits..... 9.00
 Price of graduated wall-rheostat for 500 volt circuit..... 12.00
 Price of crane only when not sold with the Victor giant magnet..... 65.00
 Price of Victor No. 2 Rectifier, necessary on alternating current only..... 55.00

EAR INSTRUMENTS

THE ELECTRO SURGICAL INST. CO.'S (ROCHESTER, N. Y.) ELECTRIC AURISCOPES

C-1567. THE E. S. I. CO. AURI-SCOPE, STYLE B

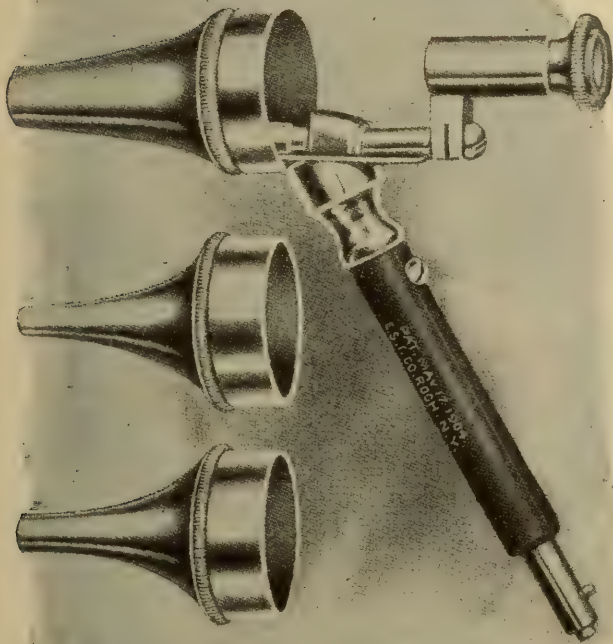

This improved model has sufficient space between the speculum and the magnifier for the convenient introduction of instruments, applicators, etc. The handle placed at an oblique angle allows great freedom of movement. The lamp is small, is so placed as to take up practically no available working space, and being lens-tipped, throws condensed illumination directly on the drum-head. It has been found especially valuable for paracentesis and similar operative work, one of its great advantages being that it can be used with the patient in any position, thus making it invaluable for bedside work.

When so desired this auriscope is furnished without the handle and with the cord connection attached directly to the instrument.

Price, complete, with 3 specula. \$6.00

Price, form without handle, complete as above 6.00

Price, additional specula, each.. .75

C-1566. THE E. S. I. CO. PNEUMATIC AURISCOPE

Two windows are now furnished with this instrument, one air-tight with large lens for diagnostic purposes and massage, the other consisting of an open ring with a small lens attached at one point on its internal surface, leaving almost the whole lumen free for operation, with magnified image through the small lens. The ring turns easily in the auriscope barrel so that the small lens may be brought into any position around the periphery without shifting the auriscope, a feature possessed by no other instrument of this class and of the greatest possible value in keeping the lens out of the operator's way. This auriscope has been found especially useful for bedside work and for the examination of children. When so desired the auriscope is furnished without the handle. In this form the cord connection is on the instrument proper, and when preferred can be attached directly to our tungsten battery, the latter forming a handle.

The lamp may be lighted with battery, socket current controller, wall plate or transformer.

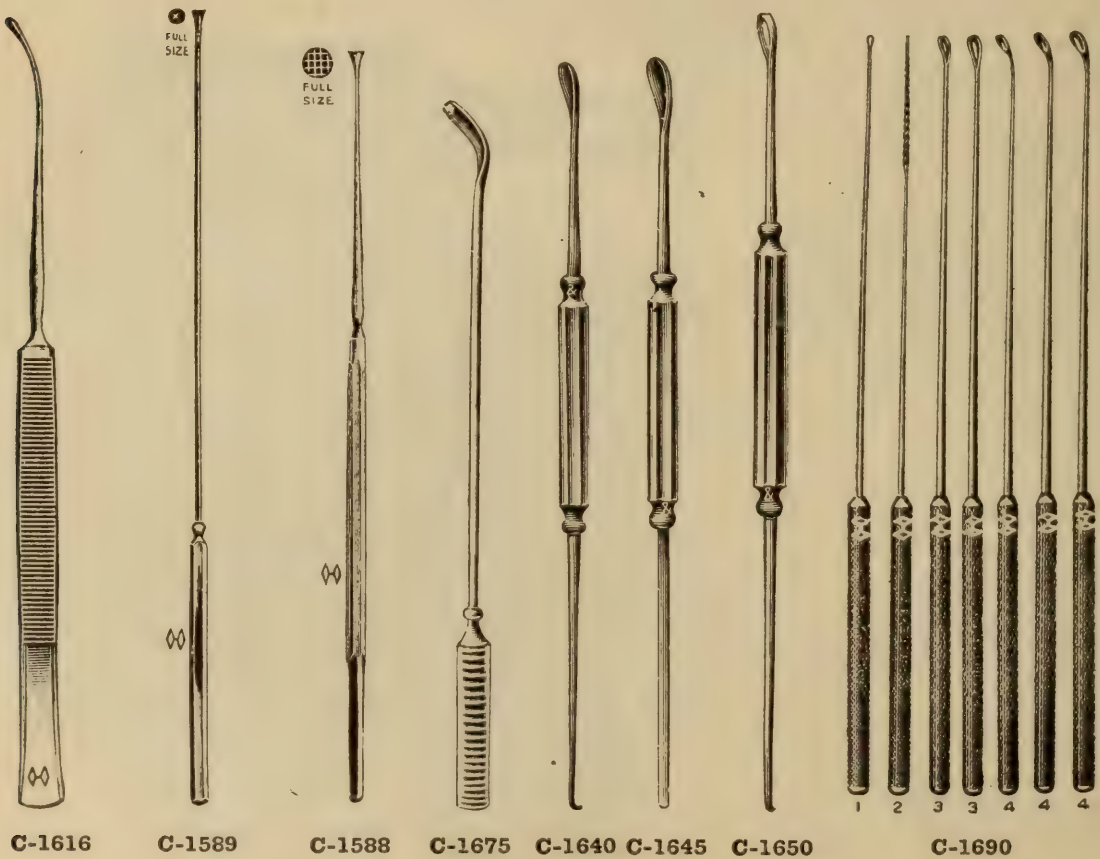

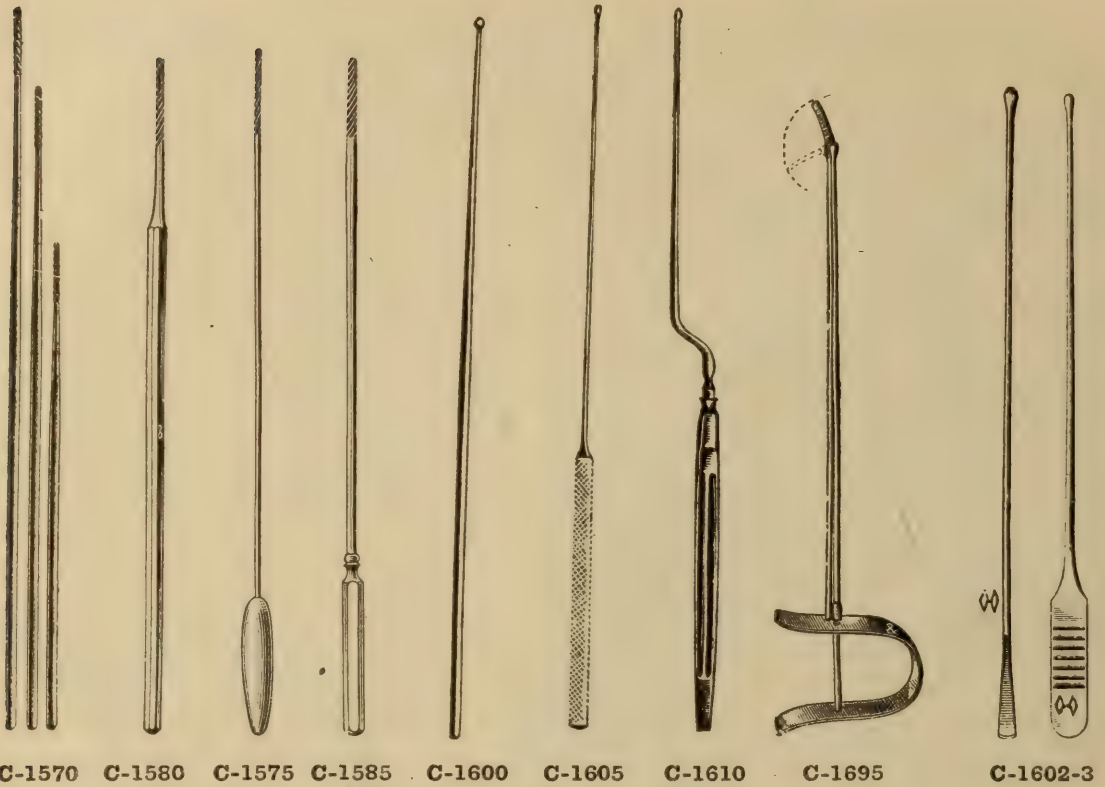

Price, complete, with two specula, two lens windows and bulb...\$8.00

Price, form without handle, complete as above 8.00

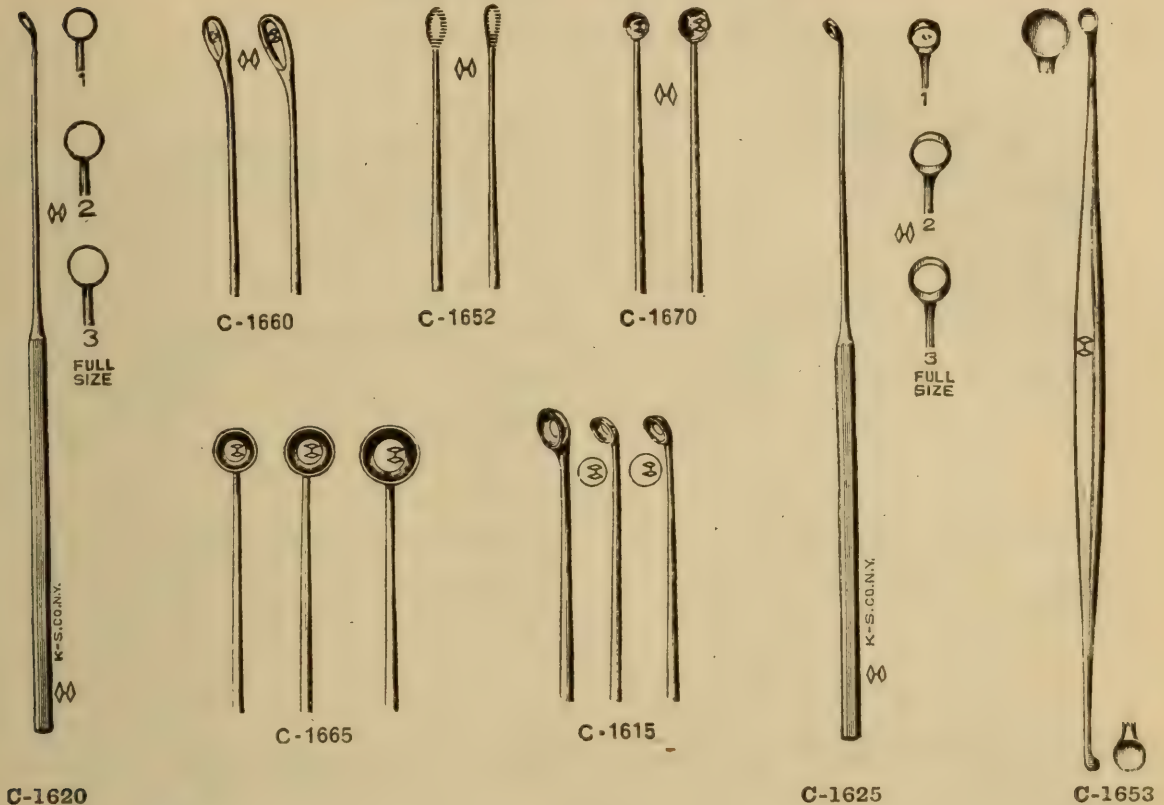

Price, additional specula, each75

C-2450	Hearing Horn, London, nickel finish, small, \$3; medium, \$3.50; large....	4.00

Our London hearing horns are not the cheap instrument that generally passes under that name, but are correctly made with an idea of securing the greatest acoustic value.

C-2452	Hearing Horn, The "Sonor," 3x2x $\frac{7}{8}$ in., oxidized metal body.....	\$ 6.50
C-2453	Hearing Horn, The "Sonor," 3x2x1 $\frac{1}{2}$ in., oxidized metal body.....	8.50
C-2454	Hearing Horn, The "Sonor," 4 $\frac{1}{2}$ x2 $\frac{3}{4}$ x1 $\frac{1}{8}$, oxidized metal body.....	10.50

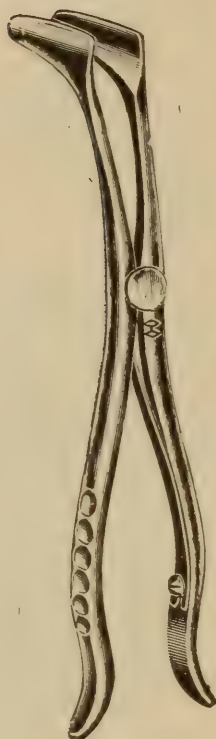

This hearing instrument has a leather cover or outside case, made to resemble a lady's purse and without in the slightest degree impairing its acoustic value. When in use the ear piece is pulled out and inserted into the ear. When closed it readily passes inspection as a purse of more than ordinary value.

This speculum is intended for ear and nasal work, is made of wrought metal highly polished and nickel plated. It is light, strong and easily rendered aseptic. The lamp is located well back of the left blade and does not interfere in any way with the free use of the applicators, probes, etc. The lamp has a condenser or bull's-eye blown on the end of the bulb, throwing the light well forward and illuminating the cavity perfectly.

*C-2782	Weingaertner's, nasal punch, oval.....	10.50
*C-2789	Weir's.....	3.50

The attention of the specialist is called to the construction of our Van Struycken forceps. The construction offers two distinct advantages over other makes. The cut is narrower and sharper. The groove on each side of the blades, extending backward toward the handles, permits of continuous forward cutting.

NOTE.—Prices quoted above are for blades only.

UNIVERSAL HANDLE

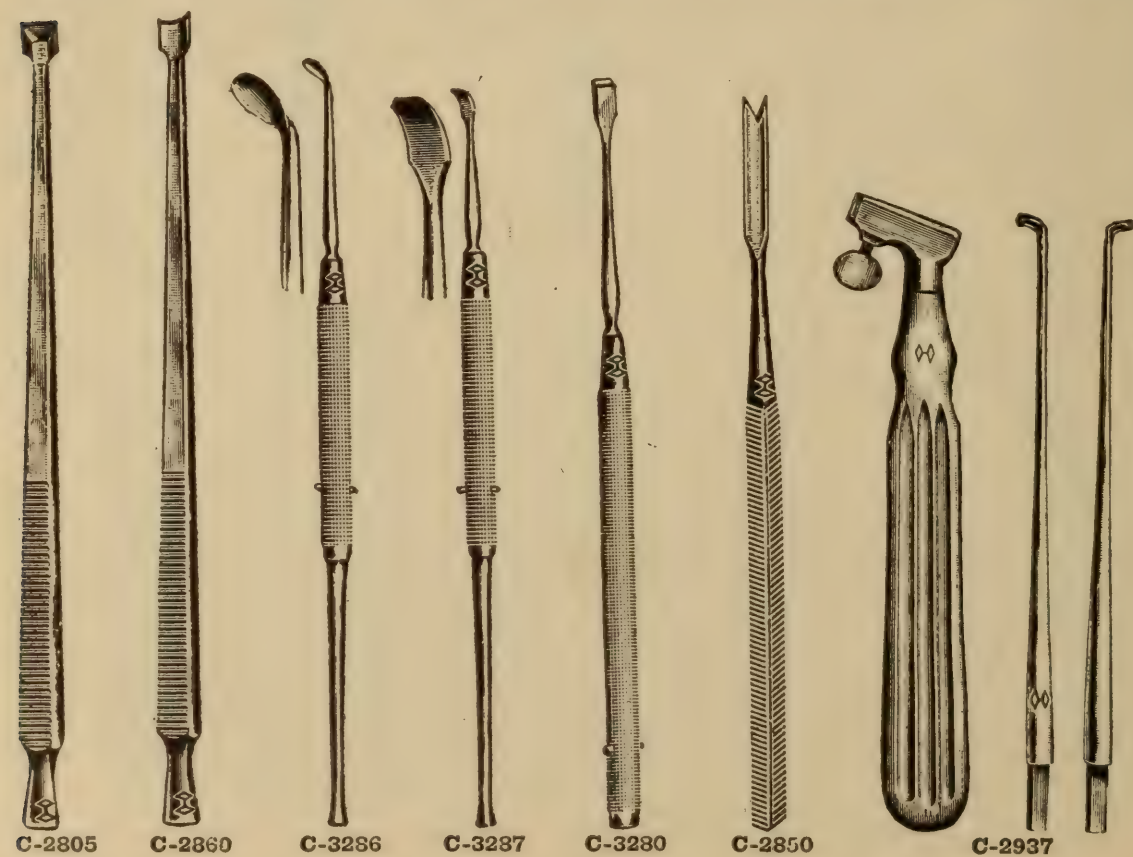

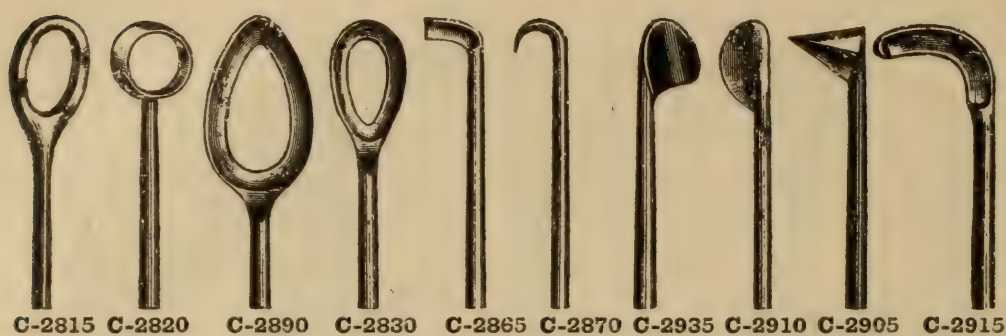

C-2812	Universal Handle, only.....	\$7.25
--------	-----------------------------	--------

The shanks of the nasal cutting forceps and scissors listed above are made interchangeable to fit the Universal Handle. The mechanical construction of the handle is very simple. It fits the hand perfectly, gives great power and is so designed as to place the hand of the operator well out of the line of vision. The blades can be rotated in the handle and held in four different positions. A simple mechanism attached to the handle permits the changing of the blades in a few seconds.

The interchangeable feature adds slightly to the cost if a single instrument is purchased, but where two or more blades are purchased or where the purchaser, when buying the first instrument, has a practice that might demand other blades for future work, the practitioner will find that he can effect a considerable saving.

We guarantee every blade to be perfect in fit, design, finish, temper and cut.

DeVILBISS ATOMERS

DeVilbiss Atomer, No. 12.....	1.50
-------------------------------	------

It is supplied with a one dram graduated bottle, especially designed for spraying expensive solutions or where only a few drops are used. Will spray oils or aqueous solutions in any direction and from any bottle or container. Can be sterilized by boiling.

DeVilbiss Atomer, No. 15.....	1.25
-------------------------------	------

This atomer is the same in action as the No. 16. It has one bottle, and a metal outlet tube only.

DeVilbiss Atomer, No. 16.....	1.50
-------------------------------	------

It will spray any liquid: oil, aqueous or alcoholic, in any direction desired, from any bottle or open container, has two bottles, is provided with extra hard rubber outlet tube for spraying corrosive solutions.

DeVilbiss Atomer, No. 18.....	2.00
-------------------------------	------

Has all of the qualities of No. 16, and in addition, is so constructed that a quarter turn of a thumb nut closes air and fluid tubes, making it non-spillable.

DeVilbiss Atomer, No. 22.....	1.00
-------------------------------	------

This atomer is a continuous spray for either oils or aqueous solutions. Can be inverted without spilling the contents.

DeVilbiss Atomer, No. 28.....	1.00
-------------------------------	------

Sprays any liquid: oil or aqueous, provided with extra hard rubber outlet tube for spraying corrosive solutions. Construction is simple, and it can be readily taken apart for cleaning.

DeVilbiss Atomer, Nasal, No. 30.....	1.00
--------------------------------------	------

Sprays either oil or aqueous solutions. Embodies our pipe point construction, eliminating the fine fluid tube, and minimizing the trouble of stopping up. Anatomically correct and far superior to the ordinary nasal atomizer. Can be readily taken apart for cleaning.

DeVilbiss Atomer, No. 31 (Continuous Spray).....	1.25
--	------

Sprays any solution, oil or aqueous. Supplied with a hard rubber outlet tube for spraying corrosive solutions. Supplied with a nasal guard, which should be removed when spraying the throat.

DeVilbiss Nebulizer, No. 41.....	1.25
----------------------------------	------

Differs from No. 49 in that it has no table for regulating the vapor.

DeVilbiss Nebulizer, No. 49.....	1.50
----------------------------------	------

For oils only, throwing a dry or moist vapor. The vapor may be weakened by turning the little table to a horizontal position, or strengthened by turning it to a perpendicular position. Is invertible, can be placed in any position and the contents will not spill.

DeVilbiss Single Nebulizing Tube, No. 20 T R for spray No. 20.....	.15
--	-----

DeVilbiss Double Nebulizing Tube, No. 526, can be attached to any DeVilbiss Nebulizer.....

.25

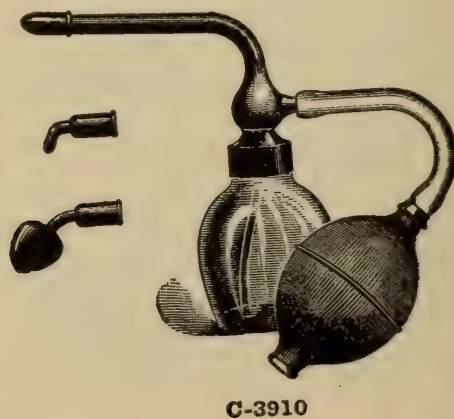

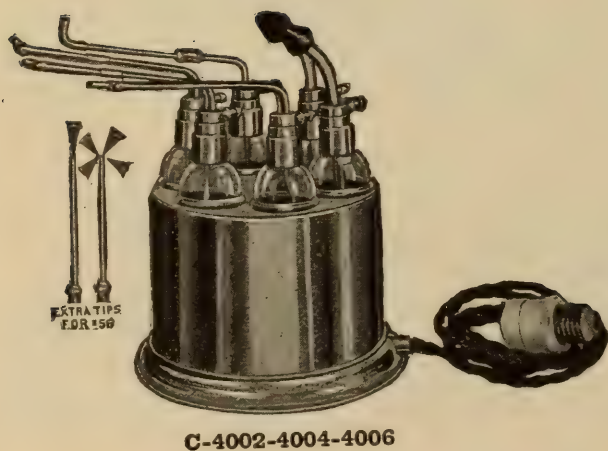

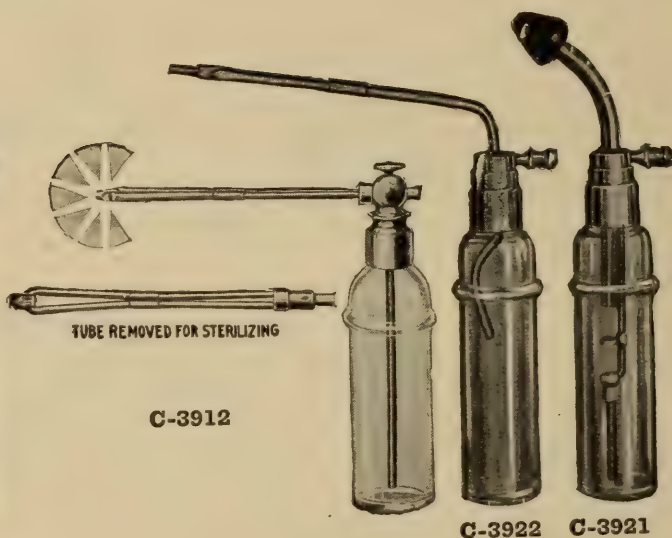

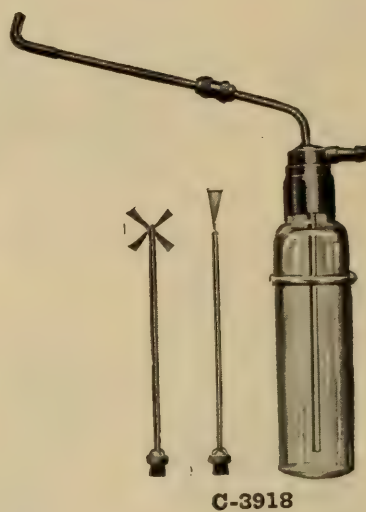

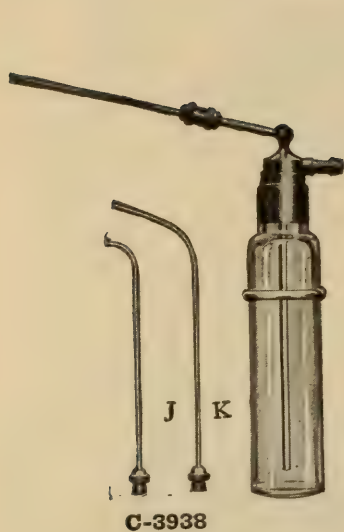

DeVilbiss Powder Blower, No. 36.....	1.00
--------------------------------------	------

Will diffuse powder perfectly in any desired direction. The result is accomplished by a counter current preventing any of the powder bunching.

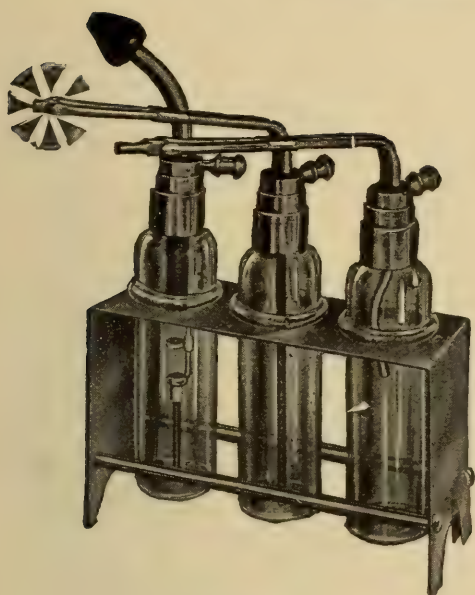

DeVilbiss Eye Irrigator, No. 90.....	1.00
--------------------------------------	------

Throws a very fine stream of any solution. Especially useful in treating eyes, washing ulcers, etc.

ATOMERS, NEBULIZERS, ETC., FOR USE WITH COMPRESSED AIR

C-3916	DeVilbiss Atomer, No. 52.....	1.00
Sprays and liquid—oil, aqueous or alcoholic—in any direction desired and from any bottle or open container.		
C-3917	DeVilbiss Atomer, No. 53.....	1.00
Same as No. 52, except that it will spray in any direction laterally.		
C-3912	DeVilbiss Atomer, No. 54.....	2.00
This Atomer has all the advantages of Nos. 52 and 53. Spray tube can be readily removed for sterilization, and also makes it possible to have individual spray tubes for each patient. Extra spray tubes supplied at \$1.00 each.....		
C-3918	DeVilbiss Atomer, No. 56.....	1.50
Furnished with three tips as illustrated.		
C-3919	DeVilbiss Atomer, No. 58.....	1.00
Will throw a fine spray of any liquid, either oil or aqueous. Is particularly designed for spraying expensive solutions.		
C-3921	DeVilbiss Nebulizer, No. 80.....	1.00
For oil only and produces a moist or dry vapor by regulating the table as in DeVilbiss Nebulizer No. 49.		
C-3922	DeVilbiss Powder Blower No. 73.....	1.00
Diffuses powder perfectly in any desired direction, and is furnished with extension tip, which can be removed when desired.		
C-3930	DeVilbiss Three-piece Set.....	3.50
Includes No. 52 Atomer, No. 80 Nebulizer and No. 73 Powder Blower, with nickel-plated stand.

COMPRESSED AIR APPARATUS

C-4210

C-4210 COMPRESSED AIR OUTFIT

This outfit consists of a seamless steel tank, 10x36 inches, tested up to 500 pounds air pressure, equipped with air pressure gage, cross cock with inlet and outlet valve, and finished in either aluminum bronze or nickel plate; T handle pump of the regular pattern, very powerful; 4 feet of silk-covered tubing, 4 feet of linen-lined rubber tubing, automatic cut-off, and set of 3 hard-rubber spray tubes.

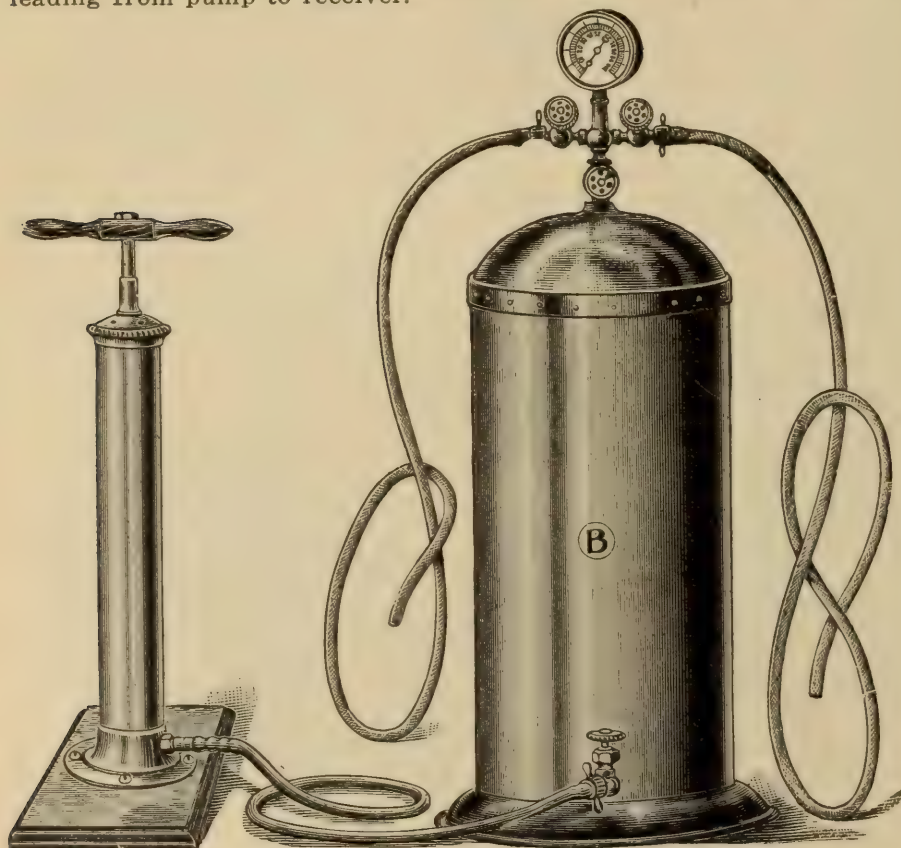

Price in aluminum and bronze finish, pump and fittings nickel plated\$35.00

Price in all nickel-plated finish. 37.50

If double cylinder, lever handle pump is wanted instead of the T handle pump described, add \$5.00 to the price of apparatus as listed.

C-4215 COMPRESSED AIR OUTFIT

This outfit consists of a T handle pump, receiver, set of 3 hard-rubber atomizing tubes, 4 feet silk tubing with automatic cut-off, 4 feet of linen-lined rubber tubing leading from pump to receiver.

C-4215

Receiver is made of brass, with dome riveted and sweated on, bottom of tank sweated on, equipped with air pressure gage, inlet and outlet valve, and air regulating valve from receiver to outlet. Tested up to 100 lbs. air pressure, gage reading to 50 lbs. Receiver and fittings highly polished and nickel plated.

The pump is of the regular T handle style of the best make and fully guaranteed.

For a physician whose practice requires only a limited amount of compressed air, we can heartily recommend this apparatus.

Price, complete as described ..\$31.50

"TANKLESS" APPARATUS

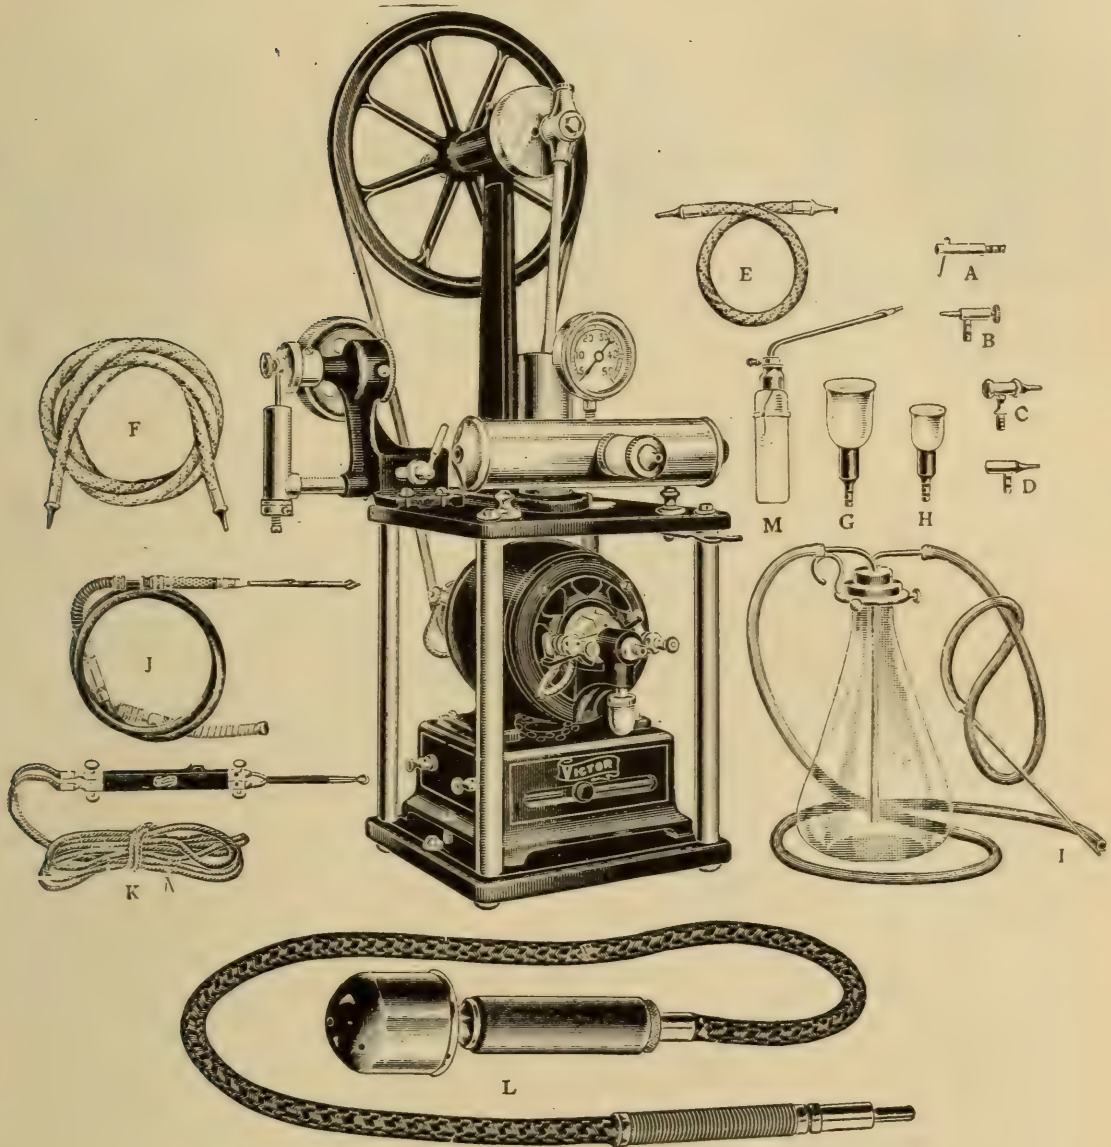

Fig. 1 (VICTOR "NO. 8" TANKLESS)

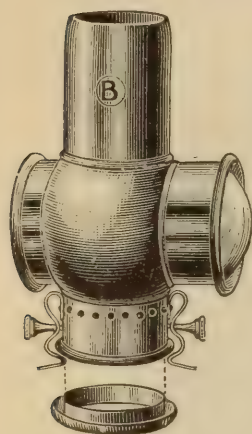

VICTOR TANKLESS APPARATUS

Range of Service—Tankless compressed air up to and exceeding 50 lbs., suitable for all types of spray, nebulizing and powder blowing bottles; suction for aspirating and all Bier Hypermic appliances; pneumatic massage (ordinary application); pneumatic massage (delicate application); cautery current (complete service); endoscopic light current (complete service); motive power for all flexible shaft appliances, such as vibratory massage handle, nasal drill or bone surgery cable.

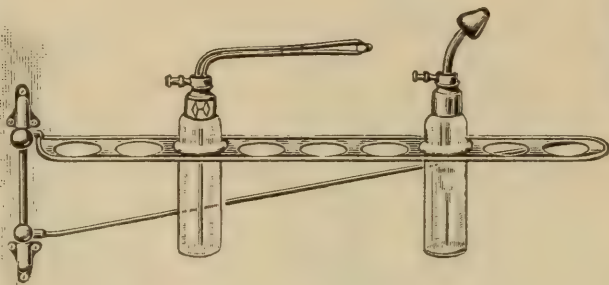

This type of apparatus is finished in four models, complete particulars being given in a separate bulletin, which will be sent free on request.

Price, \$68.00 and upward, according to scope of service.

ILLUMINATING APPARATUS

ELECTRIC HEAD LAMPS

C-4446 Victor No. 3 Head Lamp

Connects to any electric light socket provided with duplex swivel joint.

Price, arranged for the 110-volt direct or alternating current.....\$7.50
Price, arranged for the 220-volt direct or alternating current..... 9.50

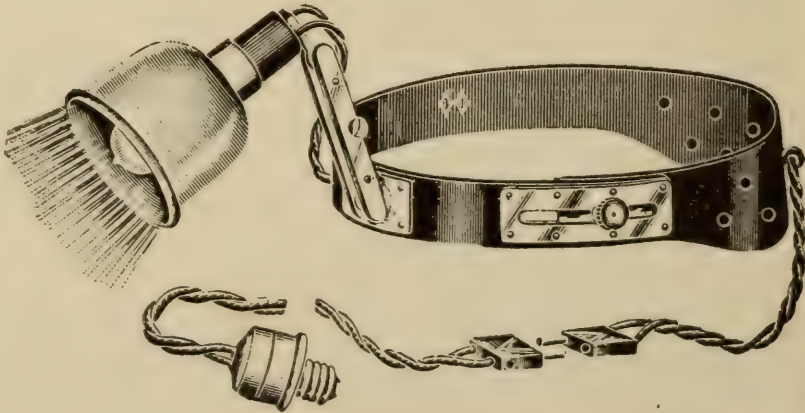

Victor No. 1 Head Lamp

Provided with telescopic lens and reflector for concentrating or diffusing the light. Lamp is of the miniature type and must be used in connection with socket controller or current tap.

Price\$10.00

C-4449 Murphy's (Dr. J. B.) Electric Head Lamp

Murphy's Electric Head Lamp, to be attached to any 110-volt electric light circuit, is equipped with aluminum reflector, round 3-10 C. P. tipless lamp, vulcanite head band, non-breakable plug, 9 feet of silk-covered cord and hard-rubber stage connector, which separates the cords into 3 and 9-foot lengths.
Price\$9.00

Murphy's Electric Head Lamp, vulcanite band, without cord separator.

Price\$7.00

Murphy's Electric Head Lamp, equipped with metal arch band with padded front and rear cross-piece.

Price\$9.00

NOTE.—Current Controllers for use with Electric Illuminating Apparatus will be found in Section F.

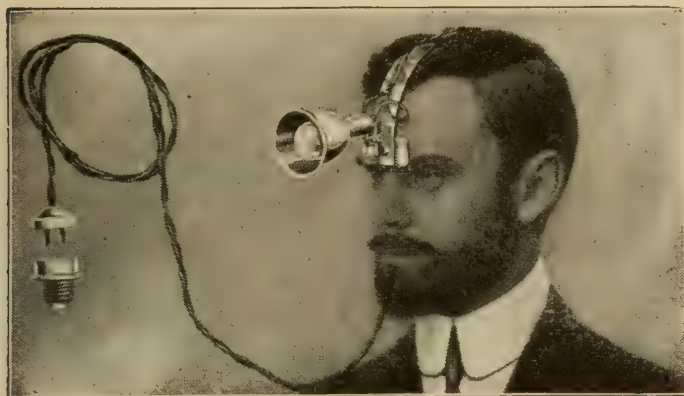

ILLUMINATING APPARATUS

ELECTRIC HEAD LAMPS

C-4454 McIntosh No. 1 Aseptic Head Lamp

All connections pass through fibre outlet at back of reflector in which is contained tipless lamp, throwing a powerful diffused light free from shadows, which may be adjusted by the double ball and socket joint. The instrument is finely finished and provided with rich, silk-covered cord and plug connecting with any lamp socket to 104-115-volt direct or alternating current. Specify plain or frosted bulb.

McIntosh No. 1 Aseptic Lamp, as illustrated.....\$6.00

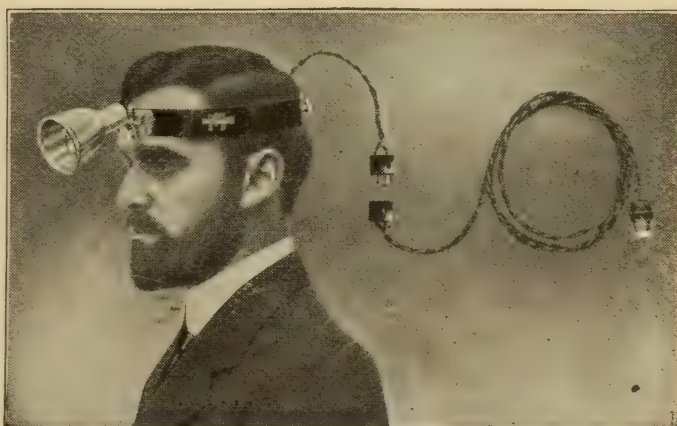

C-4456 McIntosh No. 3 Collapsible Fibre Head Lamp

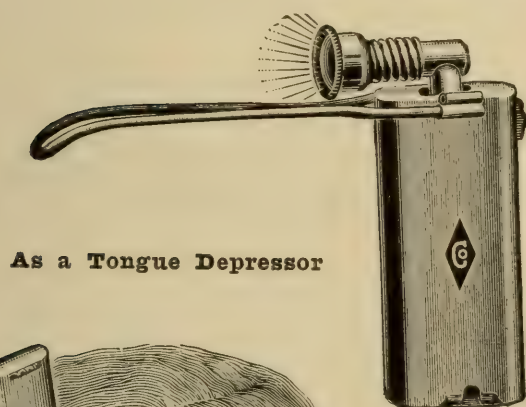

Fitted with a comfortable fibre band which can be folded into compact space and readily slipped in the pocket. The fibre band is very light and can be worn for hours without discomfort. Connects with any 104-115-volt current. Specify plain or frosted bulb.

McIntosh No. 3 Collapsible Fibre Head Lamp.....\$7.50

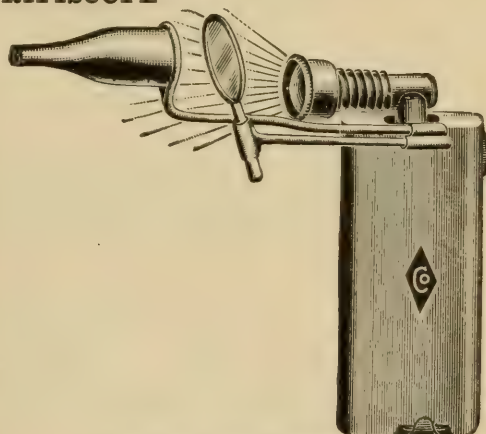

McIntosh No. 2 Adjustable Fibre Head Lamp, same as above, but with hat shaped fibre band..... 7.50

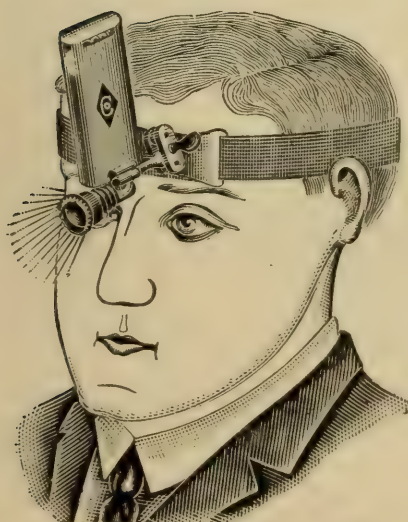

C-4458 CARSTENS ORIFISCOPE

As a Tongue Depressor

As an Ear Speculum

As a Head Light

The complete outfit comprises a Lamp, a Tongue Depressor, a Holder for wood blade Tongue Depressor, an Ear Speculum with Holder, an Adjustable Magnifying Glass, a Self-Retaining Nasal Speculum and a strong mercerized cotton Head Band to which the lamp may be attached and be used as an Electric Head Light.

Price, complete with Head Band.....\$6.00

Price, without Head Band..... 5.00

NASAL AND PHARYNGEAL ILLUMINATING INSTRUMENTS

The illuminating instruments illustrated below are carefully and scientifically made, are all equipped with the Electro Surgical Instrument Co.'s improved cold lamp and are well adapted to the purposes for which they are made.

C-3684 THE E. S. I. CO. GENERAL DIAGNOSTIC ILLUMINATOR

The lamp is lens tipped, throwing a brilliant cone of light directly forward and the instrument is especially fitted for the illumination of cavities—mouth, nose, vagina, rectum, etc., and may be used with or without specula, tubes, etc. Length 10 cm. Price, straight, net, \$2.50; angular, net.....\$3.00

C-3681 THE E. S. I. CO. DOWLING ANTRUM ILLUMINATOR

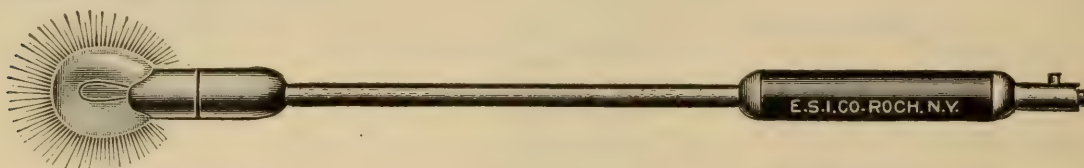

This instrument is similar to the regular E. S. I. Co. antrum illuminator, except that the lamp of the Dowling is provided with a metal reflector, and has a slight curve at the base, thus allowing it to be placed flat with back on the palate against the thinnest part of the bony wall. Price, with either 6 or 10-volt lamp, net.....\$4.50

C-3686 THE E. S. I. CO. LARYNGOSCOPE AND MOUTH LAMP

It is simple in construction and avoids all the annoyances pertaining to the use of the head mirror. The various mirrors are interchangeable. The shank on the mirrors being flattened prevents gyration. The mirror furnished is $\frac{3}{4}$ inch.

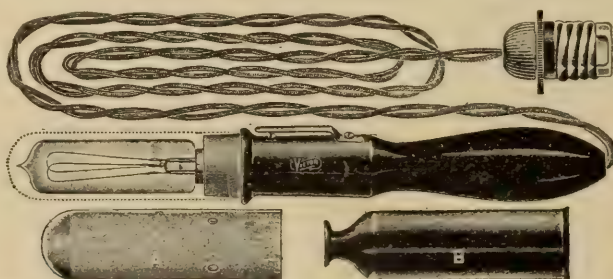

Price, net\$3.50
Mirror, 1 inch, extra, net..... 1.10

C-3687 THE E. S. I. CO. ANTRUM ILLUMINATOR

This instrument is furnished with a lamp having a capacity of either six or fifteen volts. The bulb is flat, about 6 mm. thick and about 15 mm. in diameter, its shape permitting it to lie close to the hard palate so that the full benefit of the light ray is obtained. The instrument should always be used in a dark room.

Price, net\$3.50

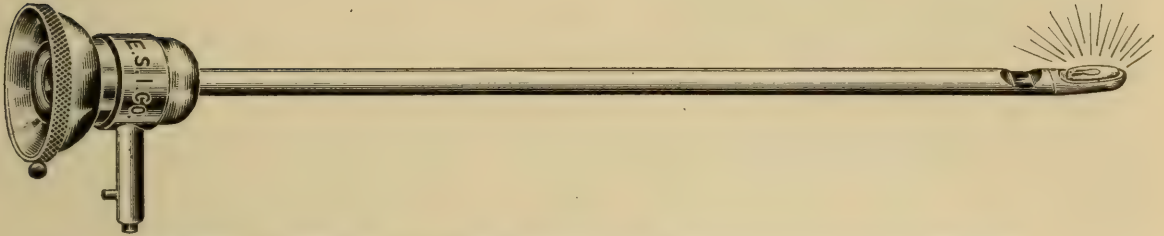

C-3692 FREER-JACKSON TRANSILLUMINATOR (VICTOR)

The source of light is a long, high candle-power lamp, calibrated to deliver a much greater volume of light than is possible with any of the transilluminators provided with miniature lamps. Two shields are provided (a) for illuminating the antrum of Highmore and (b) for illumination of the frontal sinus

Price, arranged for attachment to the 110-volt direct or alternating current.....\$4.75
Price, arranged for the 220-volt direct or alternating current..... 6.75

NASAL AND PHARYNGEAL ILLUMINATING INSTRUMENTS

C-3691A THE E. S. I. CO. "HOLMES" NASOPHARYNGOSCOPE

This instrument, made by the E. S. I. Co. of Rochester, N. Y., is the only one that is used and endorsed by Dr. Edgar M. Holmes of Boston, its designer. It is constructed on the lines of a very small, diagnostic cystoscope, the barrel being 12 cm. long and less than No. 12 French scale, the whole weighing less than $\frac{1}{2}$ ounce. The lamp beak is short and is placed as near the prism opening as possible, and at a straight angle to the shaft, thus giving perfect illumination on the field in view. Special circular giving complete description mailed on request.

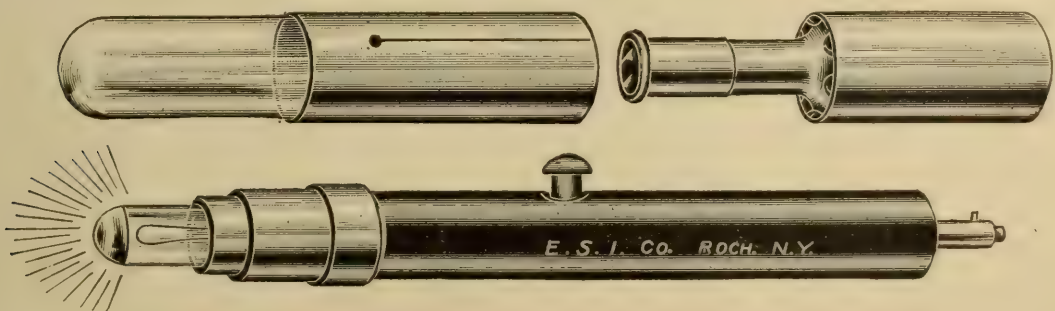

Price, complete in metal case, with one extra lamp and conducting cords with make and break attachment, net.....\$33.00
 Extra lamps, each..... 1.50
 Lamps will be remounted for..... .75

C-3688 THE E. S. I. CO. FRONTAL SINUS ILLUMINATOR

This instrument, when pressed against the orbit just below the superciliary ridge, illuminates the sinus so satisfactorily as to be indispensable for accurate diagnosis. Furnished with six or fifteen-volt lamp. To secure best results should be used in a darkened room.

Price, net\$4.00

C-3692A THE E. S. I. CO. "SULLIVAN" ANTRUM AND FRONTAL SINUS ILLUMINATOR

Designed by Dr. John J. Sullivan of Scranton, Pa. The illuminator consists of a handle with make and break attachment, to which is fitted a powerful tungsten lamp of 10 volts; 2 hoods to fit over the lamp are furnished, one with a glass cylinder to intensify and carry the light for deepest penetration for frontal sinus work, the other is a glass hood fitted to a metal base for illumination of the antrum.

Price, complete, net.....\$7.00

CAMERON'S DIAGNOSTOLITE

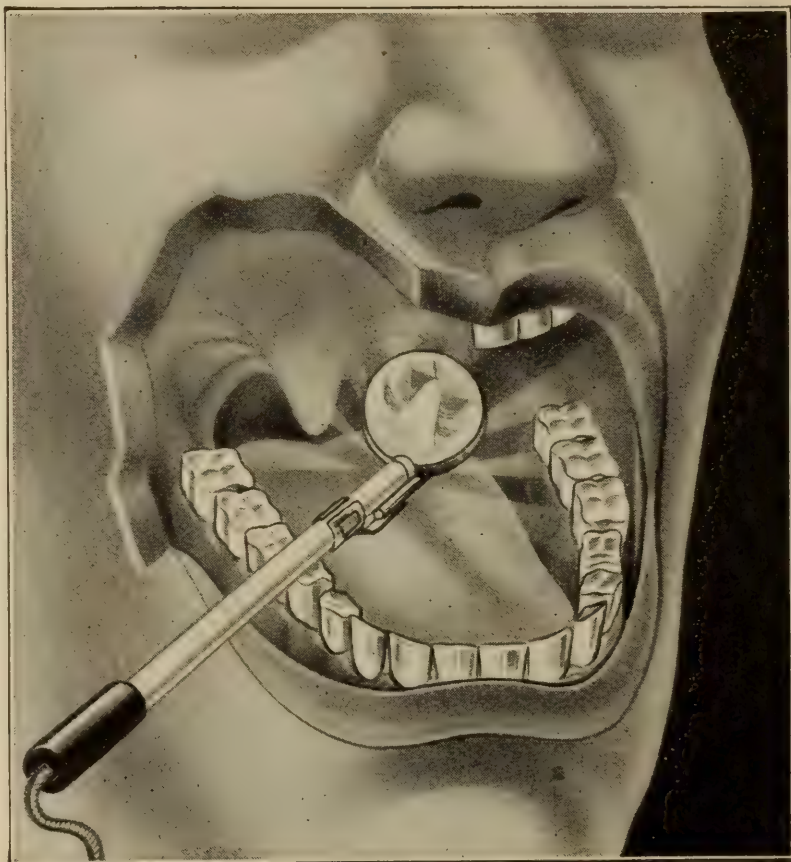

No. 6

Cameron's Diagnostolite will appeal to the medical practitioner or specialist who wants in a compact form a satisfactory, practical and sanitary light for any use, without the danger of harmful heat. It contains one tubular lamp of special design, $4\frac{1}{2}$ inches long and $\frac{1}{8}$ of an inch in diameter. It is made of opal glass and in the end of this is fused the lens which concentrates the light rays. This is the searchlight principle properly applied for diagnostic work. The concentration of these light rays in any desired area by this principle gives an abundance of direct light free from shadows without any glare.

This light shows the tissue in natural color. The lamp is safe to use in the interior nares, for antrum or sinus examination, for vaginal exploration or for use in deep abdominal wounds. All danger of heat is overcome by the special construction of this lamp. Included in each outfit is a plain No. 4 mirror, which may be boiled. Any standard size of mirror either plain or magnifying may be had if specified. This mirror is adjustably mounted on the tubular lamp, and it may be bent to any angle or instantly removed.

Cameron's Diagnostolite is put up in a conveniently partitioned leatherette case, $6\frac{1}{4} \times 5\frac{1}{4} \times 2$ inches, and the total weight, including the battery, is one and one-half pounds. The cord is four feet long and consists of 42 strands of wire, insulated with cotton and rubber with a green silk covering. It is specially made for this purpose and is very flexible. The socket in which the Dentalamp is mounted is made of one piece of hard rubber and it can be readily dismounted and cleaned and the insulation is perfect. The standard Ever Ready three cell batteries for flashlight use are furnished and the cost to operate is less than two cents an hour. They are carried in stock by all the electric supply houses and sell for not more than 45 cents.

The instrument is supplied, completely assembled and is fully guaranteed and the accompanying illustration No. 6 is a photographic reproduction. In No. 7 is shown the common method of use.

No. 7

Extra lamps or mirrors may be had for, each.....\$1.00
The price of the complete instrument is..... 6.00

CAMERON'S ELECTRO-ORAL ASSISTANT

No. 1

tongue depressors and they may be instantly detached, or the instrument may be used without the tongue depressors. It is not possible for this instrument to slip while in use, as any pressure on the distal extremities binds it in the slot, and the greater the pressure the harder it is to release. When requested we furnish with a set screw.

There is no danger of injuring rubber gloves in manipulating this instrument. The retractor is made of case-hardened steel and it will stand any strain by any patient under any condition. The tongue blades are of flexible cold rolled steel so they can be adjusted to any position in any patient's mouth, and these may be readily detached.

Particular attention is directed to the fact that the light carrier is entirely out of the field of operation and the lamp is guarded from the instrument by a metal shield which makes it safe to use under any condition. The instrument is put up in a serviceable leatherette case, $7\frac{1}{2} \times 5 \times 2$ inches, weighs one and one-half lbs., and the instrument compartment is lined with heavy white oilcloth. It is conveniently partitioned to separate the batteries and the instruments.

The cordage is 42-ply wire, insulated in cotton and rubber and finished in green silk. The electrical connections are the familiar plug socket connections, and they cannot get out of order. Standard Ever-Ready batteries giving 28 hours of light are furnished with this outfit, and standard 3.8-volt lamps costing 15c each are used.

The price is \$7.50.

In cut No. 1 is shown the photographic reproduction of the instrument, and cut No. 2 shows the instrument in position for operative treatment.

CAMERON'S DUO-ORALITE

Cameron's Duo-Oralite is a combination of the Electro-Oral Assistant and the Diagnostolite, as shown on page 344.

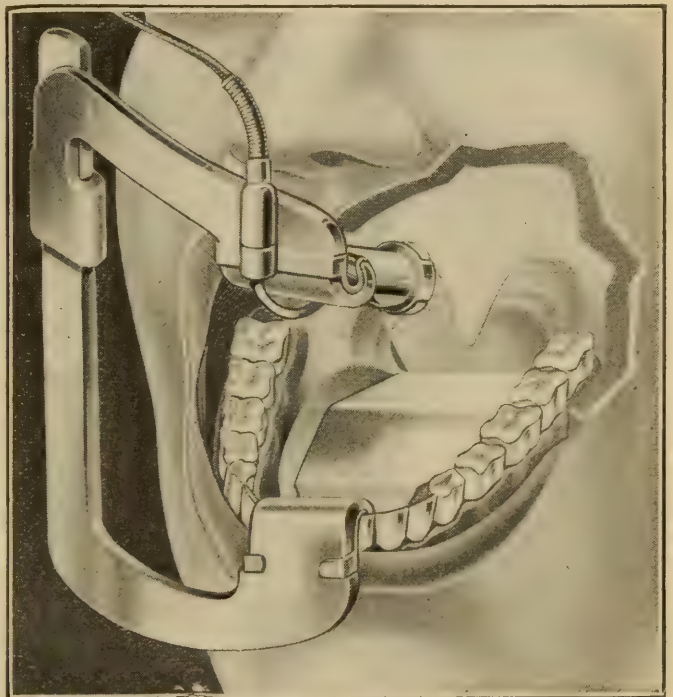

In this instrument both lamps are operated off the same battery, by means of which it is possible to interchange them instantly. A clear idea of its value may be obtained by the description furnished under each of these instruments.

The price of the Duo-Oralite, complete, is \$12.00, and it is fully guaranteed.

Cameron's Electro-Oral Assistant is equally valuable to the oral surgeon and the general practitioner. It places a direct light in the mouth and throat, generates no objectionable heat and gives a white light showing the tissue in natural color. It is self-retaining and cannot slip. For diagnostic work, for Tonsilectomy or Adenectomy operations or for touching up the throat with iodine or silver nitrate, it fills the exact requirements of each individual case. It is automatically adjustable to every patient's mouth, and it is equally practical when used with local or general anaesthesia.

It gives more room for the operator, more comfort for the patient, is light in weight and is readily sterilized and cleaned.

Each instrument is supplied with both adult's and child's size

LARYNGEAL INSTRUMENTS

UNIVERSAL GRASPING AND CUTTING FORCEPS

These instruments are all constructed on the alligator-jaw principle, and this, in connection with the arrangement of the universal handle, insures their cutting in any position in which they are placed. The distal end, or cutting tip, of the instrument will not recede from the point at which it is desired to cut, when the handles are closed.

C-5726	Universal Handle, only.....	\$7.25
C-5728	Straight Canulae, 8 inch	3.00

C-5650	Trendelenburg's Chloroform Apparatus, for canulae C-5645	5.00

Note.—Special trachea tubes made to order at shortest notice. Tubes on the market other than those listed can be secured promptly on order.

TRACHEAL INSTRUMENTS

INTUBATION

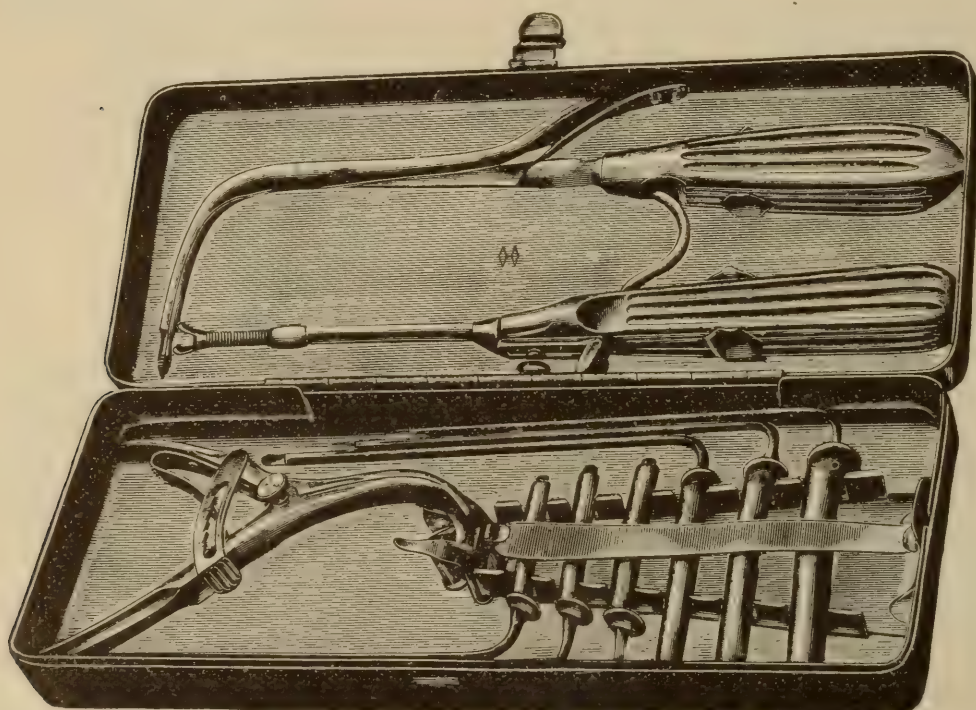

C-5650 Haslam-Ferroud
Intubation Set.

C-5650

This set of instruments for intubating the larynx of children comprises 6 gold plated tubes of the Ferroud pattern, 1 introducer and extractor of improved pattern, 1 Denhardt's mouth gag made of finest steel, and 1 tube gauge. The tubes are held on a specially constructed hinged frame from which they are easily handled. Put up in fine, nickel plated metal case. This outfit represents the latest and most up-to-date set of intubating instruments ever placed on the market.

Price, complete\$19.50

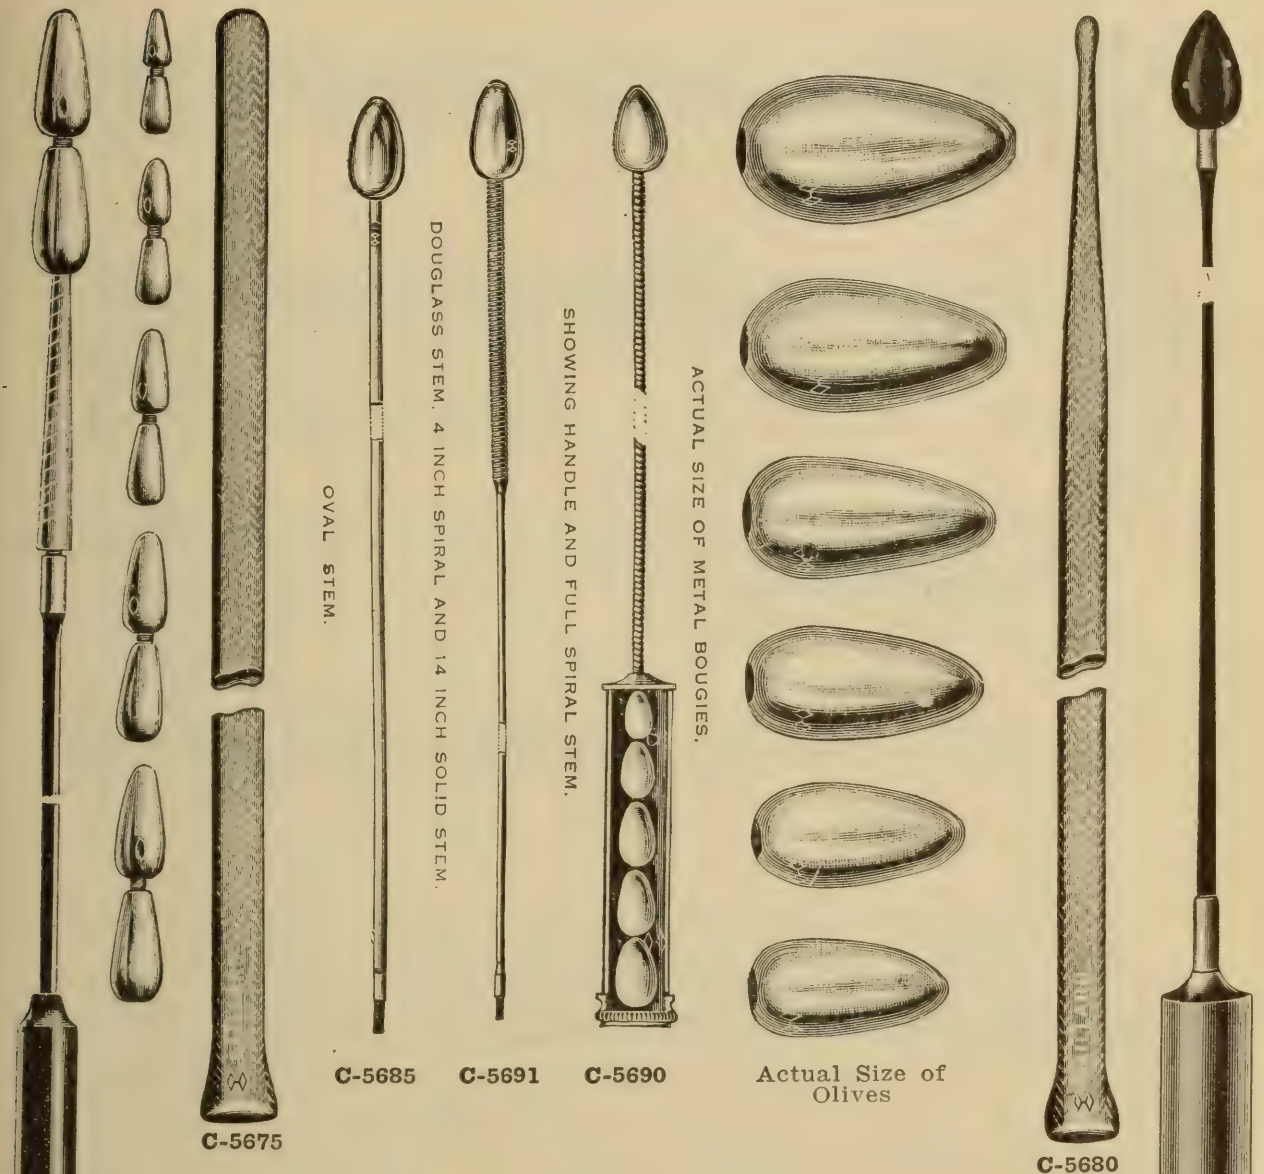

- *C-5655 Ferroud-Thorner's Intubation Set, 1 handle..... 12.00

LARYNGOSCOPIC BRONCHOSCOPIC, ESOPHAGOSCOPIC AND GASTROSCOPIC INSTRUMENTS

INSTRUMENTS FOR DIRECT LARYNGOSCOPY, BRONCHOSCOPY, ESOPHAGOSCOPY AND GASTROSCOPY

The designs for these instruments were furnished by Dr. Chevalier Jackson of Pittsburgh, Pa., and have been made for him and under his directions by the Electro Surgical Instrument Company of Rochester, N. Y. In order to secure the correct pattern of these instruments we would ask our customers to specify this make.

A catalogue giving complete description with illustration of Dr. Jackson's instruments will be mailed upon request.

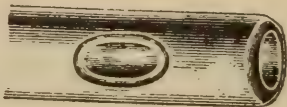

*C-5840	Lamp and Carrier for Jackson's tubes.....	\$ 2.50
*C-5845	Aspirator, Jackson's, for secretions, with all metal suction pump.....	5.00
C-5786	Laryngeal Speculum, Jackson's, No. 7, with slide (adult) 14 mm. by 16 c.m.	20.00
C-5787	Laryngeal Speculum, Jackson's, No. 8, with slide (child's) 12 mm. by 14 c.m.	20.00
C-5771	Laryngeal Speculum, Jackson's, oval side slide (adult) 25 mm. by 14½ mm. by 16 c.m.	22.00
C-5772	Laryngeal Speculum, Jackson's, oval side slide (child's) 23½ mm. by 12 mm. by 14 c.m.	22.00
C-5773	Laryngeal Speculum, Jackson's, anterior commissure, 9 mm. by 7 mm. by 17 c.m.	18.00
*C-5774	Laryngeal Speculum, Johnston's, 10 mm. by 17 c.m.	18.00
C-5776	Esophageal Speculum, Jackson's (adult) 14 mm. by 24 c.m.	19.00
C-5777	Esophageal Speculum, Jackson's (child's) 12 mm. by 17 c.m.	19.00
C-5781	Esophagoscope, Jackson's, slanted end, without obturator, with auxiliary drainage tube, No. 1 (adult), 10 mm. by 53 c.m., \$15.00; No. 2 (child's), 7 mm. by 45 c.m.	11.00
C-5784	Bronchoscope, Jackson's, slanted end, without obturator, without auxiliary drainage tube, No. 3 (adult), 9 mm. by 40 c.m., \$11.00; No. 4 (adolescent), 7 mm. by 40 c.m., \$11.00; No. 5 (child's), 5 mm. by 30 c.m., \$9.00; No. 6 (infant's), 4 mm. by 30 c.m.	9.00
C-5788	Bronchoscope, Jackson's, blunt end, with auxiliary drainage tube, 7 mm. by 45 c.m., \$11.00; 5 mm. by 45 c.m., \$10.00; 5 mm. by 30 c.m.	9.00
*C-5794	Bronchoscope, Jackson's, modified by Dr. D. Braden Kyle, with long and short light carriers, 7 mm. by 40 c.m.	14.50
C-5792	Gastroscope, Jackson's, for ordinary cases, 10 mm. by 70 c.m.	21.00
C-5793	Gastroscope, Jackson's, for extreme cases of gastroptosis, 10 mm. by 80 c.m.	24.00
C-5778	Window Plug	5.50

This attachment is employed by Dr. Mosher for ballooning the esophagus or stomach, and used with Dr. Jackson's esophagoscopes and gastroscopes.

CLAMP FORCEPS

- C-5915 Roosevelt's, double clamp (patented).....\$14.00

This clamp consists of three parts—a central blade and two lateral blades. The lock is a double Collins, permitting of easy separation and removal of the blades.

It is designed for use in suture anastomotic work. It was originally intended for use in the operation of gastroenterostomy, but it will probably prove equally as efficient, if not more so, in enteroenterostomy.

URETHRAL INSTRUMENTS

D-537. HENRY KOCH URETHROSCOPE

This instrument is made in all sizes, French scale, both odd and even numbers from 18 to 33, and in three lengths, 8, 12 and 15 cm., the 15 cm. tube being the one most commonly used. The tube has an auxiliary tube for the reception of the light carrier, offering an uninterrupted lumen for the view or the use of instruments and applicators.

Price, complete with obturator and light carrier, any size.....net \$6.50
Price, light carrier onlynet 2.50

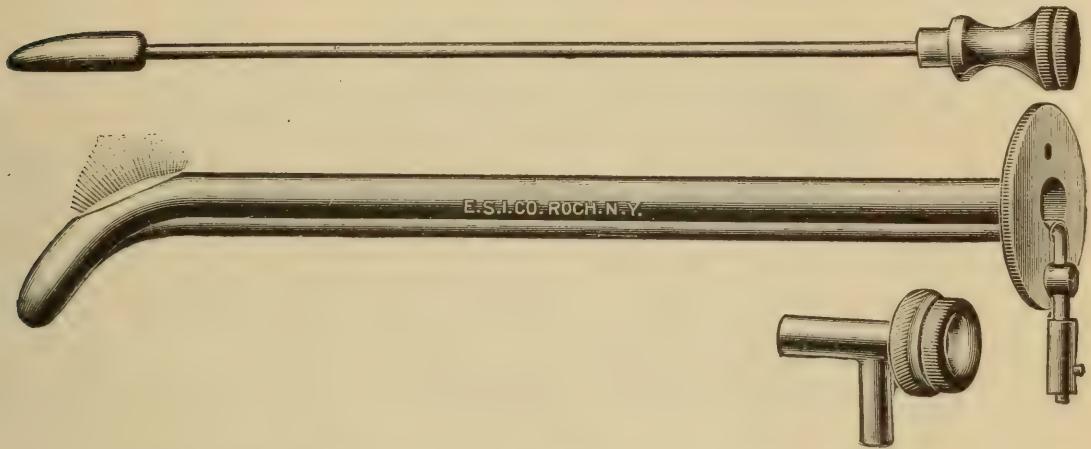

D-541. "GRANVILLE MAC-GOWAN" URETHROSCOPE

An improved urethroscope, making use of the Koch method of illumination and the Luy's aspirating tube. Gives an unobstructed, clear, dry field at the bladder neck and the urethra immediately in front of it. The aspirating tube is placed on the floor of the instrument and the floor is made flat so that an electric cautery or the carrier of a fulgurating wire can be directed to the exact spot that is to be treated. The aspirator is connected by a very firm, small rubber tubing to the pump or the water top or preferably to a suction apparatus. It is furnished in stock calibers of 22 and 24, French scale, and in lengths of 12 and 15 cm.

Price, any size, with solid obturator.....\$6.50
Price, complete 9.00
Price, light carrier (either length)..... 2.50

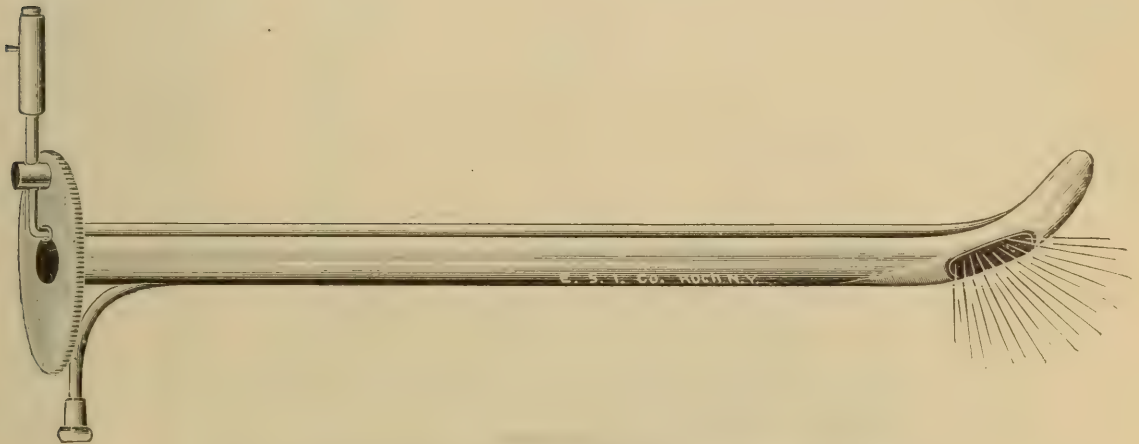

Special catalogue of electrically lighted instruments mailed upon request. The instruments listed above are made by the Electro Surgical Instrument Company of Rochester, New York, which is a guarantee of the correct design and proper construction.

URETHRAL INSTRUMENTS

**D-536. GEO. K. SWINBURNE'S POSTERIOR URETHROSCOPE**

The instrument consists of a catheter shaped tube, 16 centimeters long, with auxiliary tube on the upper side for the reception of the light carrier and lamp. It is made in three sizes, 22, 24 and 26 French scale, and is 16 cm. long.

Price, complete with obturator and light carrier.....net \$ 9.00
 Price, complete with window and dilating bulbs.....net 13.25

**D-542. "EDGAR G. BALLENGER" URETHROSCOPE**

This instrument is furnished with our modern tungsten lamp and in addition to the drainage canal it is provided with our small auxiliary light tube for light carrier and lamp. Through a fenestra at the distal end the light is thrown directly upon the surface to be examined or treated, thereby giving a clearly lighted field and permitting the application of medicaments and use of instruments without hinder, or danger of breakage of the lamp and without annoying reflections.

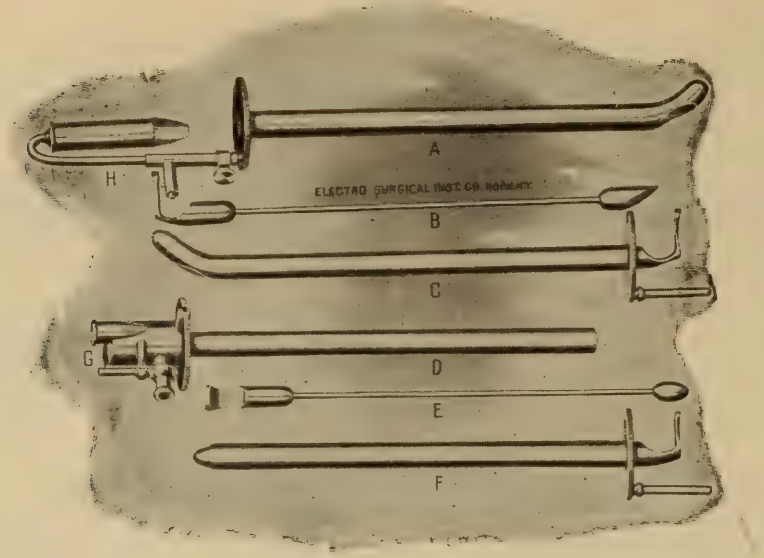

Dr. Ballenger later recommends a rubber bulb, connected with the evacuation bulb, as a temporary reservoir for the urine and which we furnish with the instrument.

The tube is 16 cm. in length to the distal opening with beak about 2 cm. in length, and is made in size 26 French.

Price, complete with light carrier and lamp and evacuating bulbs with hose attachment, \$13.25.

Special catalogue of electrically lighted instruments mailed upon request. The instruments listed above are made by the Electro Surgical Instrument Company of Rochester, New York, which is a guarantee of the correct design and proper construction.

DR. HUGH H. YOUNG'S URETHROSCOPES

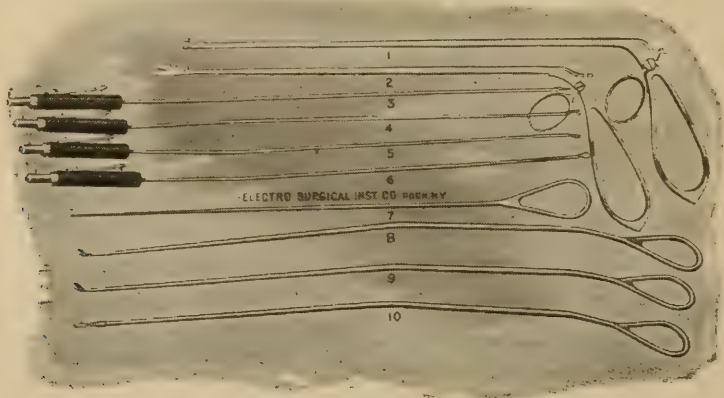

Devised by Dr. Hugh H. Young of Johns Hopkins Hospital, he holding that an external source of light is desirable in order to secure a larger field for observation and intra-urethral operations, so that bleeding will not make any difference with the illumination and that better asepsis will be secured.

Fig. A shows beaked tube with light carrier in position. Fig. B the obturator. Fig. C the beaked tube with obturator in position. Fig. D shows the straight tube with dilating window for air distension attached. Fig. E the obturator and Fig. F the straight tube with obturator in position. Tubes are made in plated metal and silver.

Our space is too limited to give a complete description of these instruments. We will be glad to send Catalogue giving full description on request.

URETHRAL INSTRUMENTS

D-564. "DR. W. F. BRAASCH" URETHROSCOPE AND MEDIAN BAR EXCISOR COMBINED

This instrument is a modification of the Young Urethroscopic median bar excisor, permitting its use as a posterior urethroscope. It has recently been improved in accordance with suggestions by Dr. Braasch, the instrument being made longer and the calibre smaller. The lamp is placed in the beak illuminating the field from the distal end, the beak being tipped at a slightly sharper angle than usual so that the light does not shine back into the tube. The fenestra near the distal end is perfectly smooth and cuts away part of the convexity of the beak, so that this main sheath makes an excellent urethroscope with a distal opening similar to that of the Swinburne. A tube and stopcock leading into the main tube at the proximal end is provided so that the urethra may be dilated, if desired, with either air or water.

For use as a median bar excisor an additional tube to be slipped inside the main sheath is used. In this, near its distal end, is a serrated fenestra corresponding to the fenestra in the main sheath. The portion of the median bar protruding into the lumen through these fenestra is excised by pushing home the cutting tube which fits snugly within the inner tube.

The calibre of the sheath is 26 F., and the length 17 cm. A water and air-tight window is furnished for use when dilation is desired.

Price, complete, with extra lamp.....	\$28.00
Price, complete, in case covered with genuine leather, seal grained.....	32.00
Price, extra cutting tubes.....	4.00
Price, dilating bulbs	extra 1.50

GAILLARD'S FRENCH CATHETERS AND BOUGIES

Are made by Léon Gaillard of Paris, France, with works at Alfortville (Seine), France. They represent the **very best catheters and bougies that can be produced** and are intended for the most discriminating specialists in genito-urinary work.

GAILLARD'S Catheters and Bougies are made on scientific principles and in accordance with the suggestions with which eminent specialists have favored us for years.

GAILLARD'S Catheters and Bougies are covered with special gum, which renders them elastic and flexible. They present a uniform surface and a glazed finish. They can neither cause injuries nor break during their introduction.

GAILLARD'S Catheters are made with woven eyes; they have a large internal diameter, a smooth internal surface, and a solid and aseptic end.

GAILLARD'S Bougies have at the bottom a conical rim which is hermetically closed with elastic gum.

GAILLARD'S Gummed Silk Web Catheters have the advantage of possessing a very large internal and even diameter which permits of perfect drainage of the vesical cavity; their strength and great flexibility facilitate greatly their introduction.

GAILLARD'S Gum Catheters and Bougies are guaranteed to withstand the effects of sterilization by repeated boiling or by any other disinfecting process.

GAILLARD'S Gum Catheters and Bougies are guaranteed to remain non-adhesive, to retain their form, and to keep in perfect condition in any country, even under very unfavorable climatic conditions. They are guaranteed to last a long time.

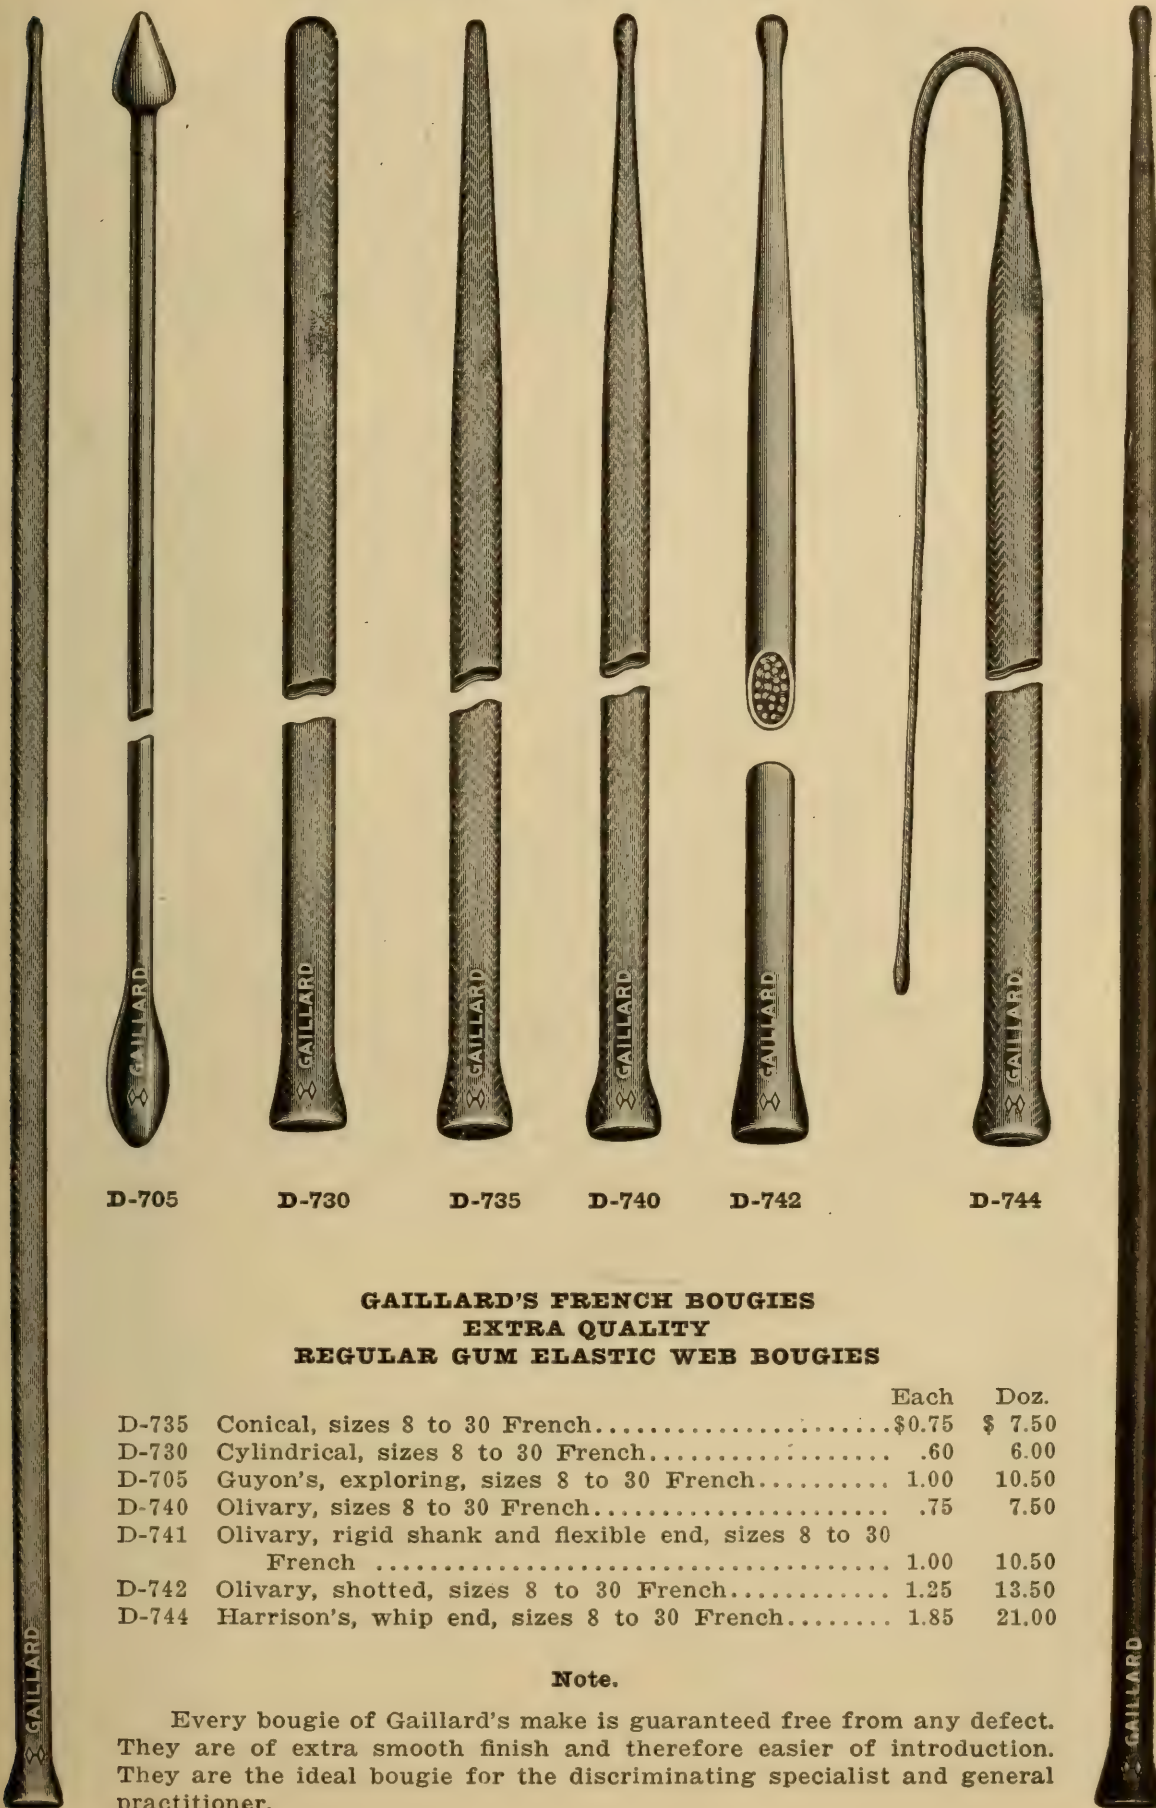

By appointment contractor to the hospitals and medical faculty of Paris; to army, navy, and government offices; the Necker Hospital (Department for the treatment of urinary diseases under Prof. J. Albarran); sole contractor to General Hospital of Mexico; and other hospitals and the medical faculties of France and elsewhere.

GAILLARD'S BOUGIES listed and illustrated on page 425.

GAILLARD'S CATHETERS listed and illustrated on page 436.

GAILLARD'S URETHRAL CATHETERS listed and illustrated on page 448.

Used in the new heating treatment of gonorrhea. Set comprises an Anterior, Posterior and Prostatic Sound. Water at a temperature of 120 degrees is allowed to flow through the sound for 30 minutes. The operator then proceeds with his medicinal irrigation. The most stubborn cases of gonorrhea yield readily to this treatment.

*D-1018	Cooler, the Zerodone, complete with haemorrhoidal and prostatic cooling sounds	7.00

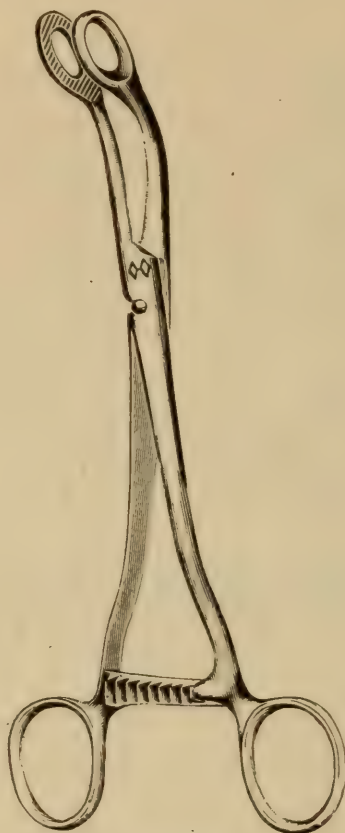

The Zerodone is a cooling apparatus for the treatment of internal Haemorrhoids, Acute and Chronic Prostatitis and Irritable Bladder.

The peculiar feature of this elegant contrivance is a water chamber from which, by means of the working of a rubber bulb, a double current passes through a cylinder inserted into the rectum. There is no connection with a fountain syringe, as the instrument is complete in itself. The most practical instrument made for chronic inflammations of the prostate and rectum.

CYSTOSCOPES

NOTICE

We wish to call the attention of the profession to the fact that the "Braasch" cystoscopes listed below are made by the Electro Surgical Instrument Co. of Rochester, N. Y. The models made by this firm are the only ones sanctioned and used by Dr. W. F. Braasch. Inferior makes that have not produced satisfactory results have been placed on the market, and it is our desire only to see that you secure the authorized models.

CYSTOSCOPES

D-1348. The "Braasch" Direct Catheterization Cystoscope

Designed by Dr. W. F. Braasch of St. Mary's Hospital, Rochester, Minnesota. It is a modification of the Lewis and the Elsner, differing from them principally in that the catheter guides are removable. They are held firmly in place by small flanges which project slightly into the lumen of the tube. The beak is small and tapered, making introduction easy. The thickness of the walls has been lessened, reducing the outer calibre and enlarging the lumen of the tube. The removable catheter guide can be rendered surgically sterile, and when it is not in use the cystoscope can be used for diagnostic purposes. The cystoscope was designed for water dilatation but may be used with air if preferred. The calibre is No. 24 French scale and the length 21 cm. It is simple, effective and the most practical instrument for the general practitioner that has been designed up to date.

Besides the regular double catheter guide we are now, at Dr. Braasch's suggestion, prepared to furnish two large single catheter guides, one taking a No. 7 and the other a No. 9 catheter, and these guides are also used for fulguration of the bladder.

Price, with double catheter guide, ocular window and extra lamp.....	Net \$34.00
Price, complete as above, with 2 silk catheters and dilating bulb.....	Net 42.50
Price, large single catheter guide, extra.....	Net 5.50
Price, case covered with genuine leather, seal grained.....	Net 3.50

D-1348A. THE "BRAASCH" CHILD CYSTOSCOPE

Dr. Braasch has designed a new cystoscope for diagnosis and ureter catheterization of children. It is constructed along the same lines as the regular Braasch direct catheterization cystoscope, except that it has a single removable catheter guide. This instrument is furnished in a length of 11 cm. and with a calibre of 16 French.

Price, with catheter guide, ocular window and extra lamp.....	Net \$34.00
---	-------------

D-1348B. THE "BRAASCH" INDIRECT CATHETERIZATION CYSTOSCOPE

This instrument is a modification of the Braasch direct view cystoscope for those who prefer a lens system, and it is now equipped to show corrected image. As with the direct view Braasch, the catheter guides are on the convex side of the tube—opposite the beak—so that it is not necessary, for catheterization, to turn the instrument on its long axis after entering, and before leaving the bladder, and the ureter catheters do not require so great a deflection to bring them into line with ureter openings.

Dr. Braasch particularly recommends this instrument in cases of enlarged prostate, where his direct catheterization cystoscope cannot be used to best advantage.

This cystoscope is 19 cm. long to curve of beak and 24 French, in calibre. The periscope with catheter guides is placed in position after the obturator is withdrawn. Two stopcocks are provided for irrigation.

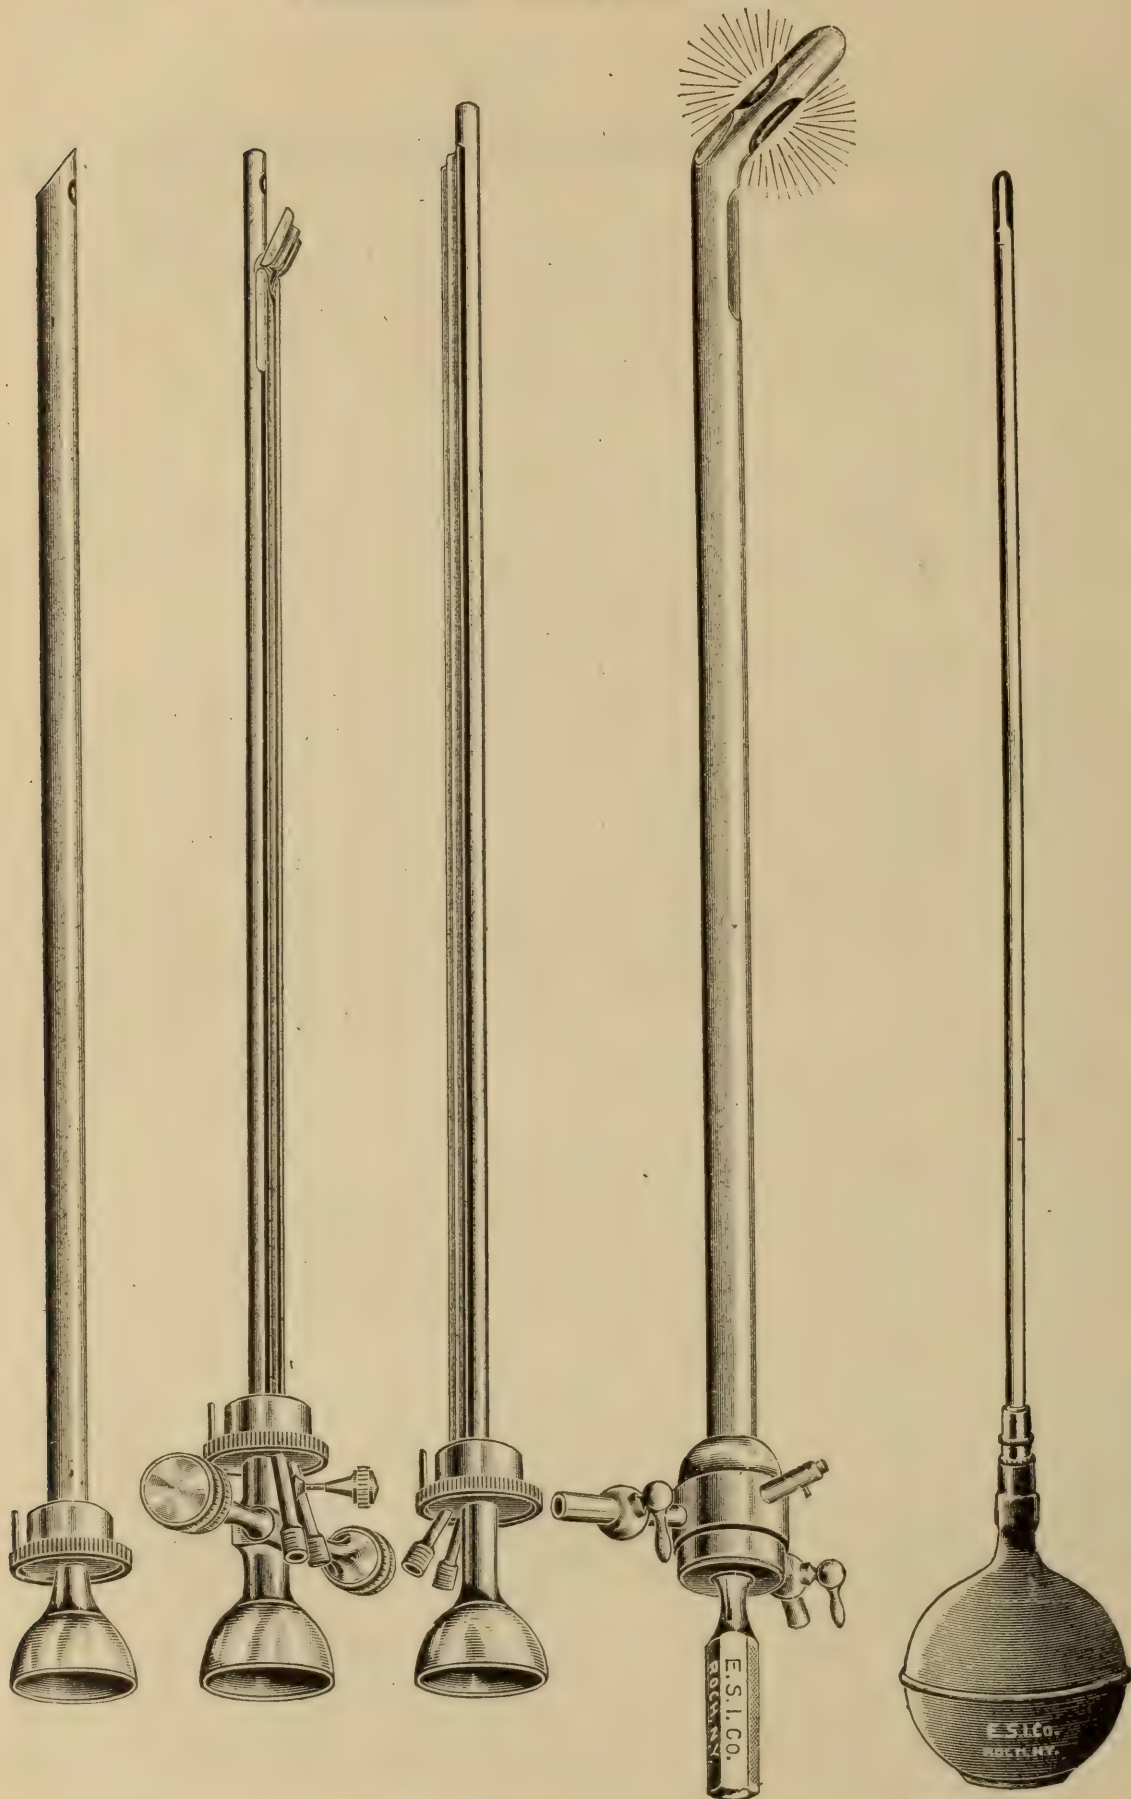

Price, complete, with extra lamp.....	Net \$65.00
---------------------------------------	-------------

D-1338. "NITZE" DIAGNOSTIC CYSTOSCOPE

This examining cystoscope gives a clear, magnified vision of the pathological conditions of the bladder, and brings out all details clearly. The tube has a rounded curved beak to facilitate introduction, and is 18 French in calibre and 22 cm. long to the curve of the beak. It is equipped with our tungsten lamp, giving a most brilliantly illuminated field, while the temperature of the lamp remains practically the same as that of the tissues under examination.

Price, with extra lamp.....	Net \$35.00

VESICAL INSTRUMENTS

D-1346

CYSTOSCOPES

D-1346. THE "E. S. I. CO." DIAGNOSTIC CYSTOSCOPE

This instrument is so arranged that either air or water may be used as a dilating medium. It is designed for diagnostic work, for removing caluclii and other foreign bodies, and for making direct applications, etc. Its advantages are its small calibre, the fact that it can be used for either air or water dilatation, that direct applications can be made to diseased tissue, and its cold lamp, giving brilliant illumination.

This instrument has a calibre of No. 20 French scale and a length of 20 cm. The female cystoscope has a calibre of No. 28 French scale and a length of 10 cm.

Price, Male, with extra lamp, obturator and window.....Net \$22.00
Price, Female, with extra lamp, obturator and window.....Net 22.00
Price, Dilating Bulbs, extra.....Net 1.50

D-1347. THE "E. S. I. CO." COMBINATION CYSTOSCOPE

This instrument represents the very latest advance in the art of cystoscopy, comprising as it does the best features of the Tilden Brown, the Cabot, the Ayres and other good models. The calibre is small. No. 23 French, the length about 20 cm. The lamps are cool and give brilliant illumination, the catheter guides are attached to the outer wall of the direct periscope, so that the instrument when not being used for ureter catheterization is available for diagnostic and treatment work. Two periscopes are furnished, one for direct, the other for angular inspection. It is provided with two stop cocks to facilitate irrigation. Air or water may be used for dilatation.

Price, complete, with 3 periscopes, obturator, water-tight window and extra lampNet \$95.00
Price, complete, as above, with 2 silk ureter catheters.....Net 99.00
Price, additional periscope, large, direct.....Net 15.00
Price, additional periscope, retrospective.....Net 18.00
Price, dilating bulbs.....Net 1.50
Price, case, covered with genuine leather, seal grained.....Net 3.50

Space does not permit of full detailed description. We will be glad to mail special circular if you are interested.

CYSTOSCOPES

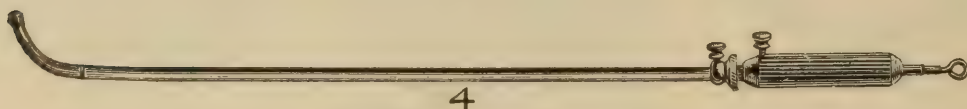

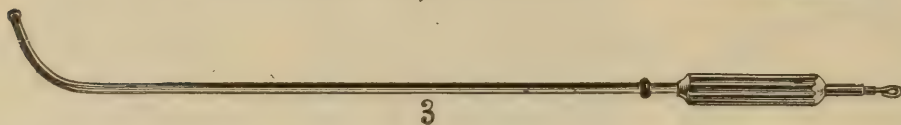

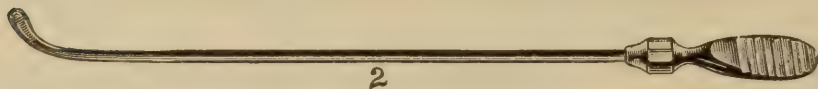

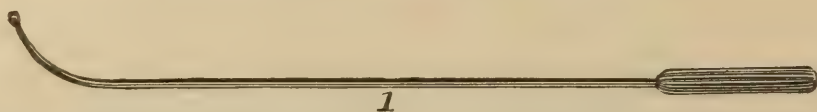

*D-1345. Bransford Lewis' new and improved cystoscope consists of: 1, sheath with obturator, Fig. A, the former affording illumination of the whole interior of the bladder by fenestration of its beak on both convexity and concavity; 2, telescope for direct double urethral catheterization, Fig. B; 3, telescope for indirect ureteral catheterization with right-angle lens, Fig. C; 4, telescope for retrospective view, non-catheterizing, Fig. D; 5, electric cable, with cut-off switch attached, placing control of the light in the hands of the operator.

Complete Universal cystoscope in case.....Net \$100.00

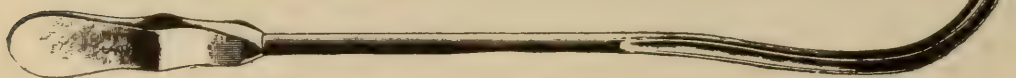

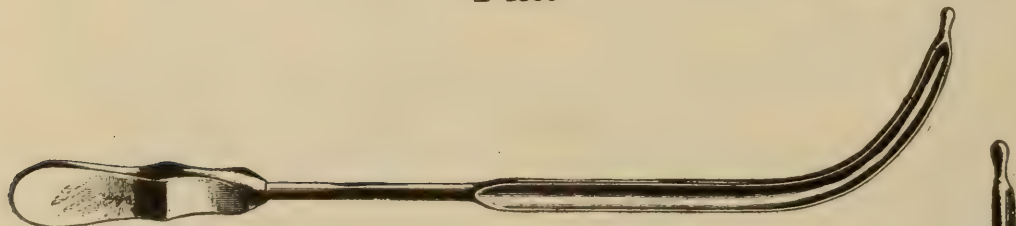

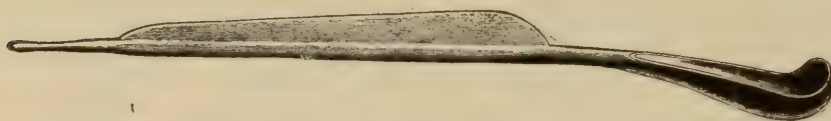

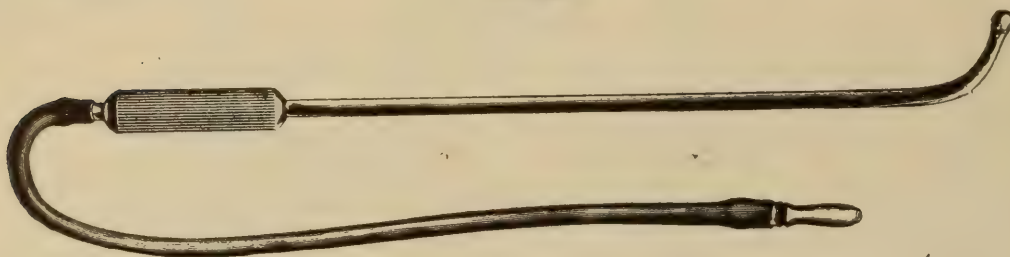

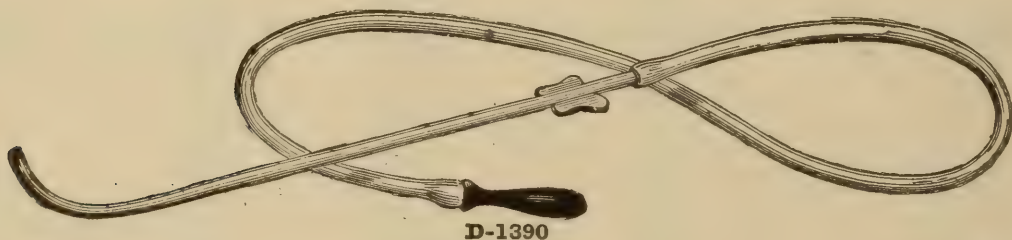

In addition to the above outfit, non-catheterizing telescope for direct forward view, Fig. E, and non-catheterizing telescope for indirect, right-angle view, Fig. F, can be furnished.

Complete set, including 5 telescopes enumerated, in case.....Net \$135.00

Gaillard's ureteral catheters are made in sizes 4, 5, 5½, 6, 6½, 7, 7½ and 8 French scale.

Gaillard's ureteral catheters are made exclusively of a special quality of the finest unbreakable silk web.

Gaillard's ureteral catheters are made with large lumen, insuring rapid and perfect drainage.

D-1530, D-1535, D-1540, D-1542 and D-1546A are carried in stock, other styles being imported on order only.

E-132. DR. DON H. PALMER'S SELF-RETAINING VAGINAL SPECULUM FOR IMMEDIATE REPAIR OF THE PERINEUM

Patent Pending

**E-132**

Sectional view showing speculum in position.

The primary repair of the perineum is one of the most important features of the obstetric work of every general practitioner and often one of the most difficult to perform, due to the lack of skilled assistants and the inability to obtain a satisfactory view of the operative field.

To overcome these difficulties I have designed this instrument, which is small, light, simple and self-retaining. It is quickly applied, gives the operator a full view of the anterior and posterior walls, the use of both hands, and immediate repair may be made in an easy, bloodless and satisfactory manner. A glance at this illustration of the instrument together with the sectional view of the anatomy will give a clear conception of the retaining principle. Circular giving full description mailed upon request.

Pricenet \$7.00

E-134. CAMERON'S VAGINAL SPECULUM

This instrument is self-retaining and is very simple, consisting of only two pieces of sheet steel, heavily nickel plated over copper. The two parts can be **instantly dismantled** and folded into small space.

When in position the instrument will **automatically lock** at any point desired by pressure made at the distal extremities, which causes the long shank to bind on the margin of the slot.

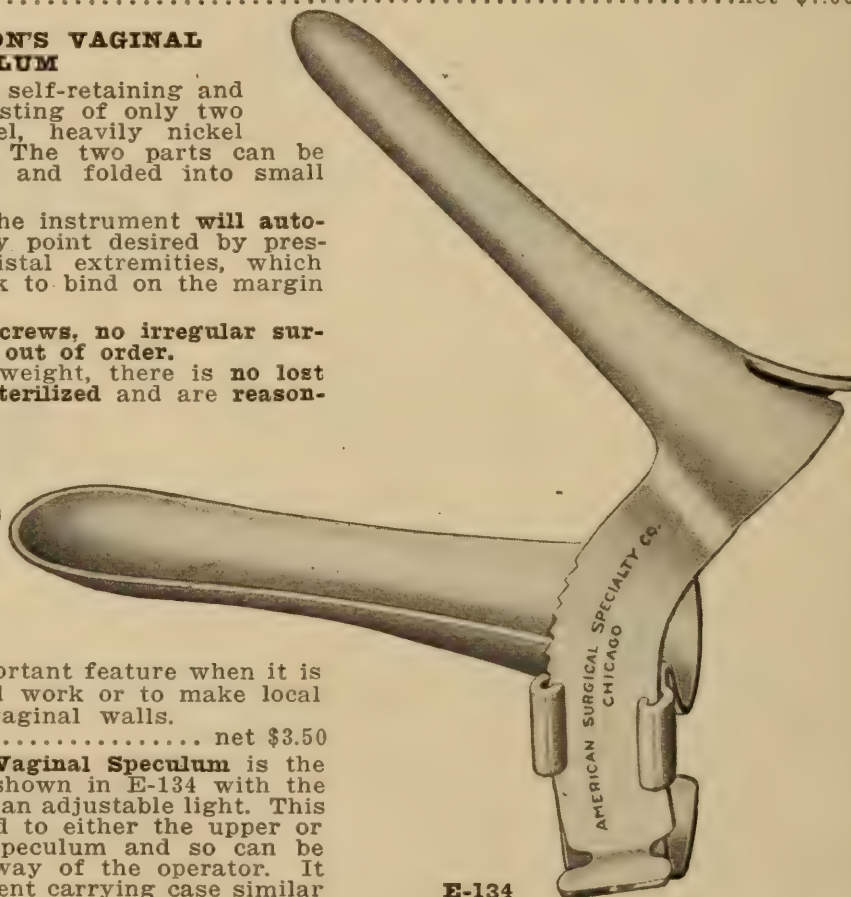

There are **no set screws, no irregular surfaces, nothing to get out of order.**

They are light in weight, there is **no lost motion, are readily sterilized** and are **reasonable in price.**

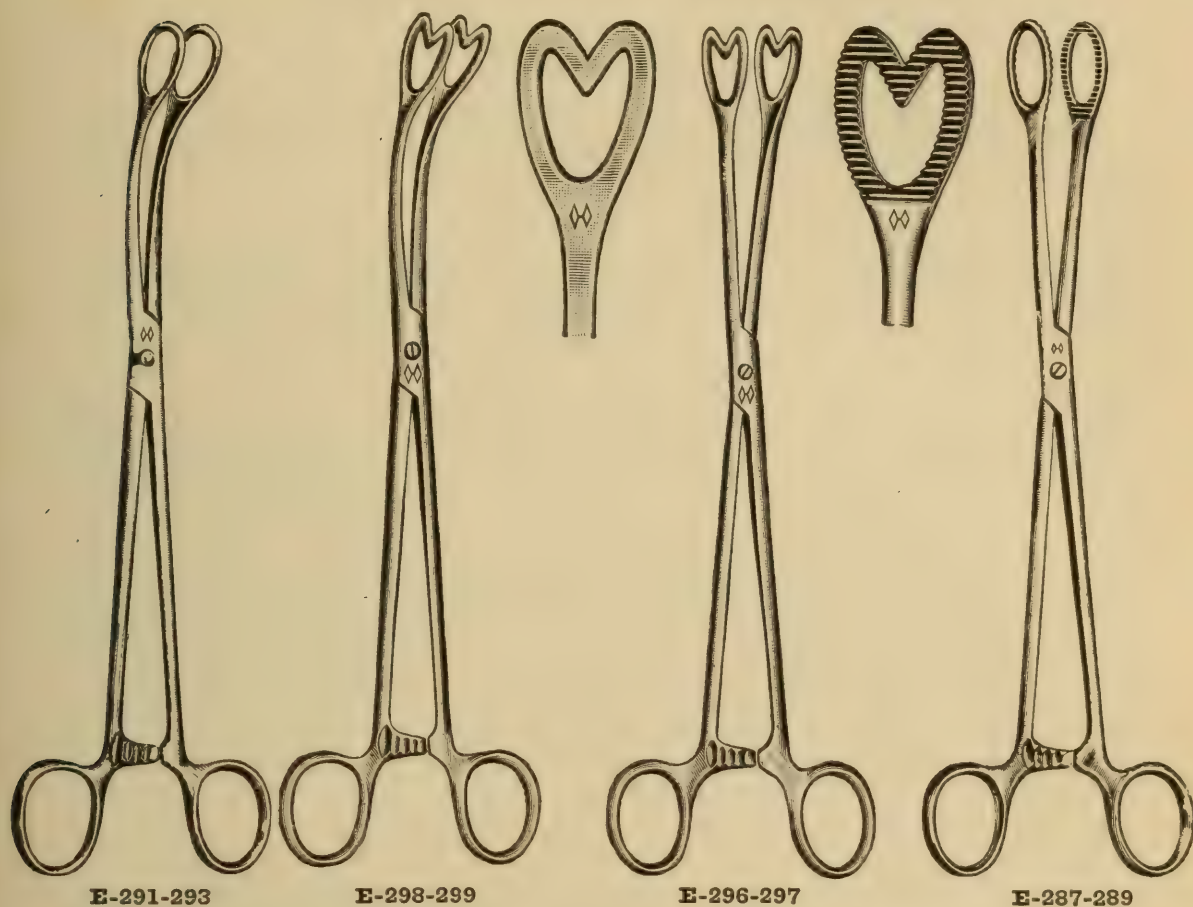

This speculum will more nearly meet all your requirements than any other. The anterior blade is shorter than the posterior blade. The speculum is so compact that it may be used in any position in the vagina, an important feature when it is desired to do urethral work or to make local applications to the vaginal walls.

Pricenet \$3.50

Cameron's Electro-Vaginal Speculum is the same instrument as shown in E-134 with the additional features of an adjustable light. This light may be attached to either the upper or lower blade of the speculum and so can be mounted out of the way of the operator. It is put up in a convenient carrying case similar to the Electro-Oral Assistant shown on page 345. Price, complete with case, Ever Ready battery and electrical connections.....\$7.50

E-235	Gauze Packer, McDade's, cervical director	1.75

This is the latest and most improved invention for packing the uterus to prevent hemorrhage. To introduce gauze through the McDade Cervical Director any ordinary blunt instrument or dressing forceps may be used to push the gauze forward. The jaws close automatically, thus preventing gauze from being drawn back.

Note.—We call special attention to the Douglass point that we use on our uterine dilators. This point is well shown in Figs. A, B, C, D, E and F. It has two distinct advantages: first, an easy introduction; secondly, it eliminates the danger of pinching the tissues in withdrawal. We furnish this point with all our dilators unless otherwise specified.

OBSTETRIC INSTRUMENTS

**E-1782. DEWEES' AXIS TRACTION FORCEPS**

A, superior blade; B, inferior blade; C, traction handle; D, complete forceps

To Illustrate Correct Axis-Traction by Dewees' Forceps

The axis-traction principle lies in making traction in a line following the exact axis of the true pelvis, from brim to outlet. Correct traction meets with equal resistance anteriorly and posteriorly, with less tractile force, less compression on the child, less damage and risk to the maternal soft parts, and favors spontaneous rotation. Therefore, a correct knowledge of the child's position and the shape of the birth canal, and the skillful use of this simplified and dependable axis-traction device, enables us to make a more easy and speedy delivery with less risk to both mother and child.

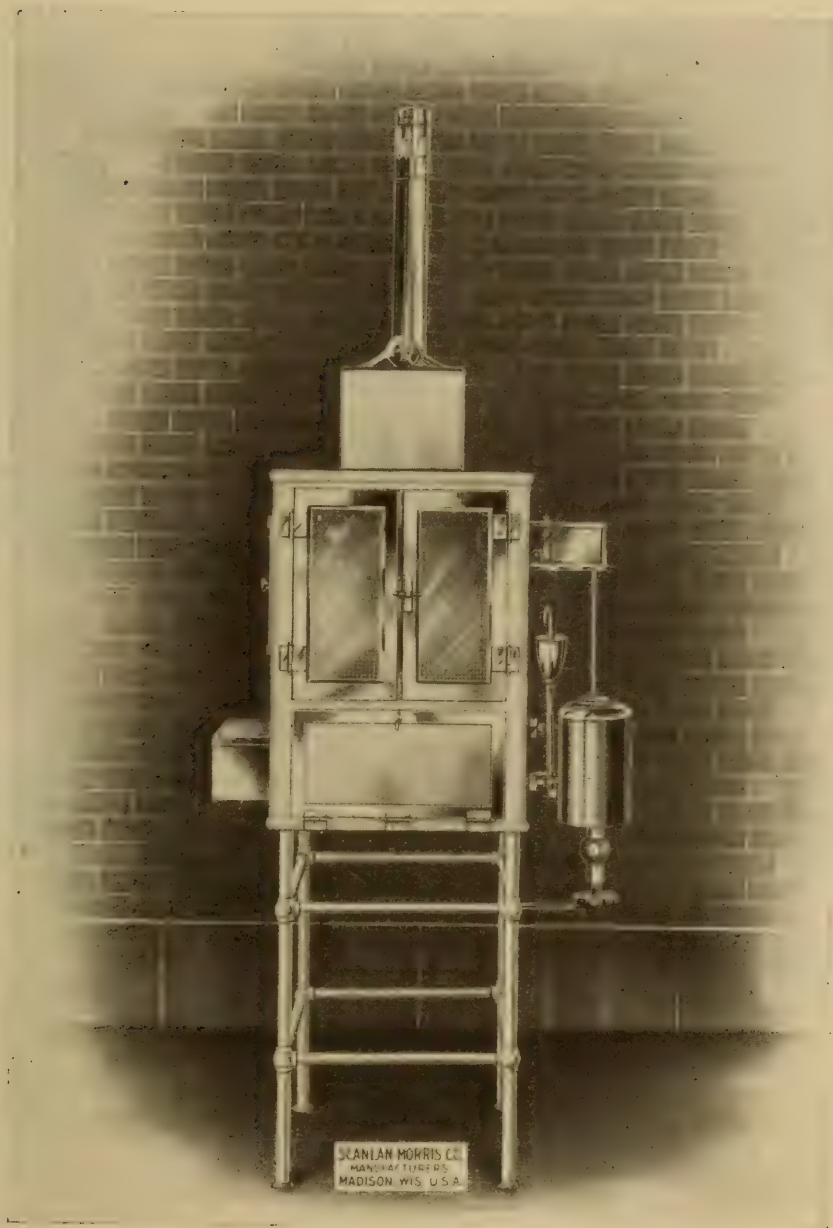

This new forceps does away with the complicated and cumbersome attachments of the Tarnier Forceps and other models. Its most important new feature is the construction of the perineal curve with a dependable indicator, and providing the same in the handle which serves for traction.

The proper use of this new forceps makes axis-traction perfect, easy and simple. The indicator is constantly in the sentient hand of the operator, who thus at every moment knows exactly through his eye and conscience musculaire, the direction of correct axis-traction.

Price\$17.50

THE DeLEE INFANT INCUBATOR

INCUBATOR

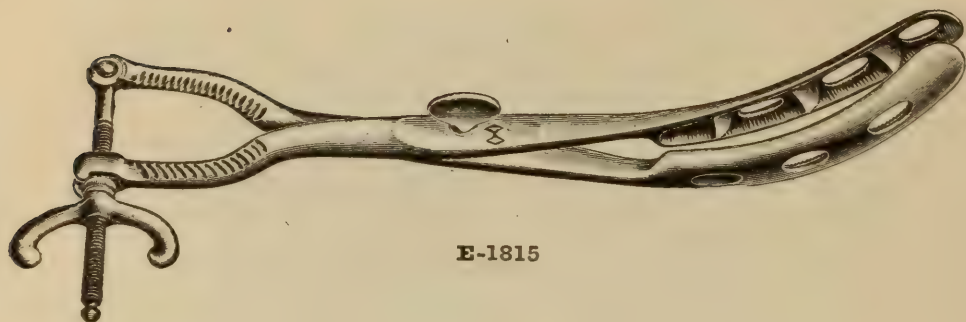

Infant Incubator, devised by Dr. J. B. DeLee; in use at the Chicago Lying-in Hospital

The DeLee incubator is built of steel and glass, so constructed as to permit of the thorough cleansing of all parts. All parts of the apparatus are carefully and accurately made. The body of the incubator and stand are finished in aluminum bronze; the doors fitted with plate glass.

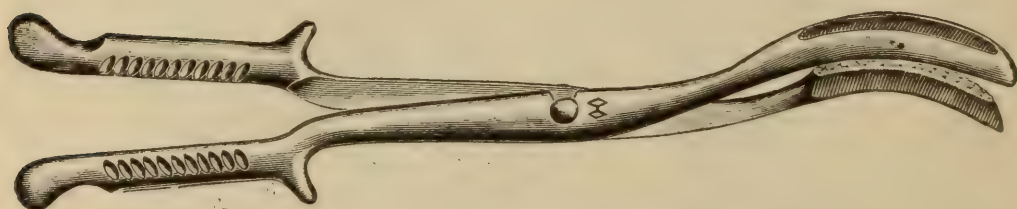

Circular giving full description and price mailed upon request.

High Frequency Outfits	

ELECTRICAL

F-1. VICTOR IMMERSION ELECTRIC HEATING UNIT

Simply connect the unit to any electric light socket, place it in the receptacle (completely immersing it) containing the water to be heated and hot water or other liquid is available in from two to ten minutes, according to the amount of liquid in the container.

Rust-proof and aseptic. Dimensions, length $7\frac{1}{4}$ inches, diameter $1\frac{3}{8}$ inches.

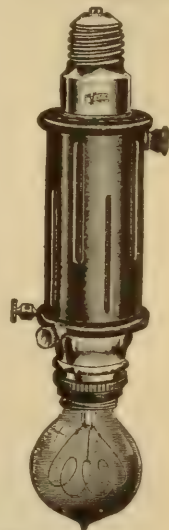

Price, arranged for the 110 or 220 volt direct or alternating current\$4.00

Electric Illuminating Apparatus

F-4. VICTOR SOCKET CONTROLLER FOR MINIATURE LAMPS

Made according to suggestions furnished by Dr. Otto Freer of Chicago. Controls all types of endoscopic and other instruments using electric lamps of the miniature type.

Price, complete with 32 candle-power resistance lamp, arranged for the 110 volt current.....\$7.50

F-16. THE ELECTRO SURGICAL INSTRUMENT CO. SOCKET CURRENT CONTROLLER

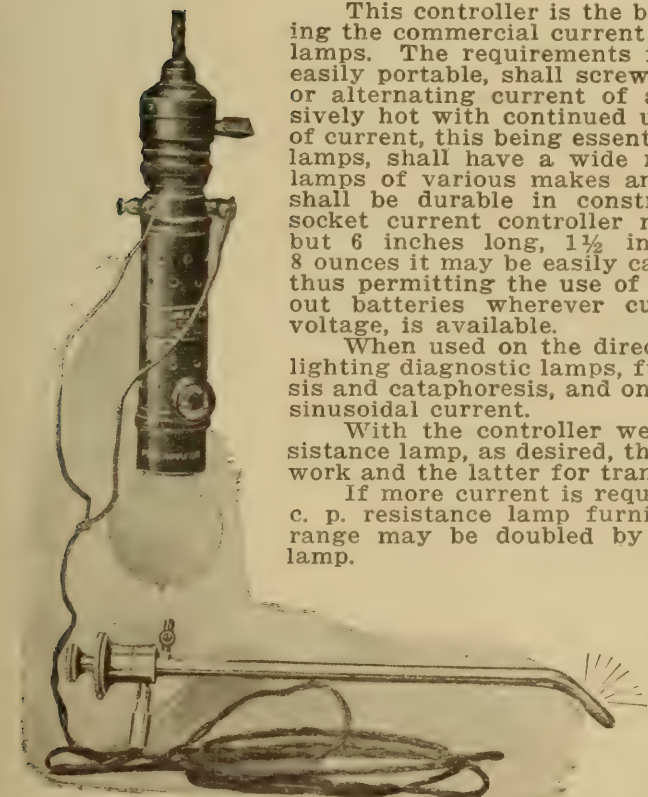

This controller is the best appliance on the market for reducing the commercial current for the purpose of lighting diagnostic lamps. The requirements for such a device are that it shall be easily portable, shall screw into any lamp socket, work on direct or alternating current of any voltage, shall not become excessively hot with continued usage, shall give the finest graduation of current, this being essential for the safe lighting of the smaller lamps, shall have a wide range of graduation so that ordinary lamps of various makes and voltage may be effectively lighted, shall be durable in construction and reliable in action. Our socket current controller meets all these requirements. Being but 6 inches long, $1\frac{1}{2}$ inches in diameter and weighing but 8 ounces it may be easily carried in the pocket or instrument bag, thus permitting the use of electrically lighted instruments without batteries wherever current, direct or alternating of any voltage, is available.

When used on the direct current, the controller will, besides lighting diagnostic lamps, furnish a current suitable for electrolysis and cataphoresis, and on the alternating a perfectly graduated sinusoidal current.

With the controller we furnish either a frosted or blue resistance lamp, as desired, the former being preferable for ordinary work and the latter for trans-illumination.

If more current is required than can be obtained with the 16 c. p. resistance lamp furnished (unless otherwise ordered), the range may be doubled by using a 32 candle power resistance lamp.

The conducting cords attached are fitted with our latest universal spring bayonet connection, which locks the diagnostic instrument securely to the cords. When ordering please state whether socket on which controller is to be used is Edison or other style and specify voltage of street current, since the voltage of resistance lamp must correspond with that of the current. Unless otherwise ordered, we furnish a 110-volt, 16 c. p. frosted lamp.

Price, complete with resistance lamp (frosted or blue) and a pair of silk or rubber covered conducting cords, \$10.00.

ELECTRICAL

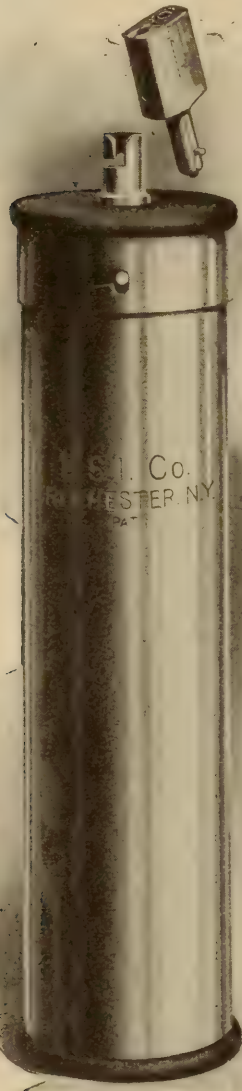

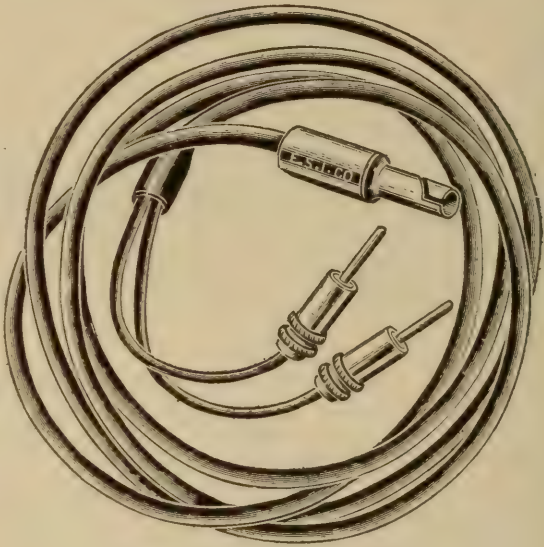

F-6. CONDUCTING CORDS

Our conducting cords (lamp cords) made of the highest grade of cordage obtainable, are six feet in length, and are furnished with silk covering unless rubber covered cords are particularly specified. Either style is supplied at the same price. The cords are fitted with our universal spring bayonet connection, which fits all of our instruments and which locks the instrument securely to the cords so that it cannot be accidentally detached when in use. The cords themselves are perfectly flexible and practically unbreakable.

Make-and-Break Attachment

When so ordered we furnish these cords with a make-and-break attachment on the bayonet connection so that the current can be turned on or off with a slight movement of the thumb.

F-6 Price\$1.50
Price, with make-and-break attachment..... 2.50

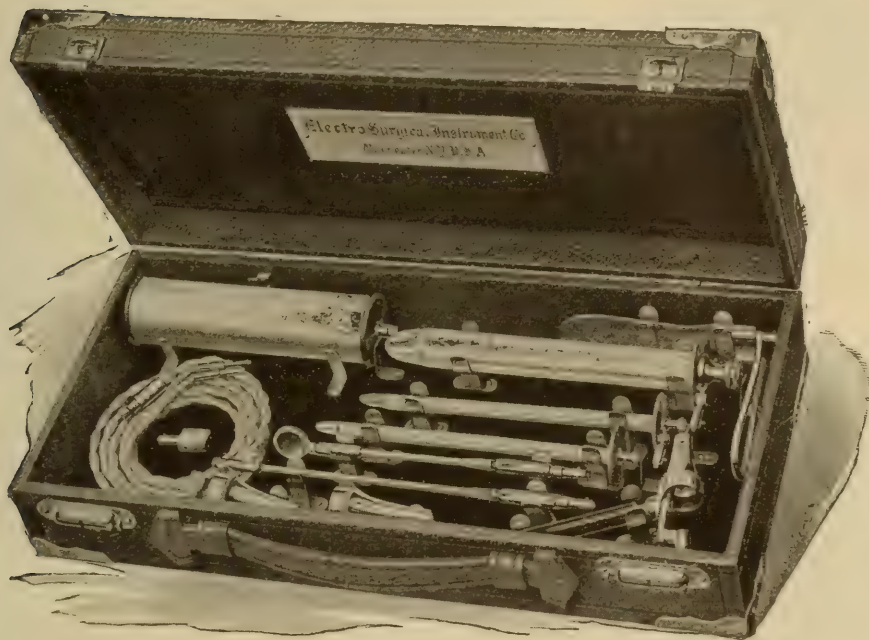

F-8. "E. S. I. CO." TUNGSTEN BATTERY

This battery is only 6 inches high by 1½ inches diameter. It weighs 8 ounces and is easily carried in the pocket and this is of great convenience during operations. It is fitted with the E. S. I. Co. patented universal spring bayonet connection to which instruments can be directly attached in a fraction of a second, thus making it form a handle, but when this is not desirable the adapter is inserted into the connection of battery and to this adapter the conducting cords are attached and is operated in same manner as any other battery. The use of this battery makes the operation of electrically lighted instruments as easy and convenient as the pressing of the button on a pocket flashlight, and the maintenance is but a trifle, the cells used are standard and of the highest quality and are furnished direct by us or by dealers in auto or electrical supplies anywhere. These cells are guaranteed to give an intermittent light of 20 hours or a continuous light of 10 hours, which means that the battery will give the operator an average service of about three months.

F-8 Price, including cells.....\$3.00

ELECTRICAL

ELECTRIC ILLUMINATING APPARATUS

**F-18. E. S. I. CO. GENERAL DIAGNOSTIC OUTFIT**

The utility of this outfit has been multiplied many times by the adoption of Tungsten Lamps and the employment of our Tungsten Battery. The weight (including instruments) is reduced from 16 pounds to $4\frac{1}{2}$ pounds by doing away with the heavy batteries and rheostat that were formerly necessary. The outfit is now carried with the greatest convenience, while the cost of maintenance has also been materially reduced. Physicians who were content to do without the outfit now consider it indispensable.

As shown in the illustration the instruments are all securely held in heavily nickel-plated clamps, which are screwed to the rheostat board, the whole making a most convenient outfit, especially valuable for use at the bedside where the light is usually poor and the patient's position unfavorable for the use of a head mirror.

Any of our instruments may be assembled in this outfit as desired. Those listed are usually chosen, and are furnished unless otherwise ordered.

If desired any instrument may be left out, with corresponding reduction in price, or others, such as a vaginal speculum, eye spud, sigmoidoscope, or cystoscope, etc., may be substituted or added, and all may be operated with battery, socket current controller, wall plate or transformer.

- 1 Tungsten Battery with adapter and conducting cords.
- 1 Auriscope, Style B, with three specula (furnished with or without handle).
- 1 Laryngoscope.
- 1 Tongue Depressor.
- 1 General Diagnostic Illuminator.
- 2 Koch Urethroscope (any sizes).
- 1 Light Carrier for Urethroscopes (interchangeable).
- 1 E. S. I. Co. Proctoscope (any size).
- 1 Light Carrier for Proctoscope.

F-18 Price, complete	\$40.00
F-18A Price, without proctoscope.....	33.00
F-18B Price, with E. S. I. Co. socket current controller instead of battery, and instruments as listed.....	45.00

ELECTRICAL

Electric Batteries

F-170. McINTOSH DOMICILE BATTERY

A very neat design in Dry Cell Faradic Battery adapted to home use. Contains a first-class induction coil and is supplied with a large dry cell of standard size. The starting switch is so arranged that it must be turned off before the lid is closed, thus insuring the life of the cell. It is put up in a handsome oak case, dark old English finish. A most reliable, substantial outfit and one that is sure to give satisfaction. Contains the following accessories: 1 pair conducting cords, 1 pair Universal wooden handle with Spongio discs, 1 pair metal handles, 1 nickeled foot plate, 1 pamphlet of instructions.

Price\$7.50

F-195. McINTOSH NO. 66 PRACTITIONER'S FARADIC BATTERY

A most compact, serviceable Faradic battery especially suitable for visiting use, containing two standard size dry cells, put up in a handsome case of selected quartered oak finish, finely polished, measuring 9x6x7½ inches. The induction coil, containing both primary and secondary windings, is finely finished in polished hard rubber and is attached to a handsome enameled slate base. The strength of current can be regulated perfectly by drawing out the shield. In the top of the lid is a compartment containing the following electrodes: 1 pair of conducting cords, 1 pair Universal handles with Spongio discs, 1 pair metal handles and finely nickeled foot plate.

Price, complete.....\$12.00

F-175. McINTOSH ELECTROLYSIS BATTERY

This battery contains six No. 4 Columbia dry cells put up in a neat, leather finished, plush lined case containing a compartment for the instruments furnished. The dry cells will last for six or nine months with ordinary use. The following accessories are included: 1 pair conducting cords, 1 hard rubber needle holder, 6 Hayes' bulbous-pointed steel needles, 2 steel brochures, 1 pair forceps, 1 No. 3 hand Spongio electrode, 1 pair No. 1 handles and Spongio discs, 1 copy Hayes' "Electricity in Facial Blemishes." A most reliable and satisfactory outfit at a minimum of price. Price.\$13.50

F-180. McINTOSH 14 DRY CELL COMBINED GALVANIC AND FARADIC BATTERY

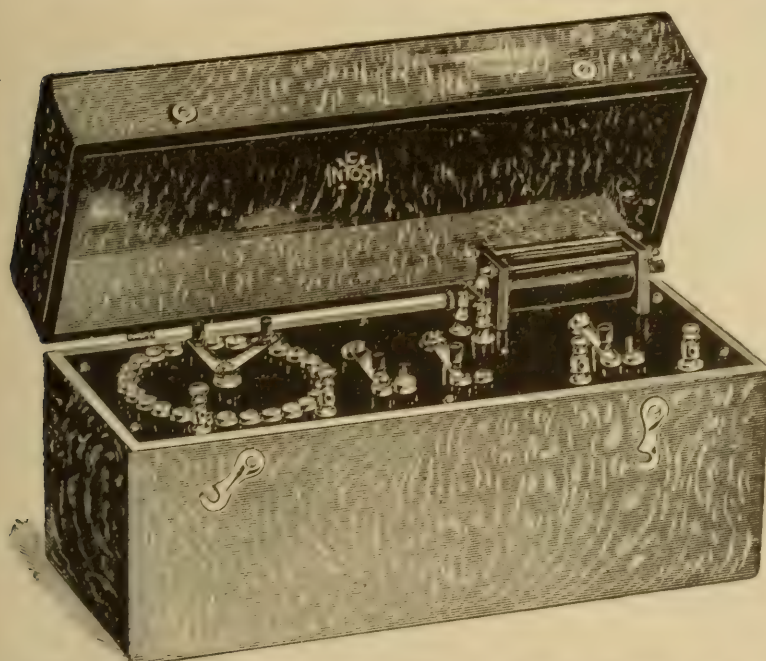

This outfit contains: 14 No. 4 Columbia dry cells, twelve in the galvanic portion and two connected with the coil. The galvanic cells are controlled by a cell selector switch. The galvanic current is of sufficient strength to treat any case where a mild current is indicated, being ample for the removal of superfluous hair and all facial blemishes, such as moles, warts, Naevi, etc.; it can also be used for lighting diagnostic lamps; the Faradic Coil gives a perfectly regulated faradic current of variable intensity. The battery is put up in a handsome plush lined, leather finished case and contains a compartment for electrodes in the lid.

Price, including connecting cords, Universal handles and Spongio discs.....\$20.00

Price, including a complete assortment of accessories for electrolysis and massage..... 25.00

ELECTRICAL

F-182. McINTOSH "SIMPLIFIED" 27 DRY CELL GALVANIC AND FARADIC BATTERY

This battery embodies those features counted essential in a simplified form of physicians' portable galvanic and faradic dry cell battery, adequate for the requirements of many of the operations requiring a current of moderate strength. It is of similar construction to the Fourteen Dry Cell Combined Battery, and is fitted with twenty-seven No. 4 Columbia dry cells—twenty-five being connected in the galvanic circuit and two utilized for the faradic coil.

Regulation of the galvanic current is afforded by a double cell selector switch enabling the operator to add single cells to the circuit, or to select cells from any part of the circle, the number of cells employed serving as an index to the strength of current utilized. An interrupting key permits

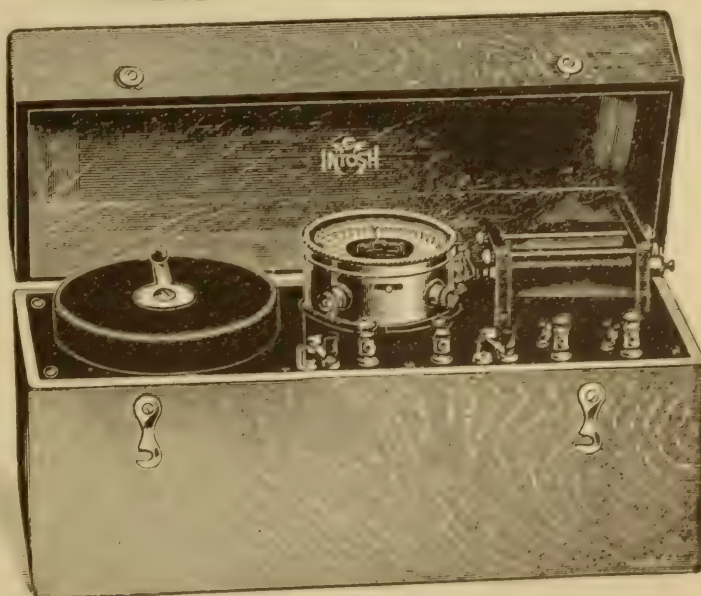

of an interruption of the galvanic current, which is especially useful for diagnostic purposes.

The faradic coil is of ample proportions and is fitted with a vibrator of smooth and even action, thus affording a very powerful and pleasing current, the strength of which may be varied by the sliding shield. The primary and secondary currents are selected by a suitable switch and are obtained from the binding posts adjacent to the coil.

The battery offers a very wide range of work, as it affords a constant galvanic current of sufficient intensity to suit almost any case, an interrupted galvanic current, a faradic current from either primary or secondary coil, a galvano-faradic current and a current to light diagnostic lamps.

The accessories of the battery are mounted upon a black enameled slate base, and the apparatus is enclosed in a handsome quarter-sawed oak case in the popular golden finish, measuring 7x9x17 inches.

Price, including Conducting Cords, Universal Handles and Spongio Discs.....\$27.50

F-185. McINTOSH "ELABORATE" 27 DRY CELL GALVANIC AND FARADIC BATTERY

In this battery the galvanic current is obtained from twenty-five No. 4 Columbia dry cells connected in series, controlled by the MacLagan Wire rheostat and measured by the McIntosh improved milliamperemeter, scale reading 0-150, and obtained from the binding posts facing the meter. An "on" and "off" switch permits of the meter being removed from the circuit when it is desirable to light diagnostic lamps of large capacity.

The faradic coil is similar to the one described above, being operated by two cells; the current obtained therefrom is brought likewise to a separate set of binding posts.

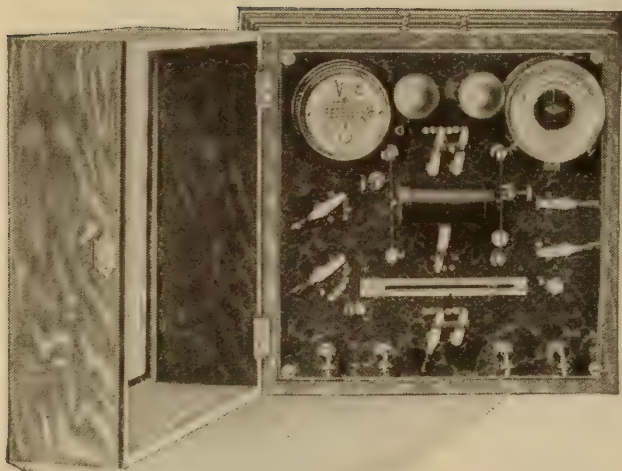

The greatly simplified system of wiring arrived at by connecting the galvanic and faradic circuits independently, adds greatly to the immunity from short circuit to the cells, and also permits of the galvanic and faradic currents being combined in a very simple and convenient manner.

This battery affords a galvanic current of great adaptability, a primary faradic current, a secondary faradic current, a galvano-faradic current, and a current to light diagnostic lamps.

The outfit is finished in the same general style as the one shown above, and is likewise put up in a golden oak case of the same dimensions.

Price, including Conducting Cords, Universal Handles and Spongio Discs.....\$37.50

ELECTRICAL

F-202. VICTOR NO. 2 WALL PLATE

Range of Service: Straight galvanism, primary faradism, secondary faradism, combined galvanism and secondary faradism and endoscopic light current.

This Wall Plate is provided with a voltage scale, a milliamperemeter and rheotome, and has an unusually refined control of all of the aforementioned currents.

This apparatus as shown operates from the direct current, and in the event alternating current only is available, it will be necessary to purchase an Electrolytic Rectifier or preferably a Generating Set, both of which are illustrated elsewhere in this catalogue.

The switchboard is of beautiful marbleized slate and the cabinet of golden oak.

Price, arranged for the 110-volt direct current.....\$75.00
 Price, arranged for the 220-volt direct current..... 90.00

F-218. VICTOR COMBISTAT

The modalities available from the Combistat are as follows: Straight galvanism, surging galvanism, slow sinusoidal, rapid sinusoidal, multiplex sinusoidal, surging sinusoidal, endoscopic light current, cautery current, nasal drilling, compressed air, suction, pneumatic massage, vibratory massage, etc., etc.

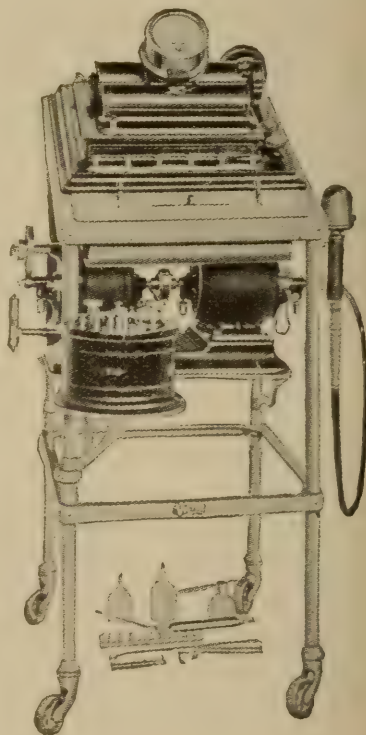

A universal, compact and useful apparatus, applicable in all branches of medicine regardless of the specialty. The Combistat is of unusually flexible design, which permits of a number of practical combinations to suit the individual requirements of the physician.

The Combistat is built on the unit plan of construction, which means that a comparatively simple apparatus may be purchased at the onset and extra units be added from time to time as the additional modalities are desired.

The entire outfit is mounted on easy rolling casters and occupies but little space.

The physician who desires practically complete electro-therapeutical service will do well to investigate the Combistat.

Write for special Combistat bulletin, which gives complete information and prices of the various combinations.

ELECTRICAL

McINTOSH WALL PLATES

F-220. McINTOSH TYPE 12 PLATE IN
STYLE "G" CASE

A unique combination of galvanic, faradic, cautery and rapid sinusoidal currents. Comprises rheostat, milliamperemeter, monomotive rheotome, faradic coil, cautery and sinusoidal transformer, dial selector, pole changer and resistance lamps mounted upon an aseptic porcelain steel plate 16 inches square encased in a handsome quarter-sawn golden oak cabinet with plate glass door. Affords the following modalities: Galvanic current, diagnostic lamp current, fast primary faradic current, fast secondary faradic current, slow primary faradic current, slow secondary faradic current, combined galvanic and faradic current, low potential rapid sinusoidal current (not grounded), high potential rapid sinusoidal current, combined galvanic and rapid sinusoidal current, cautery current.

Price, including conducting cords, handles, spongie discs and attachment plug with cord.....\$100.00

Price, with Rectifier with Potential Equalizer for 100-120 volt alternating current.....\$125.00

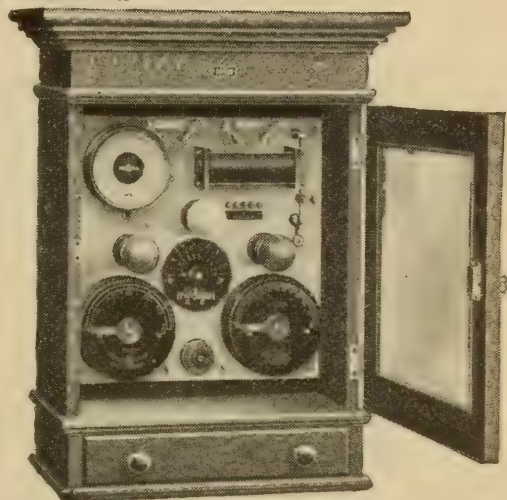

Price, with Motor Generator for 110-volt direct current.....125.00

F-222 McIntosh Type 14 Plate in Style "G" Case, practically the same as McIntosh Type 12 Plate, affording galvanic, faradic and sinusoidal currents, but omitting cautery transformer.

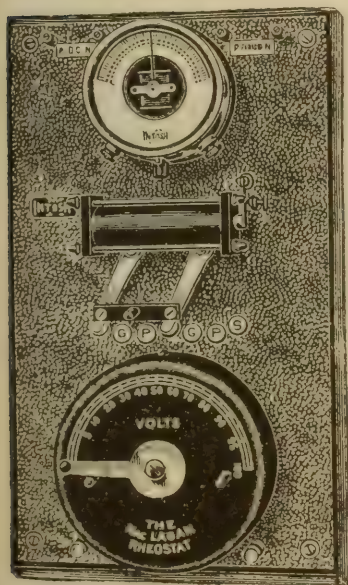

Price, for 110-volt direct current.....85.00

Price, including No. 1 Rectifier with Potential Equalizer for operation with alternating current.....110.00

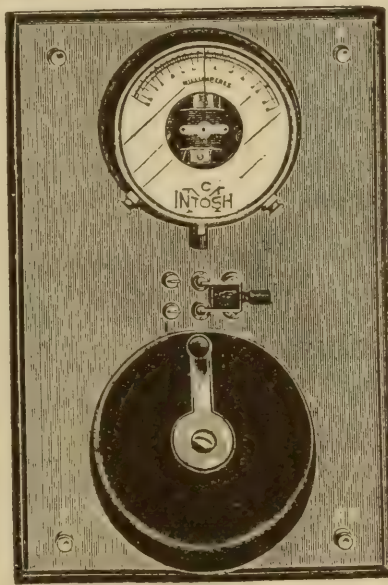

Price, including 50 National No. 7 liquid cells.....102.50

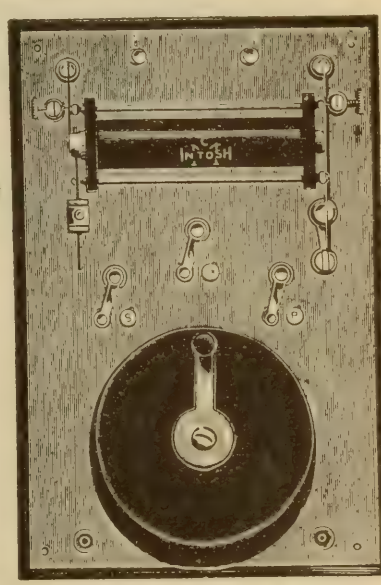

McINTOSH SIMPLIFIED WALL PLATES

F-200

F-186

F-188

F-200. McINTOSH NO. 7 WALL PLATE

A very simple plate affording galvanic and faradic currents. Comprises MacLagan Wire Rheostat, Milliamperemeter, Faradic Coil and Current Selector Switch, mounted on a neat marble base 9½x16 inches.

Price, including conducting cords, handles, spongie discs and attachment plug with cord.....\$35.00

Price in Style "H" Oak Case.....40.00

F-186. McINTOSH GALVANIC SWITCHBOARD

A very simple plate affording galvanic current. A McIntosh Improved Milliamperemeter with Shunt, MacLagan Wire Rheostat, Pole Changer. Can be used with cells, 110-Volt Direct Current or an "Alternating Current Rectifier" may be employed with the alternating current.

Price, including conducting cords, universal handles and sponge discs.....\$24.00

Price, series current tap, with cord.....1.25

F-188. McINTOSH FARADIC SWITCHBOARD

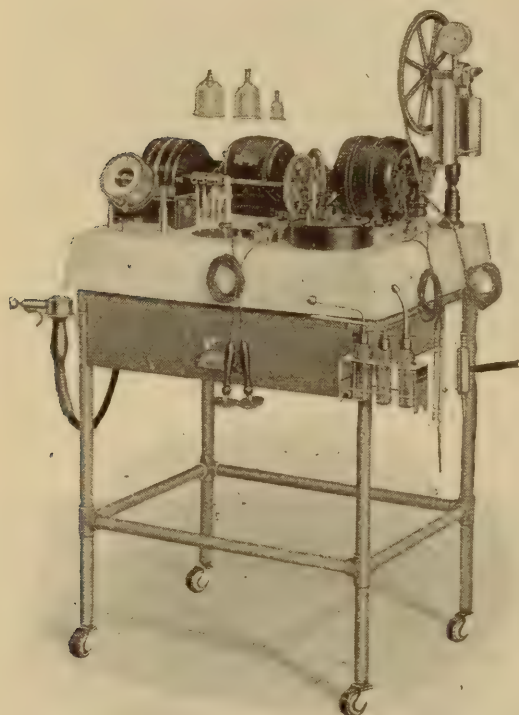

In this switchboard the base is a plate of highly polished marble, 9½x16 inches, upon which is mounted a Faradic Coil provided with two vibrators, one for giving coarse vibrations for the purpose of massage; the other a ribbon vibrator or so-called "Singing Rheotome," which gives a high rate of vibration and is especially adapted for producing local anaesthesia; Wire Rheostat, with all necessary switches for selecting Primary and Secondary Faradic Currents, together with the necessary binding posts to connect with the supply current and with the patient's circuit.

Price, including conducting cords, universal handles and sponge discs.....\$21.00

ELECTRICAL

F-226. McINTOSH UNIVERSAL MODE

A real universal apparatus. Combines practically every essential required for electro-therapy outside of X-Ray and High Frequency.

A beautiful white enameled, porcelainized steel switchboard, comprising rheostat, milliamperemeter, faradic coil, motor, direct current generator, cautery transformer, dial selector, pole changer and complete apparatus for generating both slow and rapid sinusoidal currents, as well as other modalities. Motor may be used to operate vibrator hand piece. A powerful tankless air pump affording compressed air up to 50 lbs., suction up to 30 lbs. and pneumo-vibration under absolute control from the most delicate pressure to the full intensity, is a most valuable feature.

All electric currents delivered by the apparatus are earth-free and ungrounded, hence no danger of a shock.

The apparatus affords the following modalities: Combined Galvanic and Faradic; Combined Galvanic and Sinusoidal 1,800 periods per minute; Rapid Sinusoidal 1,800 cycles per minute; Primary Faradic; Secondary Faradic; Galvanic; Interrupted Galvanic 3 to 88 interruptions per minute; Diagnostic Lamp; Cautery; Combined Galvanic and Faradic Wave 3 to 88 cycles per minute; *Superimposed Wave 3 to 88 cycles per minute; Surging Sinusoidal 6 to 176 periods per minute; Primary Faradic Wave 3 to 88 cycles per minute; Sec-

ondary Faradic Wave 3 to 88 cycles per minute; Slow Sinusoidal 3 to 88 cycles per minute; Interrupted Galvanic Wave 3 to 88 interruptions per minute; Mechanical Vibratory Massage; Nasal Drilling to remove obstructions; Electrically Heated Air; Pneumo-massage of tympanum, eye or skin; Spraying of liquids or powder blowing in nose or throat work; Vaporizing or nebulizing of oils; Deep Suction suitable for aspirating in congested sinuses; Bier's hyperemia.

ELECTRICAL

TREAT IT ELECTRICALLY

WITH A-

SINUSTAT

F-227. THE ULTIMA NO. 1 SINUSTAT**For 110 Volts Alternating Current**

An ideal method of electrical stimulation. Connect it to any lamp socket on the alternating current and it delivers a true rapid sinusoidal current highly agreeable in character. Handy to use in making calls and convenient to leave with the patient. Can also be used to light any cystoscope, urethroscope, trans-illuminator, or any diagnostic lamp. The rapid sinusoidal current is most valuable in neuritis, sciatica, lumbago and many gastro-intestinal conditions as well as uterine diseases.

The No. 1 Sinustat is a shunt current controller and affords absolute regulation of the voltage without shock. A special resistance permanently in circuit prevents burning out by accidental short circuit. By turning the knob the voltage is regulated from zero to one hundred volts. Finely finished in nickel and black enamel and enclosed in a substantial leather finished case 12 inches long, 7 inches wide and 3½ inches deep. Includes attachment cord and plug, conducting cords, handles and sponge electrodes.

PRICE, ULTIMA NO. 1 SINUSTAT, as described.....\$15.00

F-228. THE ULTIMA NO. 3 SINUSTAT

A powerful, efficient, slow sinusoidal apparatus for alternating current or direct current.

The only portable apparatus made which gives a true slow sinusoidal current and can be operated on either alternating or direct current. Does all that the large office outfits accomplish with the added advantage of being portable. It consists of a universal motor adapted to either A. C. or D. C., operating a rotary brush arm against a wire resistance, which increases and decreases the number of turns of wire automatically, thus generating a true sinusoidal current with a frequency of 10 cycles per minute; just the right frequency for stimulating the peristaltic action of the bowels—a valuable point in treating many gastro-intestinal conditions where loss of muscular tone exists.

The intensity of current is controlled by a special rheostat in the patient's circuit which permits of most delicate regulation of the dosage to be applied. By turning the knob the voltage is increased or decreased at will while the dial shows the exact voltage employed.

The apparatus embodies the best features of several of the leading sinusoidal machines. No belts or rubber friction wheels are used but a worm gear is employed to cut down speed to the low rate of 10 revolutions per minute for the brushes. All contacts are perfect and there is no possibility of the outfit needing repairs for many years if used with ordinary care.

HAVE YOU THE ALTERNATING CURRENT? The No. 3 Sinustat will afford you not only a **slow sinusoidal current**, but a **rapid sinusoidal** as well.

HAVE YOU DIRECT CURRENT? You can secure a **galvanic current** in addition to the **slow sinusoidal current** and **rapid sinusoidal current**.

You can light any diagnostic lamp, cystoscope, auriscope, etc., with this outfit. Current regulation is absolute.

All metal parts are highly finished in black enamel and nickel and are mounted upon an enameled slate base underneath which is contained the mechanism which generates the slow sinusoidal current, thus protecting these parts from dust and injury.

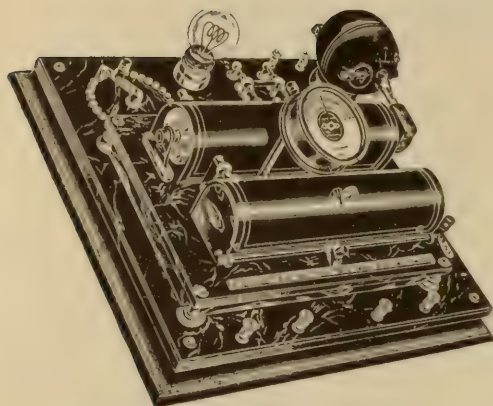

Over all is a substantial leather finished case, with a compartment for electrodes. It measures 7x16½x8½ inches and weighs but 18 pounds, hence you will find it extremely handy to use on your calls.

ACCESSORIES. Included are: Attachment plug and cord to screw into any lamp socket; conducting cords; pair of universal wooden handles; pair of felt discs for applying current; and pair of metal handles for testing current; full directions for applying.

PRICE, ULTIMA No. 3 SINUSTAT, as described.....\$60.00
Manufactured by Ultima Physical Appliance Co., 136 W. Lake St., Chicago, Ill.

ELECTRICAL

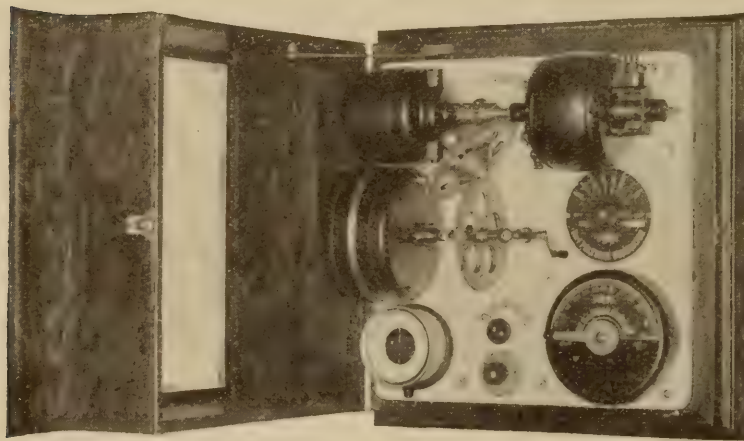

**F-232. VICTOR MULTIPLEX-SINUSOIDAL APPARATUS**

Range of Service: Straight galvanic current; surging galvanic current; rapid sinusoidal current; slow sinusoidal current; surging sinusoidal current; multiplex sinusoidal current. May also be used for lighting diagnostic lamps of the miniature type.

This apparatus is energized by the direct current and in the event the alternating current only is available, it is necessary to use either an electrolytic rectifier or preferably a motor generator set in conjunction with it.

This apparatus, in many instances, is considered a more useful apparatus than the ordinary galvanic and faradic wall plate.

Price, arranged for the 110-volt direct current, complete with milliamperemeter, one pair of electrode cords and one pair of electrodes.....\$130.00

F-234. McINTOSH NO. 4 POLYSINE GENERATOR

A big value at a reasonable price. Full range of galvanic and sinusoidal modalities. Fitted with universal motor and operable on either alternating or direct current. All currents generated by generator, hence earth-free. Famous McIntosh Dial Current Selector to select currents. No complicated switches. Very powerful slow sinusoidal current capable of contracting abdominal muscles. Embraces motor, generator, sinusoidal device, rheostat, milliamperemeter, dial selector and pole changer all mounted on a beautiful white enameled, porcelainized steel slab encased in a polished golden oak cabinet with plate glass cover, including conducting cords, handles, spongio discs and attachment plug with cord.

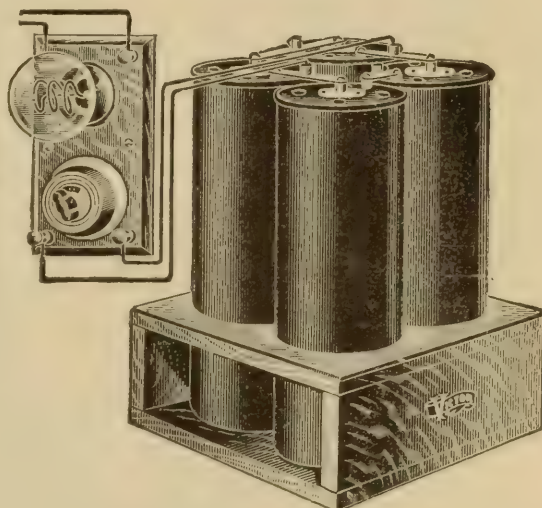

Price\$175.00

ELECTRICAL

F-233. VICTOR NO. 1 ELECTROLYTIC RECTIFIER

Service: For converting alternating to direct current for the purpose of energizing galvanic, faradic and sinusoidal apparatus and also for energizing Eye Magnets which do not require more than one ampere of current. An inexpensive substitute for a Generating Set where finances do not permit of the latter instrument.

Price, arranged for the 110 or 220 volt alternating current.....\$25.00

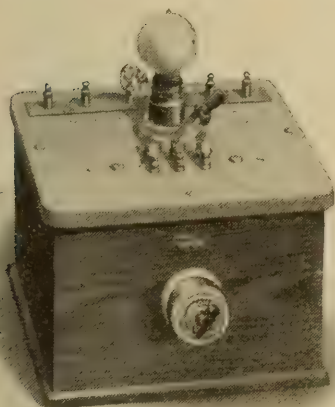

F-205. McINTOSH NO. 1 A. C. RECTIFIER WITH POTENTIAL EQUALIZER

A very satisfactory device for converting alternating to direct current for use with Wall Plate. Consists of four jars containing a chemical solution, enclosed in a neat hardwood case. The device termed the Potential Equalizer eliminates the pulsations ordinarily encountered with rectifiers.

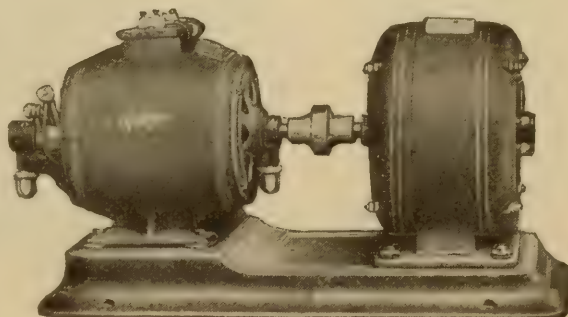

Price, McIntosh No. 1 Improved A. C. Rectifier with Potential Equalizer.....\$25.00

Price, McIntosh No. 2 A. C. Rectifier, omitting Potential Equalizer..... 15.00

F-236. VICTOR NO. 2 GENERATING SET

Service: Primarily for converting alternating to direct current for the purpose of energizing galvanic, faradic and sinusoidal apparatus and any other apparatus which does not require more than one ampere of direct current. This Generating Set may also be used for power purposes where not more than 1-6 H. P. is required. The speed of this set variable by means of shifting the brushes. A rheostat for this purpose will be supplied on request and at an extra charge.

Price, arranged for the 110-volt 60 cycle alternating current.....\$95.00

F-238. VICTOR A. C. CAUTERY TRANSFORMER

Range of Service: Cautery current for every type of electrode from the smallest to the largest; diagnostic lamp current, complete service with a great refinement of control. The two circuits are independent of one another, permitting of both cautery and diagnostic lamps to be used simultaneously.

Price, arranged for the 110 or 220-volt alternating (60 cycle) current.....\$27.50

F-235. McINTOSH NO. 1 A. C. CAUTERY CONVERTER

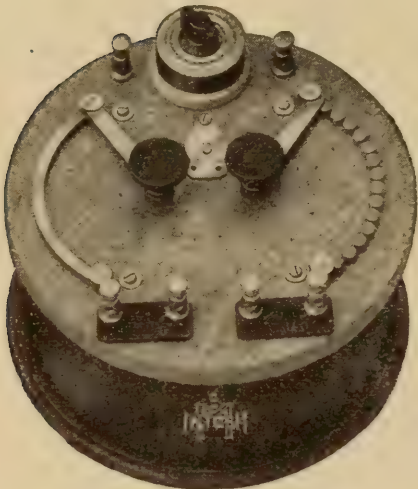

An excellent apparatus for heating cautery electrodes and illuminating any cystoscope, urethroscope, trans-illuminator or other diagnostic lamp. Gives perfect control for the lightest cautery for eye work to the heavy hemorrhoidal cautery, which requires 100 amperes. This device is intended to be operated on the alternating current.

Price, including attachment plug with cord....\$25.00

Price, No. 34 Heavy Hemorrhoidal Cautery Electrode 8.00

Price, Heavy Cautery Handle 2.50

Price, Heavy Cautery Cords 2.50

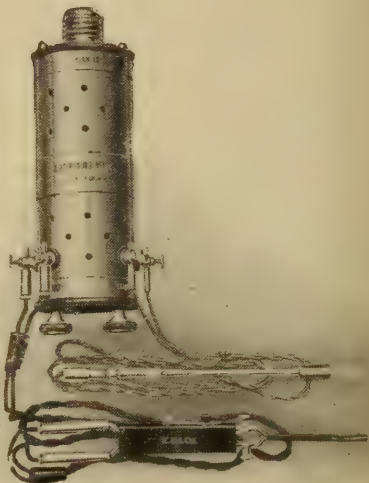

F-14. ELECTRO SURGICAL INSTRUMENT CO. SOCKET CAUTERY TRANSFORMER

Our socket cautery transformer is the only device of its kind on the market. It weighs but 2½ pounds, is 6½ inches long and 2½ inches in diameter and will screw into any ordinary lamp socket. It is for use on the alternating current of any voltage and number of cycles and will furnish current for ordinary cauteries and all kind of diagnostic lamps. Being fitted with two pairs of binding posts, each with independent wiring, cautery and lamp may be used simultaneously, if desired. The current graduation is exceedingly fine and even and the range large so that the smallest diagnostic lamps and lightest cauteries as well as 15 volt lamps and ordinary cauteries may be used with equal satisfaction. Its construction is simple and thorough, there being practically nothing to get out of order and its easy portability enables it to fill an entirely unoccupied field, all other transformers being too bulky or heavy to be readily carried about, and none screwing directly into the socket. No resistance lamp is used, so that trans-illumination is obtainable in absolute darkness. When ordering please state voltage and number of cycles of current on which transformer is to be used.

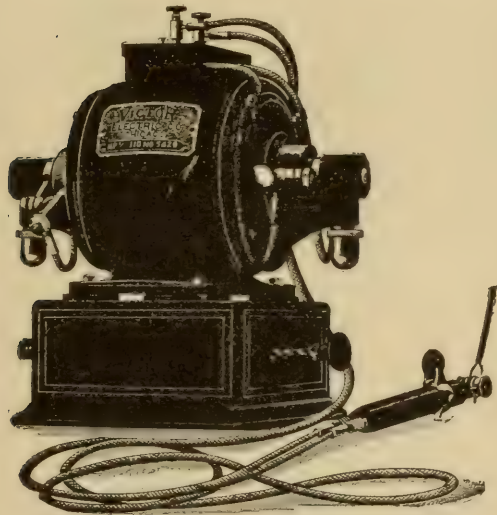

Price, with lamp cords\$20.00

Price, with lamp and cautery cords..... 22.25

ELECTRICAL

F-616. VICTOR NO. 17 PORTABLE VIBRATOR

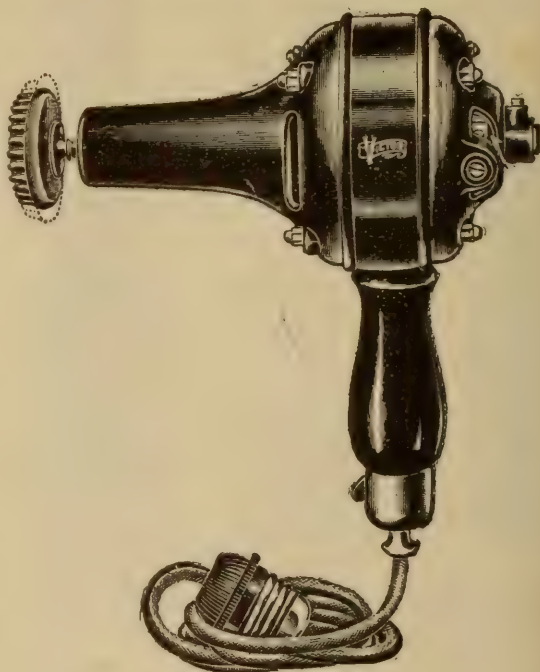

In common with all other apparatus of Victor manufacture, **quality** and **simplicity** have been given first consideration. The commutator is made of copper, and the whole motor is so perfectly constructed that it runs absolutely sparkless on either direct or alternating current. The mechanical parts are made of hardened tool steel which means unusually long life. The only parts of the vibrator subject to wear are the carbon brushes which should last at least one year and a half before renewals are necessary.

Operable on Both Direct and Alternating Current. This is a "Universal" vibrator, which means that the one vibrator can be operated from either current.

Black japan and nickel finish.

Price of above vibrator, complete with plush lined carrying case, and four applicators, arranged for operation on both 110 volt direct and alternating (60 cycle) currents.....\$26.25

Price, complete as listed above, but arranged for 220 volts direct and alternating (60 cycle) currents.... 29.25

**F-620. VICTOR NO. 1 MESSAGE APPARATUS**

Designed exclusively for professional service. Has been accepted as the standard massage apparatus by the American Electro-Therapeutic Association. Delivers both sedative and stimulative strokes. The intensity and speed are under separate and refined control.

Furnished with or without pedestal as desired.

Simple in construction and manipulation and will last a lifetime.

Price of Victor No. 1 massage apparatus, complete with motor, handpiece and six applicators, arranged for the 110-volt direct current.....\$73.00

Price, arranged for the 220 volt direct current..... 76.00

Price, arranged for the 110 volt 60 cycle alternating current 75.00

ELECTRICAL

Therapeutic Lamps

F-764. VICTOR M. I. P. THERAPEUTIC LAMP

A most useful light therapy appliance which may be used both at the office and the bedside. Has a carbon filament bulb and delivers in excess of 76 candle-power of light energy. Produces all of the rays in the visible sunlight spectrum, covering the same ground as the Victor Solar Lamp excepting in a much more limited area.

Price, complete as shown, arranged for the 110 volt direct or alternating current..\$7.00
 Price, arranged for the 220 volt direct or alternating current..... 8.00
 Price of color screens (red, amber, blue or violet), each..... 1.75

F-769. FISCHER "RADIOLIGHT" 10 IN. LAMP

The "Radiolight" consists of a strong, yet light, aluminum reflector properly spun to deliver the fine focused rays so necessary for treatments with this method. Equipped with a three hundred and seventy-five watt Stereopticon globe, developing enormous heat; but with light in direct proportion, as with sunlight. The reflector is so constructed that it is truly portable; weighing but a few ounces; yet strong enough to easily resist the wear that an outfit of this kind is constantly subjected to.

"Radiolight" with cord, plug and 375 watt globe.....\$8.00
 Red, blue or amber screens..... 2.00
 Extra globes, each..... 2.50

ELECTRICAL THERAPEUTIC LAMPS

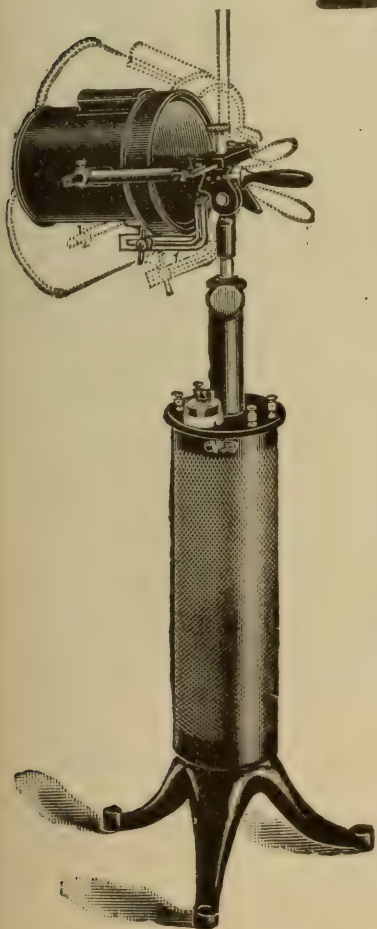

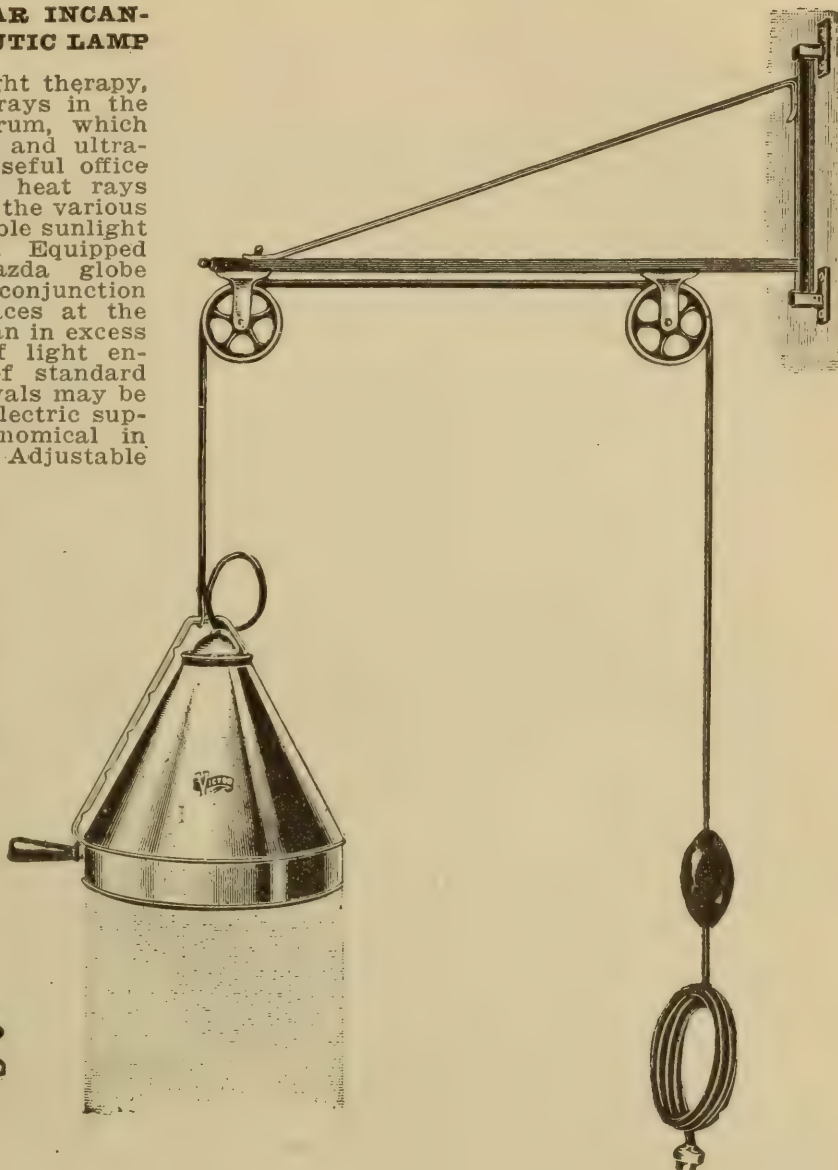

F-771. VICTOR SOLAR INCANDESCENT THERAPEUTIC LAMP

Service: Limited light therapy, embracing all of the rays in the visible sunlight spectrum, which excludes the infra-red and ultra-violet rays. A most useful office instrument where the heat rays and selective effects of the various colored rays in the visible sunlight spectrum are desirable. Equipped with a 500-watt Mazda globe which, when used in conjunction with the reflector, places at the disposal of the physician in excess of 500 candlepower of light energy. The globe is of standard manufacture and renewals may be obtained through any electric supply house. Very economical in current consumption. Adjustable to any position.

Price, complete as shown, including swinging arm, counter weighting, etc., arranged for the 110 volt direct or alternating current\$44.00

Price, complete as listed above, but arranged for the 220 volt current..\$45.00

Price of color screens, each \$6.00 extra.

**F-762. VICTOR SUN ARC LAMP**

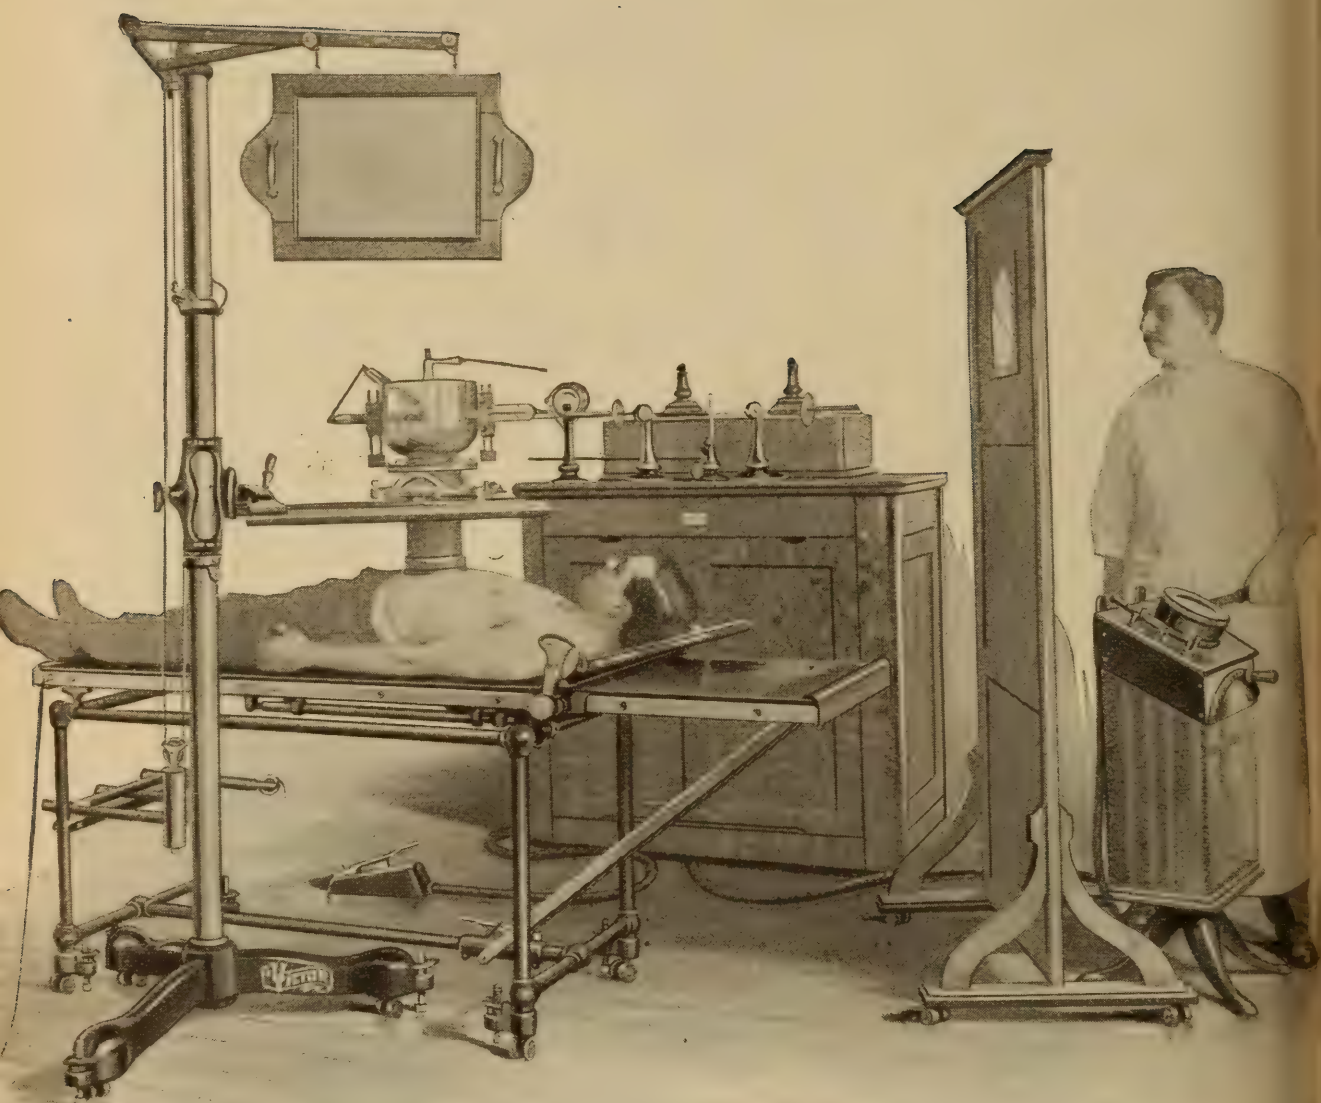

Service: Universal light therapy, producing artificial sunlight, i. e., every ray in the complete sunlight spectrum being available from this lamp, which includes the ultra-violet rays which are not obtainable from the incandescent type of therapeutic lamp.

Two color screens are provided with this lamp, a blue screen for sedative effects and a red screen for stimulative effects.

Operates on either direct or alternating current.

Price, complete as shown, including one each of red and blue screens, one dozen special carbons, one special conducting cord and fuse block, arranged for the 110 or 220 volt direct or alternating current.....\$62.00

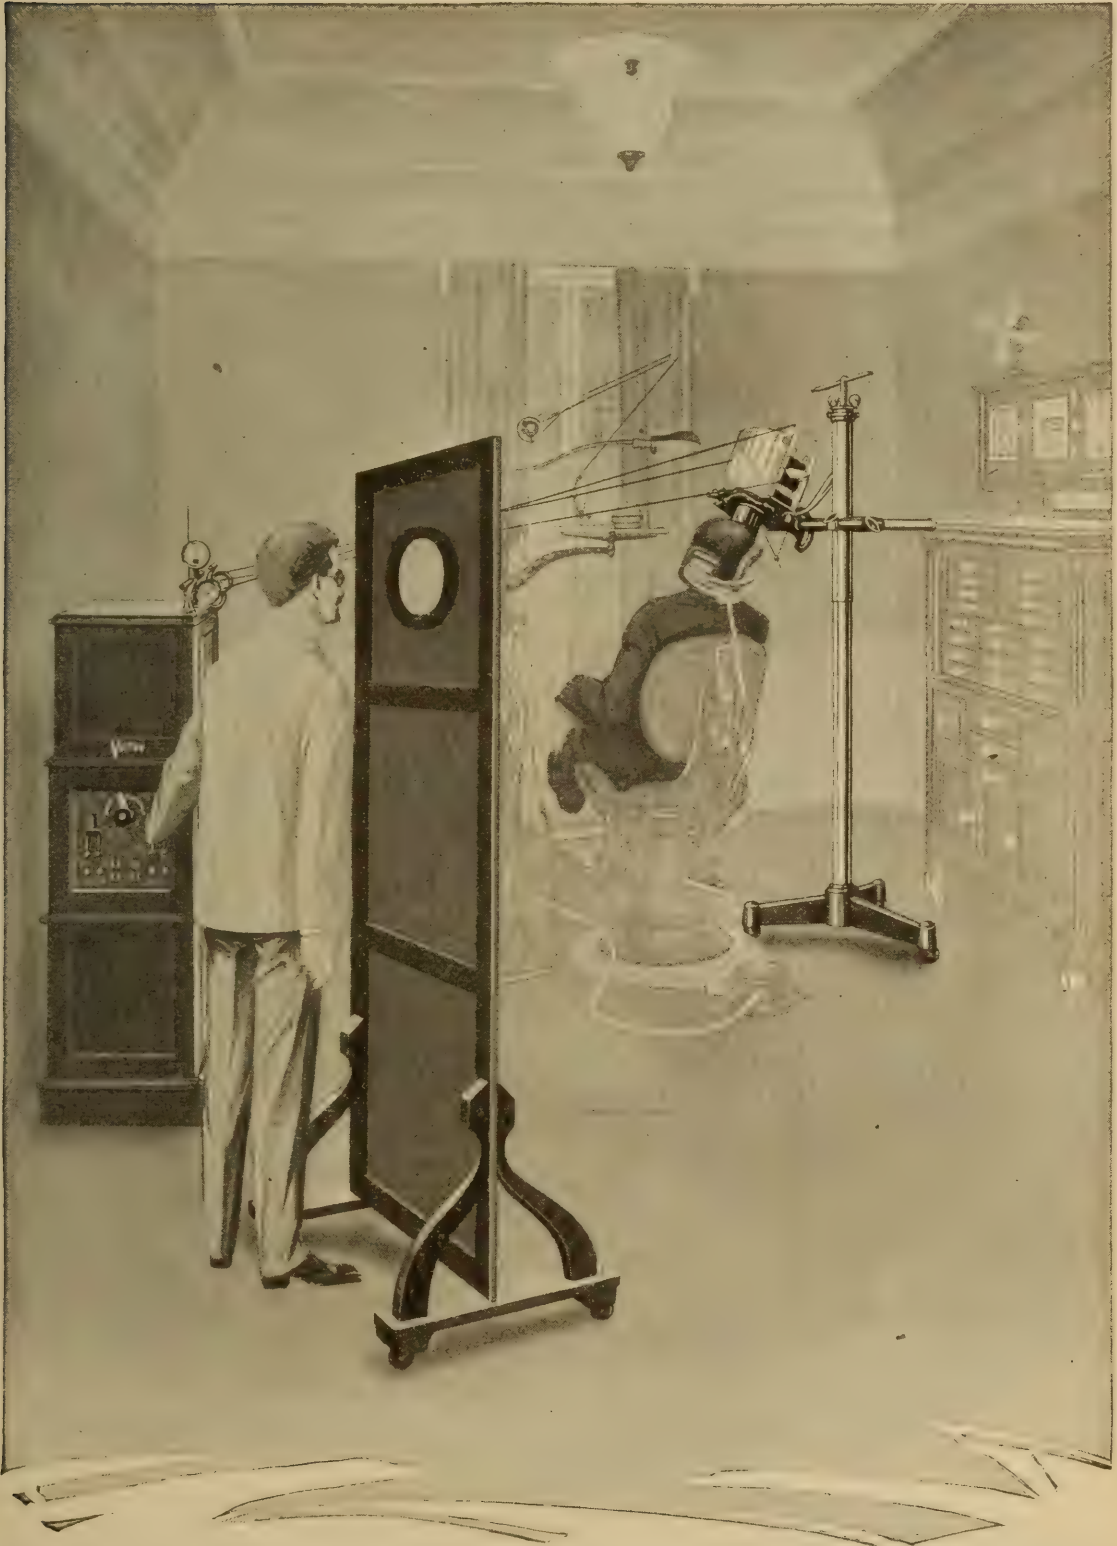

X-RAY APPARATUS

**F-1154. "WANTZ SPECIAL" INTERRUPTERLESS X-RAY TRANSFORMER**

Space in our general catalogue is too limited to go into detailed description. If interested, send for special catalogue on **Victor Transformers, Roentgen Stands, Tables and X-Ray Accessories.**

The **Victor** product is guaranteed, and the guarantee is always made good.

ELECTRICAL
VICTOR X-RAY APPARATUS
Designed Especially for Dentists

Working view of Victor Dental X-ray installation, showing the transformer, protective screen, and radiographic stand in operative position where plenty of floor space is available.

Our space is entirely too limited in a general catalogue to go into detailed description. Send for special catalogue if interested.

ELECTRICAL

X-RAY APPARATUS MANUFACTURED BY McINTOSH BATTERY & OPTICAL CO.

Interrupterless, Motorless, Commutatorless and Noiseless.

F-1224. HOGAN SILENT ROENTGEN TRANSFORMER, 5 K. W.

(Patented March 14, 1916, and Jan. 30, 1917)
(Other patents pending)

A powerful X-Ray apparatus capable of producing contrasty radiographs of any bone structure of the body and splendid diagnostic plates of gastro-intestinal conditions at extremely short exposures. Very simple of construction. Built according to a new principle with motor and commutator entirely eliminated, hence no moving parts to get out of order. Uses comparatively small amount of electricity and is easy on tubes. Highly efficient in current output, as the highest grade of kidney and stomach work can be done with 20 to 30 M. A. in tube. This means long life to tubes. Many valuable, exclusive, patented features, such as protective lead-lined door enclosing switchboard and forming protective screen to operator, taking up no room when closed. Fluoroscopic screen may be attached to outside of large lead-glass window 16x20 inches in door, affording excellent fluoroscopic results in chest, stomach and fracture cases. Extremely rapid exposures can be made, producing extremity pictures in a fraction of a second, and pictures of the deeper parts in from one to five seconds; while with an intensifying screen these exposures can be reduced proportionately. For treatment work it is now considered a standard apparatus. For screen work or deep therapy it is equally adapted; while for Coolidge tube technique it is unsurpassed. Lengthy fluoroscopic examinations can be made with great satisfaction. The deep

penetration afforded by this apparatus is attributable to the extremely high voltage of the current, as the maximum spark gap is 15 inches. When desired a most effective High Frequency Resonator can be built in the lower panel of the cabinet, affording high efficiency for Tesla; Vacuum Electrode application; d'Arsonval current for Auto-Condensation up to 1,200 or 1,500 M. A.; local application; Diathermy and Fulguration. This apparatus is offered at an extremely low price considering the high efficiency afforded.

F-1224	1 Hogan Silent Roentgen Transformer, 5 K. W., 110-220 volt alternating current, 60 cycles, complete with lead-lined protective door with lead-glass window 16x24 inches, including switchboard, rheostat, ammeter in primary circuit, high tension milliammeter and three cord reels....	\$750.00
F-1230	1 Fluoroscopic Screen, 11x14 inches, including attachments for mounting on door of cabinet.....	75.00

ELECTRICAL

X-RAY APPARATUS MANUFACTURED BY McINTOSH BATTERY & OPTICAL CO.

HOGAN SILENT ROENTGEN TRANSFORMER, 2 K. W.

(Patented Jan. 30, 1917)

**Interrupterless, Motorless, Commutatorless
and Noiseless**

For fluoroscopic examination or treatment work such as is desired in general practice, this apparatus meets every indication.

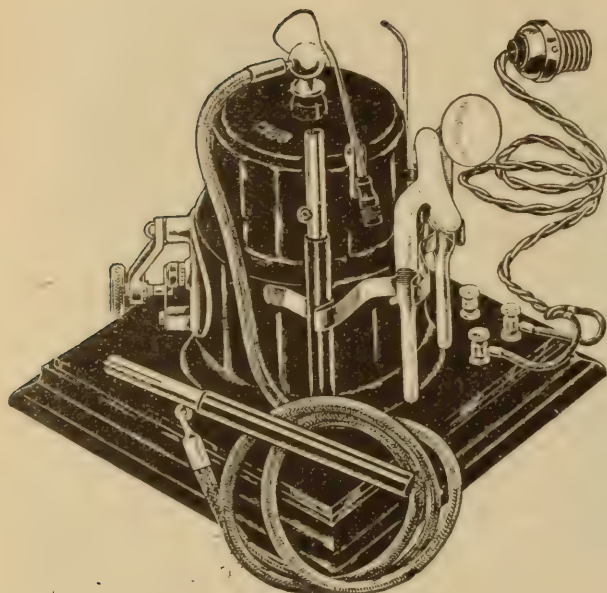

It is easy to install, consumes only 10 or 15 amperes of current, is simple to operate and requires a minimum of attention on the part of the operator. While the apparatus is absolutely noiseless with alternating current, a rotary converter is required with direct current to transform the direct current to alternating. The outfit is offered at a most moderate price considering the great power and wide range of effects afforded:

F-1260	1 Hogan Silent Roentgen Transformer, 2 K. W., for 110 volts, 60 cycles A. C., omitting Tube Holder, X-Ray Milliammeter and Hot-Wire Milliammeter, but including two cord reels, set of six Snow's vacuum electrodes with high frequency cord and non-sparking handle.....	\$400.00
F-1266	1 X-Ray Milliammeter, additional.....	25.00
F-1268	1 Hot-Wire Milliammeter for measuring d'Arsonval current for auto-condensation	25.00
F-1270	1 Adjustable Tube Holder with lead-glass bowl and spring support attached to side of cabinet.....	35.00
F-1272	1 6-inch X-Ray Tube with platinum faced target.....	20.00
F-1274	1 Auto-Condensation Pad with glass di-electric, mounted in polished oak frame	20.00
F-1276	1 8x10-inch Fluoroscopic Screen with adjustable bracket attached to tube stand	25.00
F-1278	No. 1 Photographic Outfit.....	10.50
F-1279	X-Ray Image Box suitable for examination of 8x10-inch plates.....	6.50
Price, complete A. C. outfit for X-Ray and High Frequency Work...		\$567.00
F-1262	1 Hogan Silent Roentgen Transformer, 2 K. W., for 110 volts D. C., omitting Tube Holder, X-Ray Milliammeter and Hot-Wire Milliammeter, but including two cord reels, set of six Snow's vacuum electrodes with high frequency cord, non-sparking handle, rotary converter and starting rheostat	\$525.00
F-1264	Price, complete D. C. outfit for X-Ray and High Frequency work, including all accessories enumerated above.....	692.00

Herewith is presented the general practitioner's ideal outfit suitable for radiographic diagnosis of any bone structure of the body. Pictures of the extremities can be made in from one to five seconds, while pictures of the hip can be produced in from ten to fifteen seconds. This machine is constructed on the same principle as the larger model Hogan Transformer and has no rectifier, commutator or other moving parts, hence it is good for practically a life time of service without attention. A High Frequency Resonator is built into the cabinet but is not a part of the Transformer, as the high frequency current is not used for X-Ray work. This Resonator affords ideal Tesla current for vacuum electrodes, d'Arsonval current for auto-condensation (up to 1,200 M. A.) or local application, diathermy and fulguration and is automatically connected or disconnected with the Transformer by means of a switch operated by a knob on the switchboard, similar to the well-known McIntosh Dial Current Selector.

ELECTRICAL

HIGH FREQUENCY APPARATUS

**F-786. VICTOR GEM HIGH FREQUENCY COIL**

Range of Service: Vacuum electrode treatment, static spark and superficial fulguration.

Built on the Tesla principle of transformation.

Dimensions: 10 in. wide, 10 in. deep, 10 in. high; weight, approximately 5 lbs.; finish, hard rubber in black enamel.

Price, complete as shown, including attachment plug and cord for vacuum electrodes, electrode handle, electrode cord and protective carrying case, arranged for the 110 volt direct or alternating current \$30.00

Price, complete as listed above, arranged for the 220 volt direct or alternating current.. 33.75

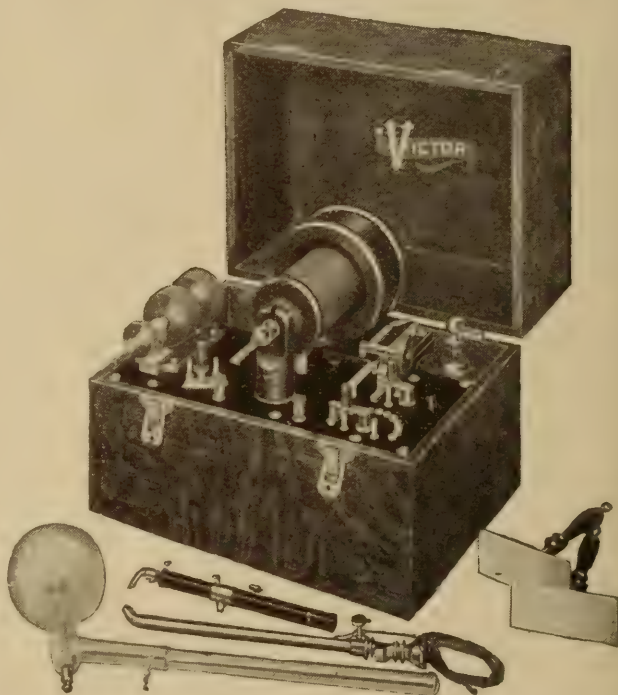

F-787. VICTOR NO. 10 HIGH FREQUENCY COIL

Range of Service: Fulguration for all branches of this work, including orificial fulguration (papilloma of the bladder, etc.); superficial fulguration (destruction of warts, moles, etc.); diathermy for deep seated eating effects, the current range being from zero to an excess of 2,000 milliamperes; vacuum electrodes (complete service); ozone inhalation and static spark.

This apparatus is constructed on the d'Arsonval principle of transformation and delivers both d'Arsonval and Oudin currents.

Two interchangeable inductors are an integral part of the apparatus and virtually double the service of the apparatus.

Dimensions: 14½ in. wide; 11 in. deep, 12½ in. high; weight (net), 44 lbs. Finished in golden oak.

Price of above apparatus exclusive of all accessories excepting attachment plug and cord and electrode cords, arranged for the 110 volt 60 cycle alternating current \$ 80.00

Price, complete as listed above, but arranged for the 110 volt direct current..... 130.50

Price of fulguration wire (for introduction through cystoscope), per foot..... .20

ELECTRICAL

C-776. VICTOR NO. 7 HIGH FREQUENCY COIL
(Tesla Type)

The following currents and modalities are obtainable from this apparatus:

AUTO-CONDENSATION of comparatively high potential and low milliamperage.

D'ARSONVAL (Diathermy). This current differing in character from the same current obtainable from the Victor No. 8 High Frequency outfit in that the potential is much higher and the current decreased in proportion, the physiological effects being practically the same.

FULGURATION. This modality being ideal for the removal of all superficial superfluous growths, such as warts, moles, etc., etc.

HIGH FREQUENCY SPRAY OR EFFLEUVE.

VACUUM ELECTRODE.

OZONE INHALATION. By means of a small generating and filtering attachment.

ULTRA-VIOLET LAMP.

X-RAY. This outfit will be found of sufficient power for radiography of the extremities and all therapeutic work, with the exception of deep tissue therapy.

CONTROL. Every current obtainable from this apparatus is under absolute control of the operator—both as regards the quantity and the frequency.

PRICES

Arranged for 60-cycle alternating current, complete with six vacuum electrodes, one adjustable holder for same, one No. 530 electrode, one No. 531 electrode, one pair of automatic spring cord reels and one attachment plug and cord..\$200.00
Arranged for 110-volt direct current..... 310.00
Arranged for 220-volt direct current..... 313.00
(Meter not included in above prices.)

F-777. VICTOR NO. 8 HIGH FREQUENCY COIL
(d'Arsonval Type)

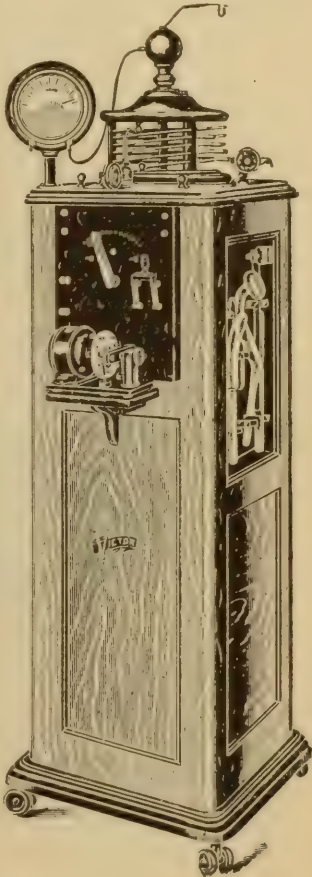

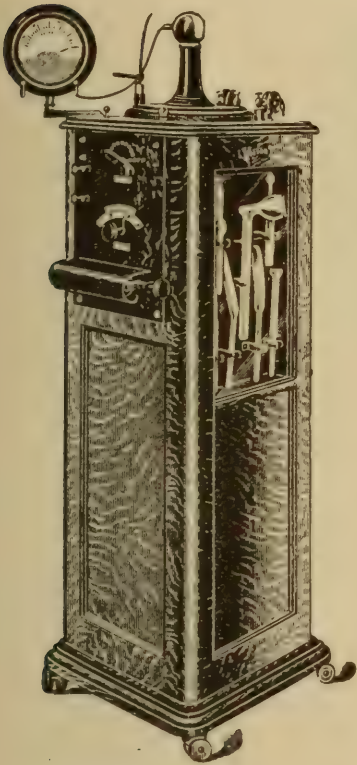

Victor No. 8 High Frequency apparatus. Constructed on the d'Arsonval plan of transformation, giving potential low voltage, and high amperage current.

The range covered by this apparatus is as follows: Auto-Condensation, Diathermy, Fulguration (for orificial and superficial fulguration); Spray (or Effleuve), Static Spark and Ozone Inhalation.

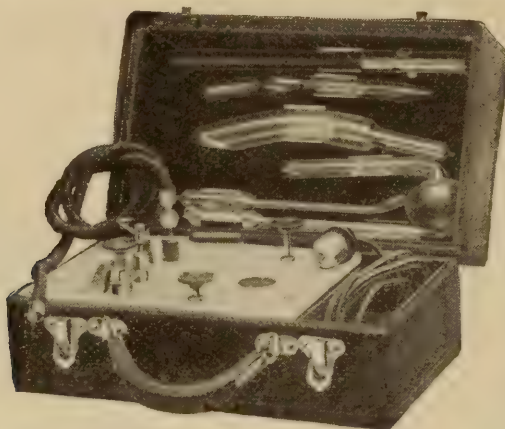

This apparatus is equipped with a Victor Rotary Spark Gap, which can be run for an indefinite length of time without the necessity of having the operator make any subsequent adjustments.

This apparatus is arranged for operation on alternating current and where the direct current, only, is available, we are prepared to supply a Rotary Converter.

Price, arranged for the 110-volt, alternating current less meter.....\$200.00
Price, arranged for 110-volt, direct current, complete with rotary converter and rheostat..... 310.00

ELECTRICAL HIGH FREQUENCY APPARATUS

F-1050. FISCHER TYPE "F" HIGH FREQUENCY AND VIOLET RAY GENERATOR**Type "F"**

A light weight, portable outfit, delivering HIGH Frequency currents for Fulguration and internal applications, and a heavier LOWER Frequency discharge for Surface Massage.

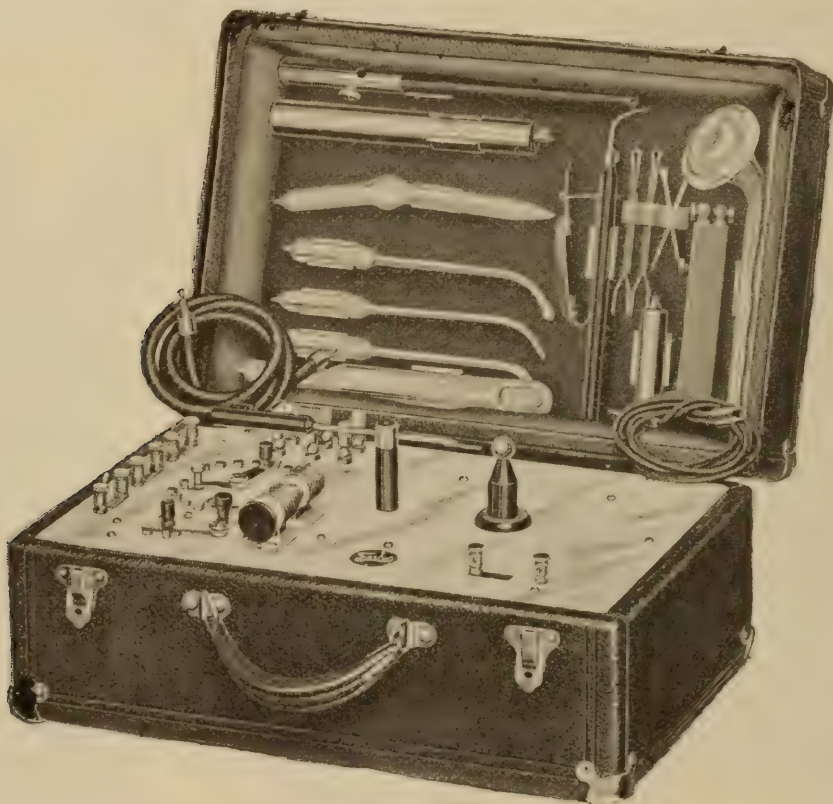

Also arranged with Cautery and Diagnostic Lamp attachments.

A Compact, Durable Outfit, fully guaranteed.

Type "F" is mounted in a black leather covered box with White Italian Marble top, with six feet green silk connecting cord and plug, ready to attach to any electric light socket of 110 volts 60 cycles A. C. or 110 volts D. C. Furnished for other currents at no extra cost.

Type "F" Regular, including High Frequency Handle, Heavy Protected Cord, and one each Surface, Rectal, Vaginal, Nasal, Throat and Urethral Electrodes....\$30.00

Type "F" Cautery, including all of the above, with addition of Cautery and Diagnostic Circuits, Cautery Handle, Pair Cautery Cords, Two Knives, and one Diagnostic Illuminator with Cords, Holder and Tungsten Lamp.....\$38.00

F-1052. FISCHER PORTABLE "K" COMBINATION**Type "K"**

This Generator is similar in general appearance to type "F," but is built on the closed core transformer principle; therefore has considerable more output. Type "K" is a Practical, Durable Outfit, with excellent control of all features, and very powerful.

Delivers High Frequency, Fulguration, Ozone (with our No. 22 attachment), D'Arsonval, Cautery, Diagnostic and Sinusoidal Currents.

Furnished as illustrated, with the addition of an Auto-Condensation Chair Pad, arranged for 110 volts 60 cycle alternating current.....\$75.00

ELECTRICAL

F-1054. FISCHER PORTABLE TYPE "E" COMBINATION

A Practical and Compact Electro-Therapeutic Outfit for the General Practitioner

There are a great many circumstances under which the ordinary practitioner does not need a large and heavy cabinet for his electro-therapeutic work, and there are other occasions when a portable outfit is urgently required.

Here is a practical, simple, yet powerful outfit, especially designed to meet the needs and requirements of the physician who appreciates the value of the various modalities and recognizes that it is essential to have them available, but who does not wish to install one of the heavier cabinets; or wants a portable to supplement his office equipment.

Type "E" will be found to meet all requirements for such practice, and we can unconditionally recommend it to the profession as a high class, dependable and economical piece of electrical equipment.

Portable "E" delivers X-Ray of medium power, suitable for all fracture work, High Frequency, Fulguration, D'Arsonval, Cautery, Diagnostic and Sinusoidal currents. Furnished as illustrated, with the addition of a 6-inch Heavy Anode X-Ray Tube, 5x7 Mounted Fluoroscope, Universal Portable Tube Support, for 110 volt, 60 cycle alternating current.....\$160.00

F-1056. FISCHER TYPE "H" X-RAY AND HIGH FREQUENCY CABINET

Here is an excellent apparatus for all around X-Ray work, which is exceedingly simple to operate. Has no Rectifiers; no Interrupters; no Valve Tubes; no Inverse Currents. Just a clean, penetrating, positive X-Ray.

Type "H" will produce high class radiographs of any part of the bony structure; from exposures of one second for a hand, to twenty to twenty-five seconds for hip and spine.

The most striking feature of all Fischer "H" types is the entire absence of complicated mechanism. There is not a moving part in its entire construction; hence nothing to wear out. This simplicity of design, as illustrated, relieves the operator of the burden of thought required in the operation of machines employing a number of buttons and switches.

Another excellent feature on all "H" Generators is the splendid High Frequency current available. These currents are coming into more frequent use by Physicians and Dentists alike, and we pride ourselves on the extreme HIGH frequency, so necessary where real results are to be obtained, which the "H" outfits deliver.

They are sold on a positive guarantee against all inherent defects covering a period of two years. Every detail of construction is carefully supervised, and an outfit capable of giving enduring satisfaction is the result.

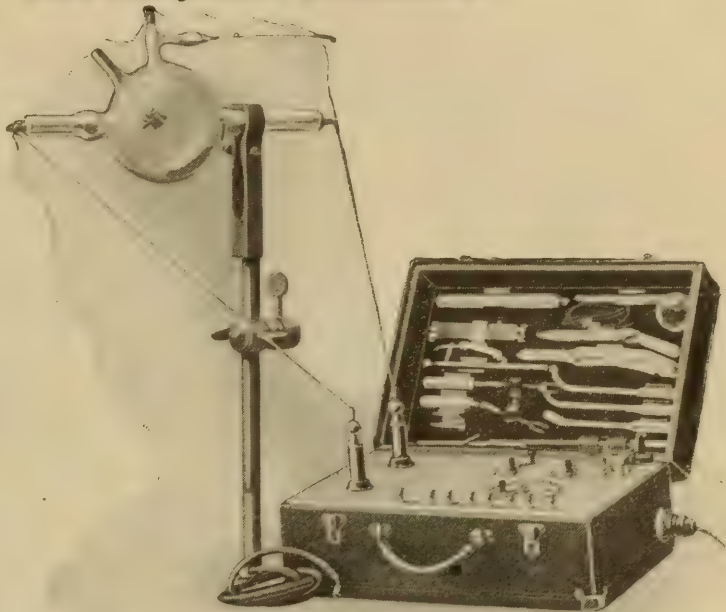

Cabinet is provided with a Lead-lined Compartment large enough to accommodate a supply of all sizes of X-Ray Plates and Films.

Type "H," with Connecting Cord, High Frequency Handle, H. F. Cord, and one each Surface, Rectal, Vaginal, Nasal, Throat and Urethral Electrodes, with instruction booklet.....\$185.00

Type "H-2," same as above with addition of 6-inch heavy Anode X-Ray Tube, Wooden Floor Tube Support, 5x7 Mounted Fluoroscope, Cautery Handle, Pair Cautery Cords, 3 assorted Cautery Knives, Diagnostic Illuminator with cords, holder and Tungsten Lamp, pair Sinusoidal Cords and Handles, and special Fulguration Electrode with 3 tips..... 235.00

Type "H-3," same as "H-2," but less the Cautery, Diagnostic and Sinusoidal Circuits and Accessories, with the addition of our Protection and Compression Tube Stand in place of the wood type, Pair Rewind Cord Reels, and Dark Room Equipment, consisting of, 1 Electric Ruby Lamp, 2 8x10 Steel Enamelled Trays, 3 packages Developing Powders, 1 package Hypo Fixer, and 1 dozen 8x10 Paragon X-Ray Plates..... 275.00

Type "H-4," same as "H-2" with addition of all extra accessories as listed with "H-3," including Cautery, Diagnostic and Sinusoidal..... 292.50

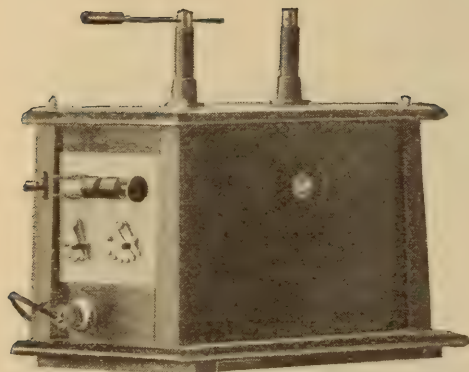

Portable "E"

Cabinet "H"

ELECTRICAL

High Frequency Apparatus

Low Type "H"

F-1058. "FISCHER" LOW FORM, TYPE "H"

This machine has practically the same Electrical features as the Cabinet types, but is mounted in a shorter container which can be set on a table or stand, or on brackets on the wall where floor space is at a premium.

Low "H" semi-portable, with connecting cord and plugs, 6-inch heavy anode X-Ray tube, pair of Fischer Cord Reels, set of 6 High Frequency Electrodes, cord and handle, and wooden floor tube stand with metal base.....\$185.00

Type "H-1," same as above, with addition of Protection and Compression Stand, 5x7 Fluoroscope, Ruby Lamp, 2 8x10 trays, 3 pkgs. Paragon Developer, 1 pkg. Hypo, and 1 doz. 8x10 Plates and Envelopes\$255.00

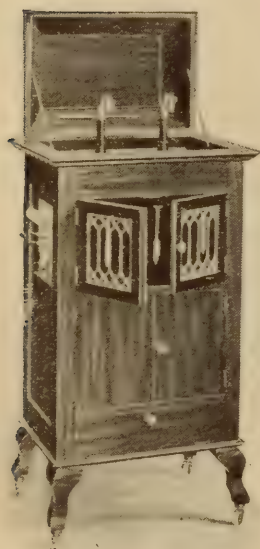

FISCHER SUIT CASE PORTABLE, TYPE "M"

While this outfit is somewhat heavier than the majority of so-called X-Ray Portable on the market its performance when results are desired is little short of marvelous. To see it in action is really the only satisfactory way of being convinced that it will do any class of Bone Radiography, and do it right.

Equipped with Cautery and Diagnostic Circuits and Accessories, including Cautery Handle, Cords and two Knives, Diagnostic Illuminator with Cords, Holder and Tungsten Lamp, also portable tube support, 6-inch Heavy Anode X-Ray Tube and set High Frequency Electrodes, cord and handle.....\$200.00

Fischer Portable Outfit "M-2," same as above, with all additional accessories

with "H-1" 270.00

Type H-5

F-1060. TYPE "H-5" DENTAL COMBINATION

This outfit was designed to fill a long felt want among the Dental profession, for a neat appearing, compact, yet simple and efficient X-Ray Machine, with High Frequency Attachment.

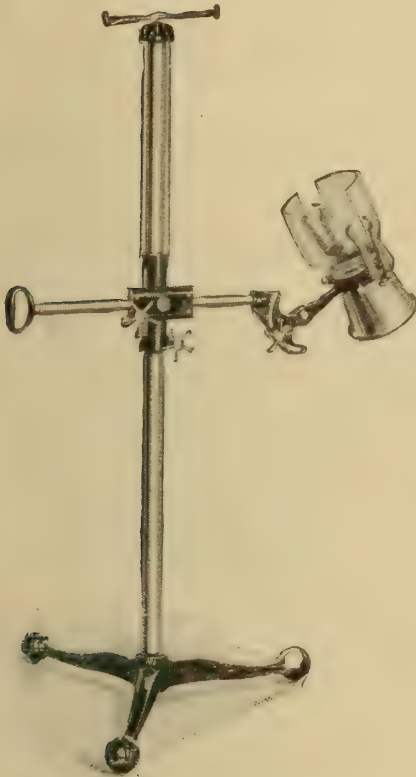

Of the same power as the other "H" models, it is furnished with a complete equipment, such as a Dentist is called on to use.

Furnished in a Solid Mahogany, Golden Oak, Pearl Grey or White Enamel Cabinet, with Tube Stand to match, it is an exceedingly handsome piece of office equipment. Complete in all details.....\$375.00

ELECTRICAL

X-Ray Tube Stands

F-1062. THE "FISCHER" PROTECTION AND COMPRESSION TUBE STAND

Fischer Tube Stand

The Stand illustrated represents the result of our aim to provide an article for all around X-Ray work. In protection it is as perfect as stands selling at greatly higher prices; has graceful lines; is perfectly balanced; has swivel head; over 90 degree swing on cross arm; large clamps, conveniently arranged; cross arm mounted on roller bearings; has 30-inch wire spreader; finished in Nickel and Black Enamel.

Price\$55.00

Mahogany, Pearl Grey or White Enamel

extra 5.00

(This is the stand furnished with all "Fischer" equipment.)

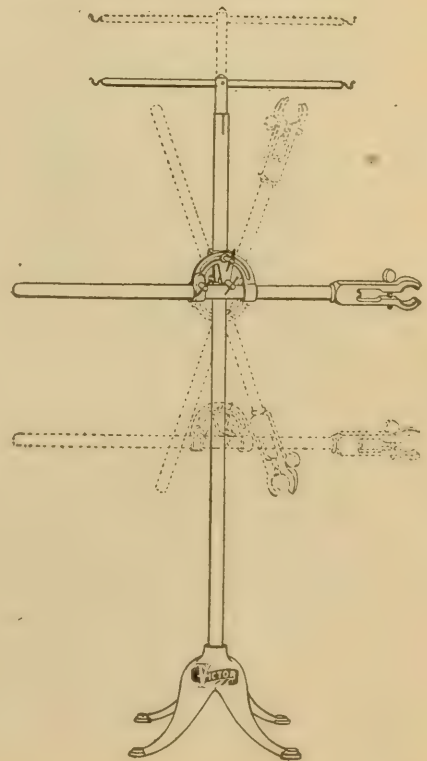

F-1064. "VICTOR" NO. 1 TUBE STAND

In this tube stand we have endeavored to embody the things most desirable in this very important part of the X-Ray operator's equipment.

Few tube stands now on the market are calculated to sustain the combined weight of a tube and an X-Ray protection shield; the Victor No. 1 will safely sustain and counterbalance the weight of the largest tube and tube shield made.

An adjustable spreader and conducting cord carrier is slidably attached to the top of the stand; this spreader can be raised to a height, if desired, where the conducting wires leading to the tube will be held more than seven feet from the floor, thus obviating any chance of sparks passing from the wires to the patient; the operator is also protected in a great measure from accidental contact with the conducting cords or wires.

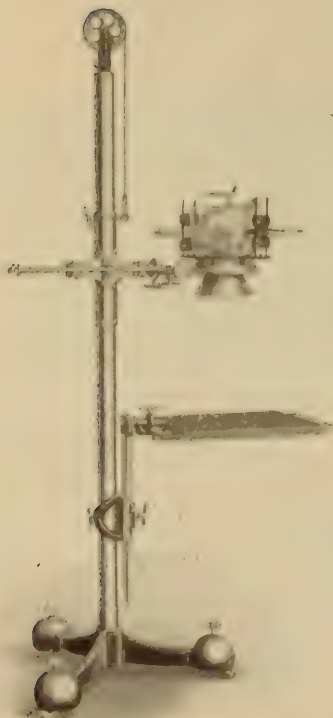

The mechanical device giving universal adjustment to the tube position permits of the very closest adjustment of height, distance from standard, and angle, works with perfect smoothness, and will appeal especially because of its easy and convenient manipulation.

Price, complete as shown.....\$14.50

ELECTRICAL

X-Ray Apparatus Manufactured by McIntosh Battery & Optical Co.

**F-1066. MCINTOSH NO. 2 STEREOSCOPIC
TUBE STAND****McIntosh No. 2 Stereoscopic
Tube Stand**

The most complete and convenient stand ever designed for Roentgenology, embracing every conceivable adjustment, and the biggest value ever offered. Other manufacturers sell a Tube Stand of similar quality and adaptability for at least \$25.00 higher than this one. The tube carriage is fitted with a most practical automatic stereoscopic attachment with adjustment for the angle of tilt. The tube may be tilted at a convenient angle for treatment work. The auxiliary plate table is a great convenience for simple extremity work. The cassette or envelope can be inserted in the tunnel underneath plate table so that there is no danger of cracking a plate in making a very awkward picture such as knee or foot. The base of plate table is of oak, offering practically no resistance to the ray. Another advantage is that the plate table is not attached to the axis of tube as with other stands, hence it may be adjusted independently of tube if desired. The auxiliary table is very convenient for vertical gastro-intestinal work. The plate table is detachable and can be fitted to any tube stand having a standard not exceeding $2\frac{1}{2}$ inches in diameter. It is interchangeable with either the No. 1 or No. 2 Stands. The tube carriage is accurately counterbalanced and responds instantly to the slightest adjustment. The total height of the stands is 79 inches, width 55 inches and the floor space occupied is 30x30 inches. The total weight is 225 pounds and the shipping weight is 350 pounds.

Price, No. 2 Stereoscopic Tube Stand, including one lead cone 8 inches in diameter and auxiliary plate table.....\$175.00

Price, additional lead cones with opening $\frac{1}{2}$, 2, 4 and 6 inches, each..... 7.50

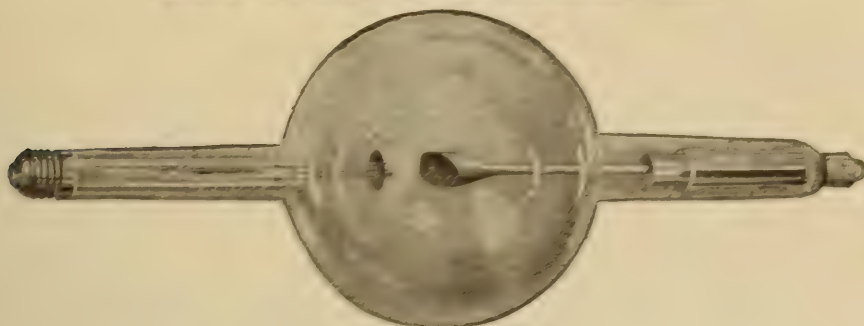

Price, auxiliary plate table furnished separately, for use with any other make of tube stand..... 25.00

F-1068. MCINTOSH NO. 1 STEREOSCOPIC TUBE STAND

A simple but substantial and attractively finished counterweighted tube stand with lead-glass bowl, fitted with stereoscopic adjustment. This stand is strongly built of the highest grade of materials and all adjustments are firmly and yet easily made. The bowl is of heavy lead glass, assuring safety from all indirect rays. The standard of the No. 1 Stand is $2\frac{1}{2}$ inches in diameter, hence the auxiliary plate table as used with the No. 2 Stand can be attached if so desired. All accessories and extra fittings for these stands are designed interchangeably so that they may be used with either stand. The tube may be adjusted at any desired angle for radiographic, fluoroscopic or treatment work, having a movement of $48\frac{1}{2}$ inches vertically and 17 inches horizontally, with lateral adjustment, adaptable to any requirements. The stand is 79 inches high and $34\frac{1}{2}$ inches at greatest width. The tripod is heavily weighted and occupies a floor space 30x30x30 inches. The bowl will hold any tube up to and including 8 inches in diameter. The total weight is 175 lbs. and the shipping weight 270 lbs.

Price, No. 1 Stereoscopic Tube Stand, including one lead cone 8 in. in diameter...\$60.00

F-1018. WANTZ AUTOMATIC X-RAY TELEFLASHER
An X-Ray Timer of the Serial and Repeating Type

It is now generally conceded that the use of an X-ray timer is just as important to the Roentgenologist as a photographic shutter is to the photographer.

The teleflasher is especially designed for instantaneous stereoscopy, straight Roentgenography, serial Roentgenography, and Roentgenoscopy (without the use of a foot switch.)

"Simply press the button—the Teleflasher automatically does the rest."

As the name implies, the Teleflasher is so designed that the Roentgenologist may do his work at any desired distance from the tube and generator.

So perfect and flexible in design is this instrument that we challenge any Roentgenologist to submit any exposure technique which cannot be automatically worked out in a practical and easy manner.

RANGE. The Wantz Teleflasher will efficiently handle the output of the most powerful X-ray apparatus made, from minimum to maximum. It is so designed that the tube may be flashed or energized for any fraction of a second, either a single flash or a series of flashes with automatically timed intervals between flashes or exposure periods.

	Complete descriptive catalogue of X-Ray Accessories mailed on request.	

F-1022. PARAGON X-RAY PLATES

So well known to most of our trade as to need little introduction; they have held **FIRST RANK** among X-ray plates ever since they were placed on the market.

We recommend them to all X-Ray users for their **HIGH QUALITY**, giving rich, intense backgrounds, with fine sharp bone detail, and showing the slightest variation in tissue density. This enables the radiographer to make plates from which a positive diagnosis can be given.

Extremely rapid, allowing abdominal radiographs to be made without using an intensifying screen, if desired. Can also be used **with screen**, the combination of an extremely fast plate, with the screen effect, giving the fastest radiographic speed ever known.

This is the only X-Ray plate adapted for use with Coolidge or Hydrogen tubes at the short spark gaps where these tubes are most efficient and valuable.

They are extremely sensitive to soft or medium rays, therefore are especially adapted for gall-bladder, kidney, or lung tissue detail, or for brain lesions. This quality is also of great value in cases of suspected bone fractures.

Carried in stock in the regular sizes shown below. Special sizes to order with slight delay.

The manufacturers publish monthly technical bulletins for gratis distribution, and will furnish expert assistance or advice on request.

Results considered, Paragon X-Ray Plates are the most economical we can furnish you at **any price**. **They save you time and money** and prevent mistakes from incorrect interpretation.

Two sets of X-Ray envelopes sent free with each dozen plates.

Extra sets at prices shown on page 559.

Price List of Paragon X-Ray Plates

Size	With 2 env.	With 12 env.	Doz. per case	Wt. per case
5 x 7	\$ 1.40	\$ 1.65	20	55 lbs.
5 x 8	1.55	1.88	20	55 lbs.

11 x14	7.25	8.25	4	72 lbs.
14 x17	11.25	13.00	3	81 lbs.

F-1024. PARAGON UNIVERSAL X-RAY PLATES

This plate is sold at a lower price and is intended for those who do much serial abdominal radiography using screens, where expense would be heavy, also for institutions doing much charity work, state compensation cases, or wherever economy in first cost is important.

They are of **HIGH GRADE**, and are **suitable for use in envelopes** or with a screen, as preferred. **Screens are not required except to save tubes**. They can be used with absolute confidence in the results obtained.

Suitable for all classes of work where a medium price plate is satisfactory.

Number of dozen and weight per case is the same as the regular plate.

Price List of Paragon Universal X-Ray Plates

Size	Per Doz.	Doz. per case	Wt. per case
5 x 7	\$1.10	20	57 lbs.
6½ x 8½	1.65	12	55 lbs.
8 x10	2.40	10	65 lbs.

11 x14	6.00	4	72 lbs.
14 x17	9.00	3	81 lbs.

F-1026. PARAGON X-RAY PAPER

This is adapted for charity work on simple cases, for checking the position of fractures after setting, location of foreign bodies such as bullets, etc. Can also be used for taking radiographs of the stomach or colon for diagnosis or for filing.

Valuable in cases requiring immediate operation, as it can be placed in operating room as a guide while still wet, whereas the heat of the lamps of the illuminating box would melt the gelatin on a wet plate or film.

When used with a good screen this paper is twice as fast as a plate used without screen. Can also be used for making reductions in a camera.

F-1032. PARAGON DENTAL X-RAY FILMS

Many serious diseases, such as rheumatism, arthritis, heart lesions, stomach ulcer, etc., can be traced to infection from pus cavities at the root of filled or apparently sound teeth.

Great advances in the treatment of these conditions have been made with the aid of the X-Ray. All progressive dentists Radiograph each root filling.

These films come wrapped ready for use in waterproof paper or rubber tissue. There are two films in each package, one for the dentist and one for office records.

They are made in two types, fast and slow, and in round cornered oblong and in oval shapes. They are held in the mouth by the patient during exposure.

In ordering be sure to state size wanted and whether fast or slow.

Free pamphlet on Dental Radiography on request.

"WHITE LINE" EXAMINING TABLES

The Paragon Table With Drawers

THE "PARAGON" TABLE

A practical, low priced, well made table for office examinations and treatments, giving all necessary positions.

The mechanism is simple and effective and positions are secured easily and quickly. The construction is of metal throughout. The tubular frame is strong and rigid and mounted on sliding furniture shoes. The top is covered with sheet steel.

The shelf below will be found a great convenience for the reception of basins, trays, etc., during diagnostic and treatment work.

The gynaecic stirrups are of steel, polished and nickel plated.

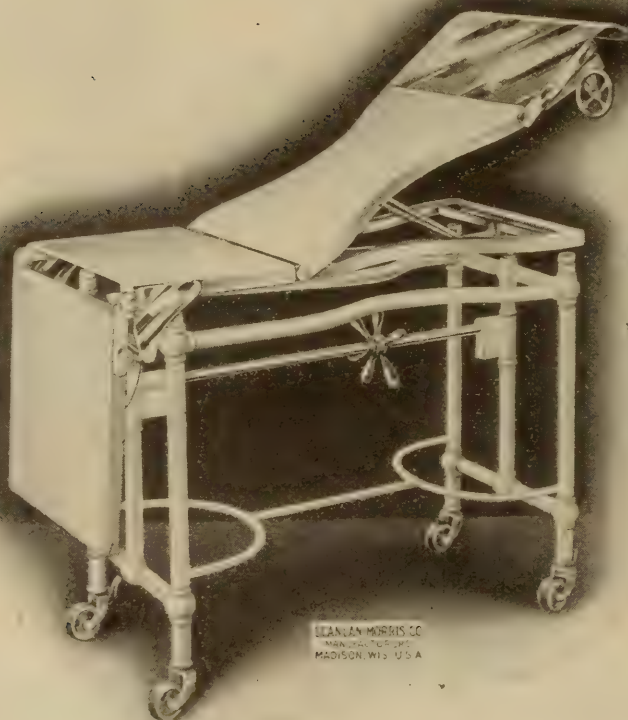

The finish is in the highest grade of enamel, hand rubbed and baked.

The table is also made with two drawers, as shown in upper illustration. They will be found especially convenient for the reception of gauze, cotton, bandages, etc.

Imitation, waterproof, leatherette cushions, as shown, can be furnished at an additional cost.

OFFICE EQUIPMENT

"WHITE LINE" SPECIALIST'S TABLE

THE "DWIGHT" TABLE
(Eye, Ear, Nose and Throat)

Designed for operative work of the Ear, Eye, Nose and Throat specialist. It is simple, convenient, easily manipulated and will meet the requirements of the most exacting surgeons in the special branches mentioned.

The table top is cut in on both sides, as shown, to permit the surgeon to take a position almost directly in front of the operative field.

The top can be raised, by means of worm gears, to any desired height, the lowest elevation is 33 inches; the highest, 43 inches. This elevation can be secured by means of the spoked wheel, situated under the table top.

The head rest is shaped to throw the head at almost a right angle, when required, and is adjustable upward to an angle of 45 degrees by means of a screw mechanism, operated by hand wheel at the side of the table. The mechanism is self locking at any point.

The back and foot pieces are adjustable by rack mechanism as shown.

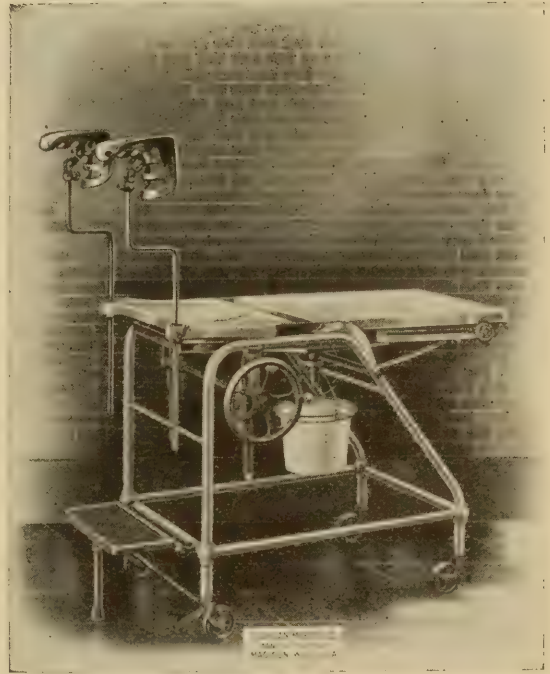

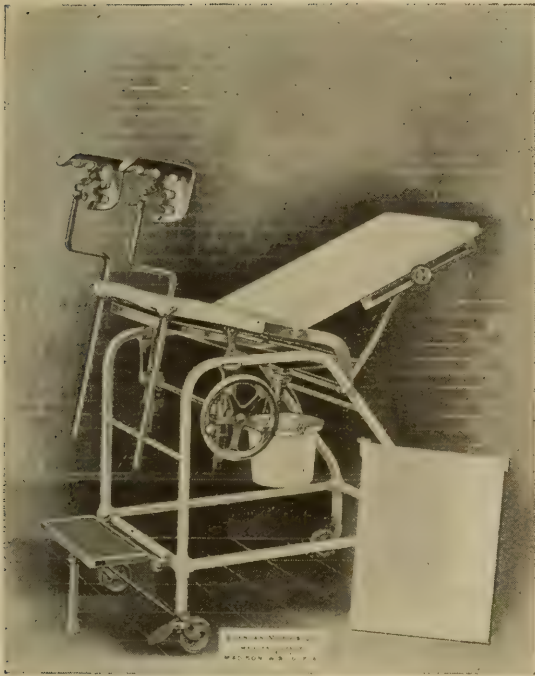

Frame is of heavy tubular construction, mounted on heavy 3 inch rubber casters. Top is of sheet steel. Head piece of brass, polished and nickel plated.

Table finished in white enamel, hand rubbed and baked.

"WHITE LINE" SPECIALIST'S TABLES

G-15. "Braasch" Mayo Clinic, Genito-Urinary Table

A table designed especially for the discriminating specialist in genito-urinary and cystoscopic work by Dr. W. F. Braasch of St. Mary's Hospital, Rochester, Minn.

The depressed seat of Porcelain Enameled iron fits the buttocks comfortably and prevents the patient from sliding forward. A raised rim on the outer edge of seat, with a central longitudinal opening, takes care of all drainage perfectly.

The back is of Porcelain Enameled Sheet Steel and is controlled with sliding lock and hand wheel.

The seat is elevated by means of large hand wheel and worm gear.

The drain pan works in slides below the seat, and is made of Benedict Nickel, a non-corrosive metal.

The footstool, attached to the frame of the table, is hinged, and folds back against the frame when not in use.

Frame is of tubular construction, mounted on 3 inch heavy rubber casters, two of which are equipped with brakes.

The table is complete with Braasch-Bierhoff Knee Crutches.

The frame is finished in white enamel, the fittings steel and brass, polished and nickel plated.

Price\$150.00

"WHITE LINE" SPECIALIST'S CABINET**"MULTUM IN PARVO" SPECIALIST'S CABINET**

The "Multum in Parvo" Cabinet is a most beautiful and practical design of a combined treatment and instrument cabinet.

The body of the Cabinet is made of polished pressed steel, reinforced to secure the greatest rigidity and strength. It has ten frictionless drawers of improved construction, arranged on each side of the instrument cabinet. The lower drawer on the right is furnished with a nickel plated container for cotton and a receptacle for waste pledgets.

The Instrument Cabinet has two polished plate glass shelves, close fitting double doors with bevelled plate glass windows, fitted with Pasquil lock and key. Dimensions, 18 inches wide, 16 inches high and 18 inches deep.

The top is of heavy polished plate glass, 36x18 inches, with rounded corners, resting on rubber tips.

The Bottle Rack is made of heavy copper, polished and nickel plated, holds twelve spray tubes and twelve two ounce glass stoppered, salt mouth bottles. These bottles in crystal, blue, and amber are supplied with the cabinet.

The mirror is of the finest French bevelled plate with rounded corners. Mounted in half oval steel frame.

The body of the Cabinet is mounted on cast legs of graceful design. Mounted on easy rolling casters.

Dimensions of Cabinet, 32 inches high, 36 inches wide and 18 inches deep.

Finish is in highest grade of enamel, hand rubbed and baked.

OFFICE EQUIPMENT

"WHITE LINE" SPECIALIST'S CHAIRS

G-194. "WHITE LINE" SPECIALIST'S CHAIR A-1240

A chair designed to meet the requirements of the most exacting eye, ear, nose and throat specialist.

The back of this chair is so shaped as to afford the greatest comfort to the patient and is adjustable to any angle, adjustment being obtained by means of a foot pedal.

The round seat (revolving) is adjustable in height from 18 inches to 25 inches.

The head-rest gives the greatest range of adjustability in height, in angle (front and back) and in the tilt of the head-rest proper up and down.

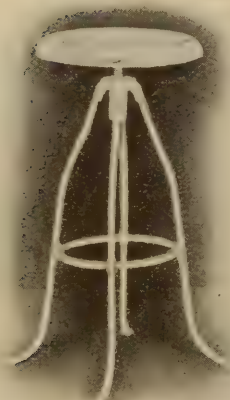

The chair is equipped with adjustable arm rests.

The frame and body of the chair are of wrought and malleable iron, finished in the highest grade of enamel, hand rubbed and baked. Arm rests, seat and chair fittings are finished in nickel plate or oxidized copper finish.

"WHITE LINE" SANITARY WASTE PAIL A-256

THE HASLAM MFG. CO.
MANUFACTURERS
MADISON, WISCONSIN

The neatest and most sanitary waste pail made; convenient for office or operating room.

Consists of an inner waste pail, with bail and handle, which is locked into a circular drum stand, by means of engaging bayonet shaped slots in the upper rim of the holding drum. A turn to the left releases the pail, and a turn to the right locks the pail in the drum stand. The waste pail can be emptied without soiling the hands.

The nickel-plated cover is opened and closed by means of a foot lever and connecting levers attached to the drum stand.

Finished in white enamel and nickel plate.

"WHITE LINE" HOSPITAL EQUIPMENT**OPERATING TABLES****G-472-474****GYNECOLOGICAL POSITION****(Table Fitted with Bierhoff Knee Crutches)****"WHITE LINE" PORCELAIN ENAMELED TOP OPERATING TABLES**

This type of "White Line" operating table has been on the market for so long, and has given such universal satisfaction, that it is unnecessary for us to go into a detailed description.

The tables as shown are an improvement on our original type of tables, rendered necessary by the positions required in late surgery.

The center section and foot piece are coated with porcelain enamel.

The adjustable head piece is made of brass, polished and heavily nickel plated.

The frame is of tubular construction, well braced throughout and finished in white enamel.

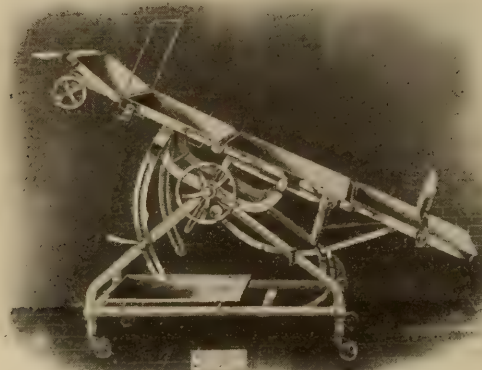

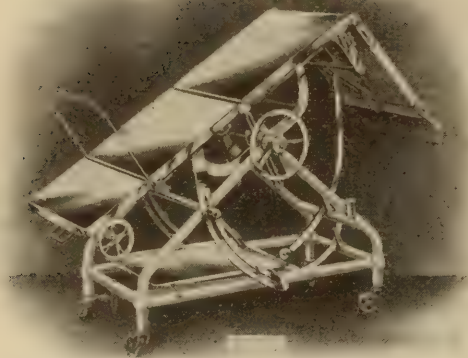

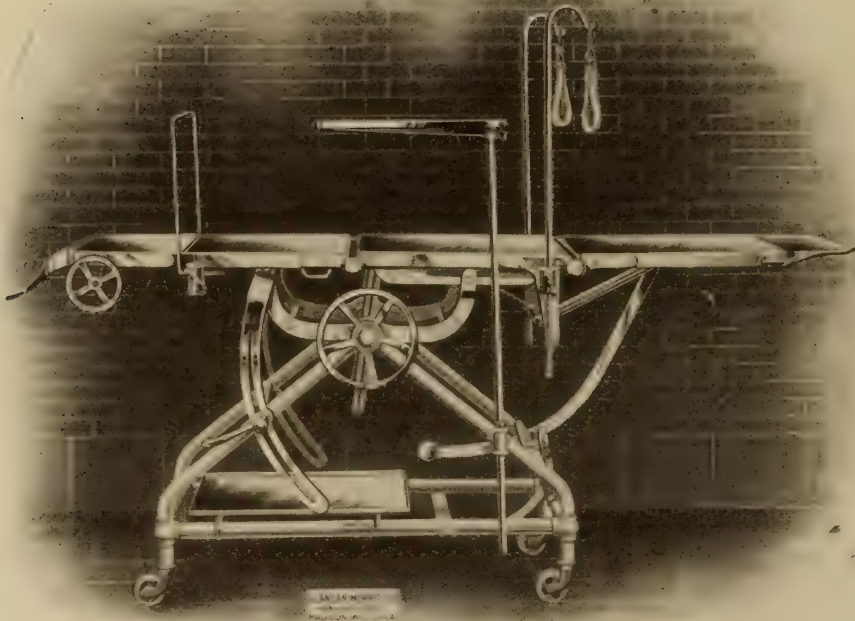

The foot rest is adjustable up or down on the foot piece of the table.

The tables are complete with adjustable shoulder crutches, Mayo Goitre attachment, Anaesthetizer's Screen, Shelf for sundries, and removable foot rest.

OPERATING TABLES

G-502. "MINNESOTA" OPERATING TABLE, No. 3

The "Minnesota" Operating Table, No. 3, embodies the most advanced mechanical ideas in table design and construction.

The table can be placed in all positions, and is always under the control of the anaesthetizer from the head of the table.

The table gives all positions used in advanced surgery, Trendelenberg, Reverse Trendelenberg, central body elevation, gynecic and horizontal.

The top is made of heavy copper, polished and heavily nickel plated.

The frame is of tubular construction, well braced. The frame is finished in white enamel. The fittings are of brass and steel, polished and heavily nickel plated.

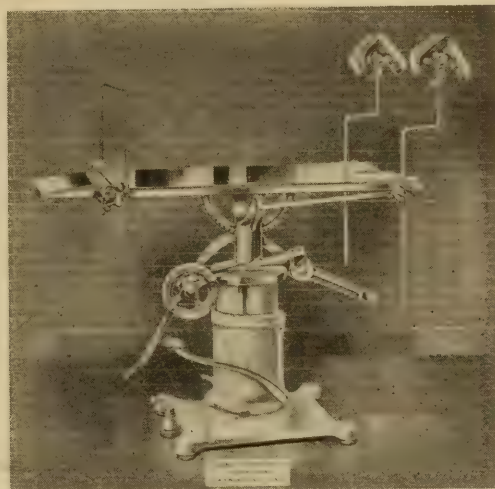

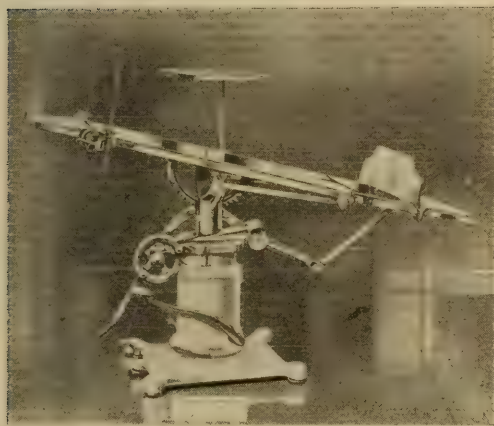

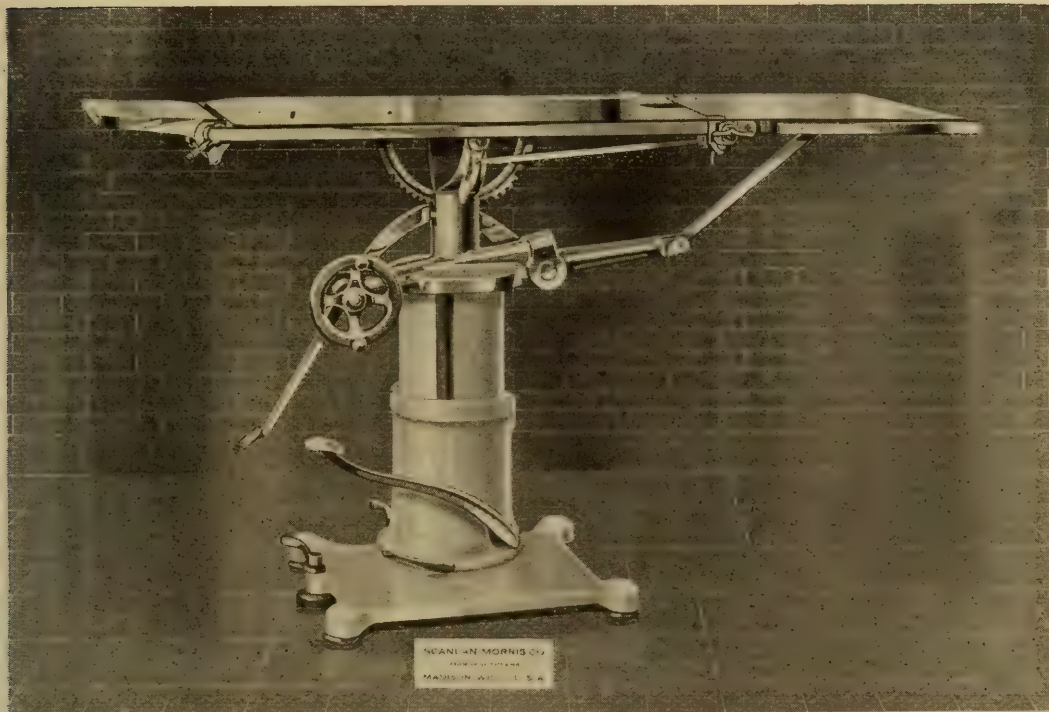

Head piece is adjustable by means of screw and travelling nuts; foot rest adjustable the entire length of foot piece.

The table is complete with Mayo Instrument Rack, Mayo Goitre Attachment, Mayo Adjustable Head Rest, Adjustable Foot Support, Anaesthetizer's Screen, Leg Holders and shelf for anaesthetizer's sundries.

G-502 "Minnesota" Operating Table, No. 3, complete as described.....Net \$200.00

WHITE LINE HOSPITAL EQUIPMENT

OPERATING TABLES

**G-492. THE "BALFOUR" OPERATING TABLE (MINNESOTA NO. 4)**

This table represents the very latest and highest type of table construction. It was designed by Dr. Balfour, of the Staff of Drs. Mayo, St. Mary's Hospital, Rochester, Minn., and is without doubt the best and most convenient table ever placed upon the market.

All positions are secured from the head of the table; all locks are positive; all levers travel with the pedestal of the table, and are always within reach of the anaesthetizer's foot, no matter in what direction the top has been revolved; a foot lever releases and locks the dog acting in conjunction with the toothed sector, securing angulation of the table top; a foot lever raises the table without effort from 34 to 42 inches in height; another foot lever lowers the top; another foot lever controls the revolving of the pedestal and top on its base; a hand wheel operating a worm gear in connection with the bracketed hinged arm supporting the foot piece, controls the dropping of the foot piece.

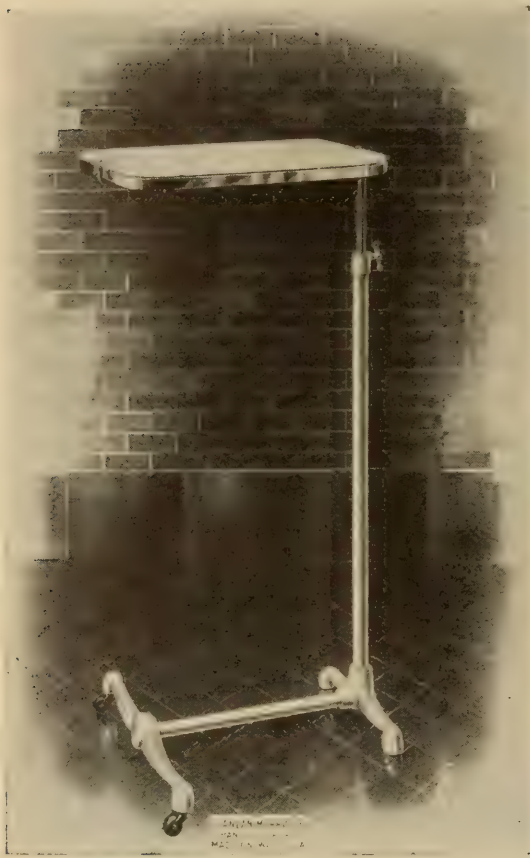

Top is made of Benedict nickel (non-corrosive), head piece is adjustable and locked at any angle by a simple ingenious mechanism, body elevator travels along entire center section of table and is elevated by means of worm gear.

The "Balfour" Table is complete with Mayo adjustable head piece, Mayo goitre attachment, instrument rack, adjustable elevator with sliding horns, Bierhoff knee crutches, shoulder crutches, clamps for wristlets or wrist bandages, and anaesthetizer's screen.

G-492 The "BALFOUR" Table, Minnesota No. 4, complete as described.....\$450.00

G-510

G-512

G-510. MAYO INSTRUMENT RACK

Mayo Instrument Rack is made with a low base that will slide under the operating table, and bring up over the patient the porcelain enamel tray that holds the instruments. The porcelain enamel tray (removable) is fitted into nickel-plated steel frame that can be raised or lowered and adjusted to suit the convenience of the operator.

Price\$10.00

G-512. MAYO INSTRUMENT RACK

Mayo Instrument Rack is made with a U-shaped base of bent steel tubing. The U-shaped base can be pushed under the operating table or around the legs of the operating table, bringing the porcelain enamel instrument tray exactly where the surgeon finds it most convenient. The porcelain enamel instrument tray (removable) is fitted into a nickel-plated steel frame that can be raised or lowered to suit the convenience of the operator. The U-shaped base is mounted on ball-bearing rubber casters.

Price\$12.50

G-505. MAYO INSTRUMENT RACK

This rack is the same as the G-510, without the base. The steel rod can be fitted into the lugs of the operating table, that hold the leg holder, and can be adjusted up or down.

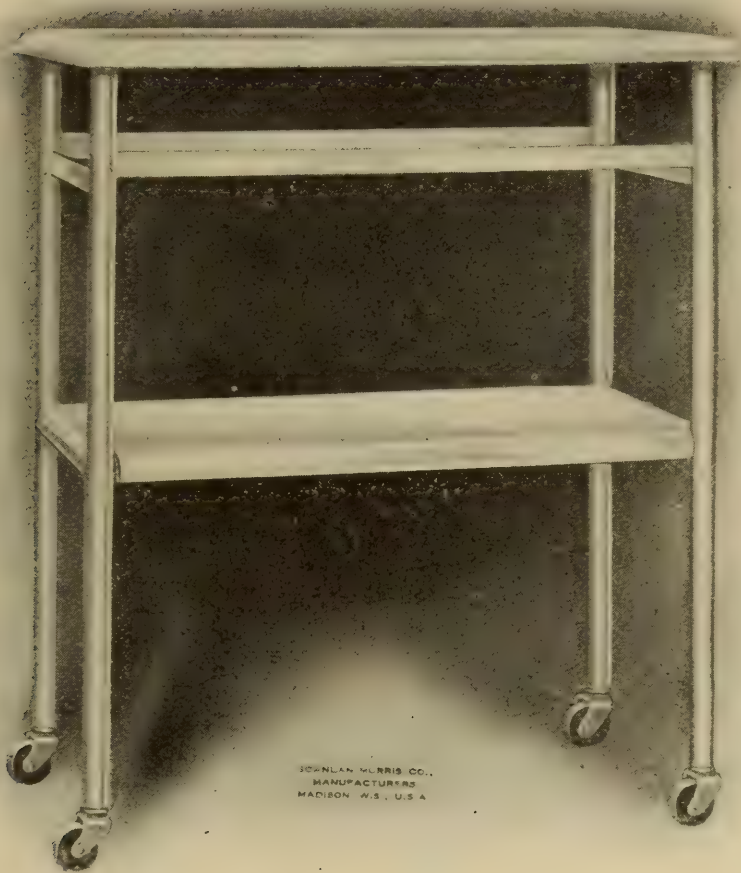

Price\$7.50

HOSPITAL EQUIPMENT

"WHITE LINE" INSTRUMENT TABLES

JOHN L. MORRIS CO.,
MANUFACTURERS
MADISON, WIS., U.S.A.

"WHITE LINE" PORCELAIN ENAMEL "ASEPTIC" TOP INSTRUMENT TABLES

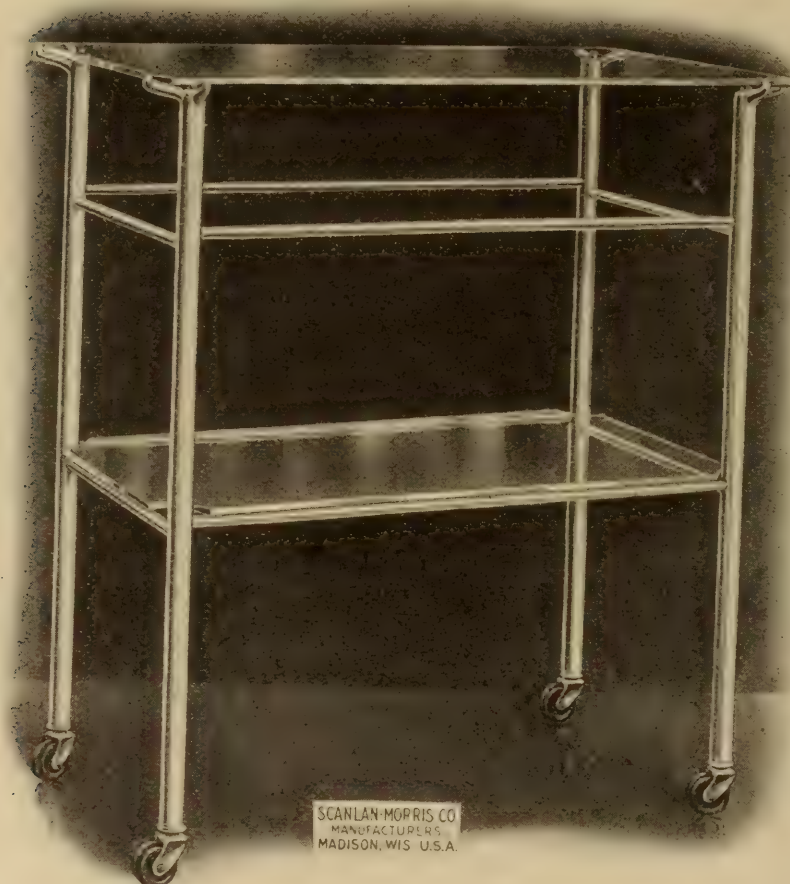

These tables are without doubt the best that have been designed up to the present time for hospital use. They are rapidly replacing the glass top tables, as the annual expense for glass breakage in large institutions using glass top tables is enormous.

The tops and shelves are made of special castings and are coated with a **pure snow-white porcelain** enamel, vitrified to the casting at a temperature of 1600 degrees Fahrenheit. They are temperature proof and are practically indestructible. They look clean, are easy to keep clean and can be made surgically aseptic. All corners and edges are rounded.

The frames are of tubular construction, **rigid** and **strong**. Our construction eliminating all corners or crevices. They are mounted on lignum vitae casters or rubber tips, as ordered. We will furnish with casters when not otherwise specified.

HOSPITAL EQUIPMENT

"WHITE LINE" GLASS TOP INSTRUMENT TABLES**"WHITE LINE" INSTRUMENT TABLES WITH GLASS TOPS**

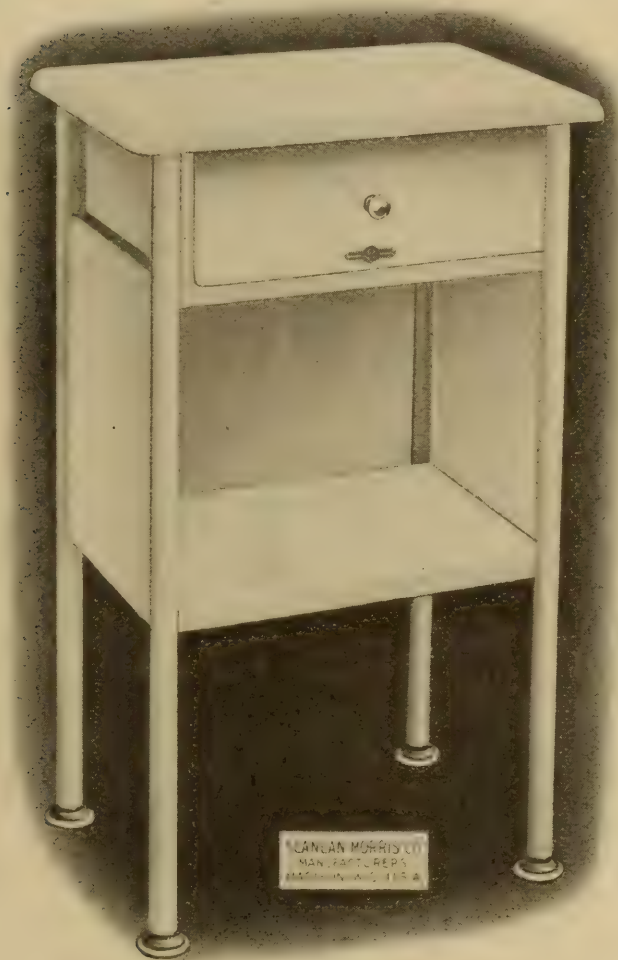

Our Instrument Tables with glass tops and shelves are designed and constructed on the same lines as our "White Line" Porcelain Enamel Top Tables.

The tops and shelves are of heavy plate glass, having polished and beveled edges. They rest on rubber tips and are held firmly in position by special claw corner castings.

The frames are of tubular construction, are strong and rigid, are mounted on Lignum Vitae casters or rubber tips, and are finished in white enamel, hand rubbed and baked.

HOSPITAL EQUIPMENT

WOLFF'S HYDRO-THERAPEUTIC APPARATUS

G-810. "WOLFF" CONTROLLING TABLE, W-202

"Wolff" Controlling Table of Italian marble, arranged with two mixing chambers, two Scotch douches with valves, one steam douche with valve, valve for needle sprays and valve for shower, with one special high class clock with jewel bearings, two special nickel-plated brass thermometers, one for each mixing chamber, two nickel-plated brass water pressure gauges, electric alarm connection to each mixer to indicate excess of temperature, nickel-plated pedal drain valve for each mixer and two sets of quick opening douche valves cross-connected. The electric alarm device is contained in a small marble wall cabinet with marble doors and heavy nickel-plated hinges. All valves are of the quick opening type.

The table is equipped with double marble doors and heavy hinges and lock so that interior of table is easily accessible.

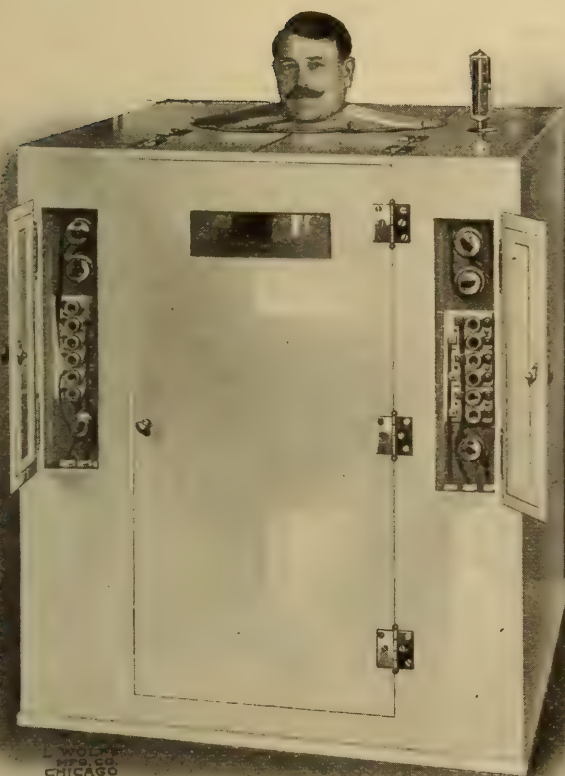

Dimensions: Length, 36½ inches; width, 27 inches; height, 32 inches.

Write for prices.

HOSPITAL EQUIPMENT

"Wolff" Electric Light Cabinet

G-815. "WOLFF" ELECTRIC LIGHT CABINET, W-267

The "Wolff" White Enameled Steel Electric Light Cabinet made of a heavy grade of steel and thoroughly insulated with asbestos. It is provided with one Front Door with Inspection Panel of heavy plate glass, hung on heavy Nickel Plated Cast Brass Hinges and secured by a heavy Nickel Plated Cast Brass Latch; in addition it has two top Doors hung on Nickel Plated Cast Brass Hinges. The front face of the cabinet is provided with two Fuse and Switch Boxes set flush with its surface with Doors equipped with heavy Nickel Plated Cast Brass Hinges and Latches. The entire cabinet is built in two sections to facilitate installation.

There are in the equipment of this Cabinet 54 White and 16 Blue Incandescent Electric Lamps. All of the Blue Lamps and 50 of the White Lamps are arranged in perpendicular series on the walls of the interior and four of the White Lamps are set in the Foot

Boxes in the floor properly protected by perforated Aluminum Plates.

We have incorporated the Blue Lamps in our equipment because of the greater Radio Activity claimed for the Violet of Actinic Rays transmitted through this color of lamp. The highest type of insulation has been employed in wiring this cabinet and the arrangement of switches gives perfect control of the lighting system.

The Plate Glass Mirrors which line the Perpendicular Surfaces of the interior of the cabinet are arranged octagonally, thus securing a concentration of the reflected rays of light at the central spot occupied by the patient.

In addition the "Wolff" Cabinet is equipped with a Canvas Neck Shield with Nickel Plated Gromets to slip over the hooks on the top of the cabinet, a Nickel Plated Cast Brass Thermometer for registration of the temperature in the cabinet and an Enameled Steel Revolving Stool.

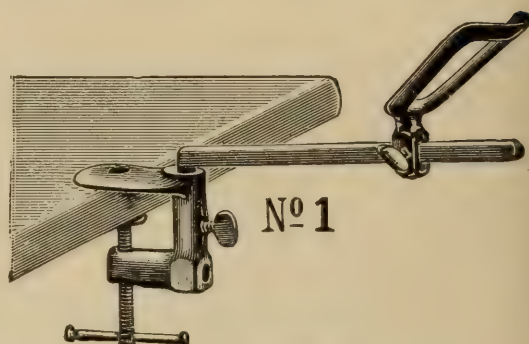

The "Wolff" Electric Light Cabinet is so arranged that connection can easily be made with the regular house circuit.

INVALID COMFORTS

BEDSIDE TABLES

G-1575. "WHITE LINE" BEDSIDE TABLE (PORCELAIN ENAMELED TOP)

The "White Line" Bedside Table is the most attractive table of this type that has ever been offered to the hospital or patient.

The table top is made of heavy sheet steel, 16x24 inches, with rounded edges, and is covered with white porcelain enamel that is as clean as glass and looks cleaner. It is temperature proof and will not readily mar or chip. A sector attached to the table top works in any groove on the telescoping upright, and can be locked at any angle by a large T head set-screw.

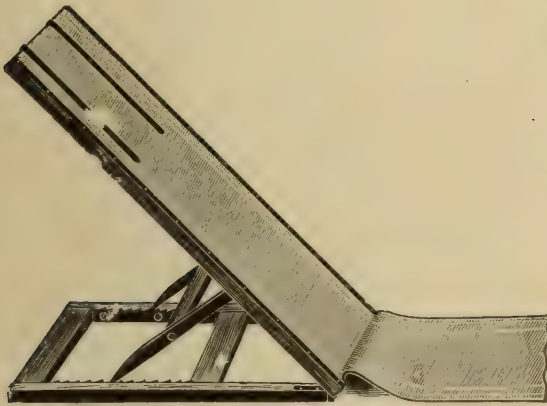

The height of the table can be regulated by means of a telescoping standard, working in a base upright, and locked with large head set screw.

The base is of iron pipe and gray iron castings. Two feet are mounted on easy rolling casters.

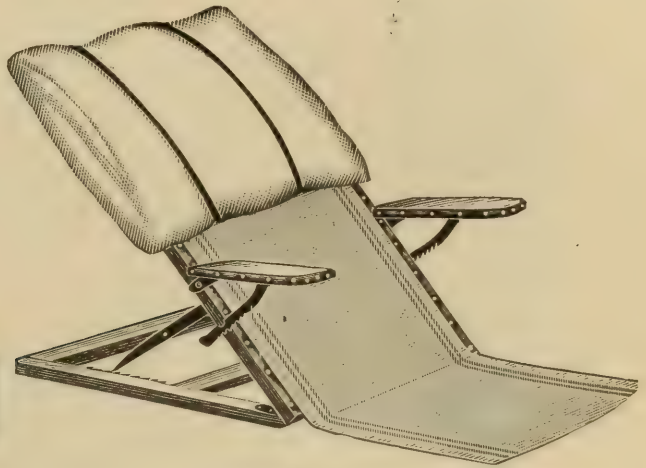

The base and upright are finished in white enamel hand rubbed and baked. The fittings are polished and nickel plated.

G-1575 "White Line" Bedside Table, with Porcelain Enameled Top.....\$12.00

G-1574. FOLDING BED TRAY NO. 136

These bed trays are made of hardwood, finished and varnished in the best manner. The legs are held in position either when folded or open by a strong brace, and the trays are substantial in every way. Folded they are only 3x15x23 inches.

Price\$3.00

THE "STANDARD" BEDSIDE
TABLE

For those desiring a good substantial bedside table at a moderate price, we can recommend our "Standard" table. It is substantially made, is adjustable in height, the table or tray can be set at any angle. It is well-finished and will meet the requirements of those who cannot afford to pay a higher price.

The top is made of oak or birds-eye maple, as listed, and is finished in natural grain. The frame is enameled in black, brown or white,

INVALID COMFORTS

GENDRON ROLLING CHAIRS RECLINING ROLLING CHAIR

With rear swivel wheel of large diameter, 14-inches. We particularly recommend this chair as being one of the easiest to handle and to manipulate. This idea is entirely original with us and has been a source of much pleasure to many, who praise it highly for these qualities. Furnished regularly with hand rims on large wheels, that will allow patient to propel chair forward or backward, or turn in either direction at will.

ROBINSON TURKISH BATH CABINETS

No need for physicians to send their patients to Hot Springs or a Sanitarium, as the Robinson Folding Bath Cabinet will give them as good treatment in their own homes. The only Cabinet made with four curtain top, also four different temperatures, avoiding a chance in taking cold. Many thousands of people have been assisted to recovery from weakness, over-fatness, rheumatism, gout, neuralgia, sciatica, colds, la grippe, bronchitis and pneumonia, kidney and bladder trouble, liver and stomach trouble, constipation, etc., by the Robinson Turkish Bath Cabinet.

Our Cabinet puts you in a position to take any of the Turkish, Russian, Vapor or Medicated Baths, and which cost from \$1.00 to \$2.00 each in a regular bath house; Robinson Cabinets bring these baths within the reach of all. Costs only 2 cents a bath.

Robinson Bath Cabinets are unique and original in design, and are made on the most scientific principles. When set up ready for use they occupy a space of 28x30 inches and are 42 inches high. When not in use the steel frame folds in one inch space. The top is in four pieces, securely sewed to the sides and overlapping each other at four corners, giving four

different temperatures of heat, which is a great convenience when entering the cabinets as well as when cooling off.

PRICE LIST

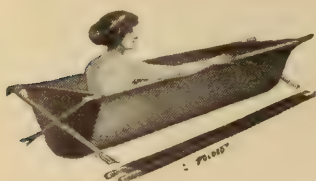

- No. 3. Single wall, rubber lined, steel cabinet. Folds in one inch space. The covering is the best cabinet drill of an attractive printed design; complete, including our No. 2 Heater (improved) and directions.....\$5.50
- No. 2. Heavier material than in No. 3, with No. 1 Heater, wood or steel frame.. 7.50
- No. 1. Double wall, wood or steel frame cabinet, wood frame made of thoroughly seasoned poplar, will stand either dry heat or vapor without warping; air space of one inch between walls which are non-absorbent, germ-proof, and easily rendered aseptic; folds in six inch space, steel frame two inches; two thicknesses of cloth laid together, complete including our No. 1 Heater (improved). No. 1 Face Steamer.....12.50

BATHS IN BED FOR THE SICK

The Robinson Reclining Cabinet is made in two sections, being easily lengthened or shortened. When in use it is 65 inches long, 20 inches wide at the top, 30 inches wide at the bottom and 14 inches high. When closed the Cabinet is only 2 inches thick, 14 inches wide and 30 inches long. It weighs but 12 pounds. Extra sizes made to order at small additional cost.

This Cabinet comes at two prices, \$10.00 and \$15.00. The \$15.00 Cabinet is made of double faced goods and lined. Rubber finish inside and out, no cloth showing, germ-proof, cannot be soiled and is easily sponged off after using. This is the best grade for physicians.

The lower grade Reclining Cabinet is made of single thickness cloth, with black rubber finish on the inside and cloth on the outside.

The Robinson Folding Bath Tub, guaranteed for 10 years, can be used in any room in the house and when not in use can be folded up

and laid away. Made of our exclusive Steeline Vulcanized material. Hot or cold baths can be taken. Size, inner dimensions, 5 feet long, 27 inches wide, 16 inches deep. Same size as ordinary bath tub; weighs but 15 pounds. Price.....\$10.00

ODORLESS, SANITARY, GERM-PROOF

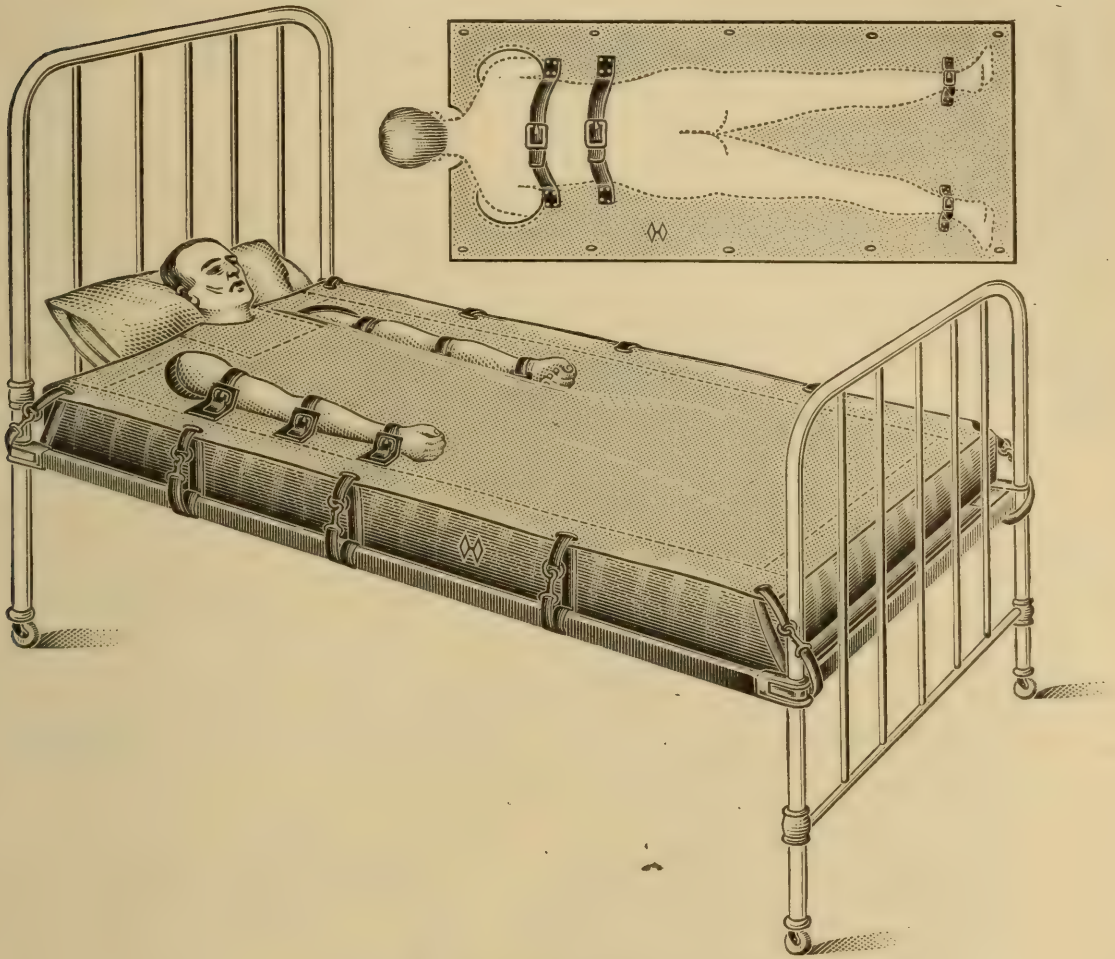

Every home without sewerage needs one. Most convenient, meritorious home necessity in a century. A boon to sick people. Can be placed anywhere in the house.

MAKES OUTDOOR PRIVY UNNECESSARY

Put a warm Comfort Toilet in your home; a guarantee of healthy, sanitary conditions. Germs killed by chemicals in retort. Emptied once a month—no more trouble than throwing out coffee grounds. Need no other attention. Boards of Health endorse it. Price.....\$18.50

HUMANE RESTRAINTS

G-1695 SAS HUMANE RESTRAINT SHEET

The accompanying cuts show the Restraint-Sheet and Straight-Jacket Combined as it appears when in use, and also the upper and under surfaces. It can be very easily and quickly adjusted to any bed, cot or surgical table, and while it holds the patient in such a manner as to make it a matter of utter impossibility for him to escape, it makes it equally impossible for him to expose his person or to do himself any injury. After the patient has been confined in the Restraint-Sheet and Straight-Jacket Combined he may be left alone if necessary, for it does not require the care and attention of a nurse or attendant to keep the Sheet in place. The strongest man is helpless as an infant, once he is confined in the Sheet.

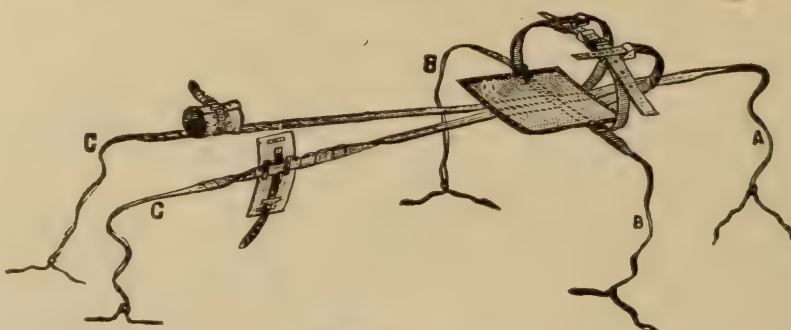

The Restraint-Sheet and Straight-Jacket Combined is made of heavy cotton duck, which is very durable. The main body of the Sheet is reinforced in two, three and four-ply, according to the strain put upon the part, the whole being quilted with rows of stitching, which lie two inches apart. The arm and ankle straps, as well as the neck and arm holes, are lined with Canton Flannel, to prevent chafing. Four grommet rings are provided on each side in which to work the straps which confine the sheet to the bed. Price\$15.00

NOTE

We have not sufficient space in this catalogue for the illustration and description of artificial limbs—Special literature on this subject will be mailed upon request.

A WORD WITH YOU

In presenting this portion of our catalogue to our patrons, we find it impossible to illustrate all of the many forms of braces that we manufacture; we are, therefore, obliged to confine ourselves to those patterns most in use, assuring you that we are in a position to manufacture special apparatus of every description, and where patients are sent to us, to take full charge of them until accurately fitted.

SPECIAL INSTRUCTIONS

1st. We would call attention to the necessity of **accuracy in measurements** and **explicit instructions** for the making of each apparatus. We **guarantee** every appliance sent out by us to correspond exactly with directions and measurements furnished us, and any omissions or errors on our part will be corrected without extra cost to the patient. As this class of apparatus is only manufactured to order, physicians will see the necessity of requiring their patients to pay a portion of the amount when the order is taken, and the balance on the delivery of the brace.

Experience has shown us that appliances of this character are more or less uncomfortable when first worn, and that patients are at that time easily discouraged or dissatisfied with trivial matters; while we will make such changes as are necessary without charge (where the fault is ours), we must ask physicians to protect themselves and us to the fullest extent.

Many physicians of long experience in handling this class of cases collect at least one-third in advance, remit the same to us and direct us to forward the apparatus, as soon as finished, direct to the patient, collecting the balance C. O. D., thus relieving them of all financial responsibility. We suggest this plan because of the numerous requests made by physicians for an extended credit on appliances of this kind, they claiming that they could not afford to pay us cash for them and wait the will and pleasure of their patrons.

Where shoes are to be worn with braces, we urgently request customers to furnish them (sending them to us by registered mail, carefully addressed), for we find it next to impossible to secure well-fitting shoes from measurements furnished us, and quite frequently we are compelled to pay a price far in advance of what patients can obtain them for at home. Where we furnish shoes they are not returnable, as we take no responsibility as to their fitting the patient.

H-60

H-5 Apparatus for Over-riding or Hammer Toes. Price, each from \$5.00 to....\$15.00

The apparatus consists of a steel sole arranged with a slit or slits corresponding to the space between the toes. A strap passes through these slits over the contracted toe and is buckled or tied under the sole, tense enough to straighten the toe. It is kept in place by an elastic band. Measurements required: 1, Tracing of foot. 2, Circumference of ball of foot. 3, Circumference of instep (B).

H-10 Apparatus for Bunions, Seseman's Improved Form. Price, each.....\$8.00

This apparatus acts as a lever to draw the great toe into normal position, the fulcrum being not the bunion itself, but a point just back of the great toe joint. The illustration shows the mechanism very clearly. In ordering send careful tracing of foot.

H-15 Apparatus for Bunions, London's Improved. Price, each.....\$2.50

In ordering mention size of shoe, state whether brace is for right or left foot, and send outline drawing of the naked foot. Also measure the circumference of the great toe, also measure waist of foot.

H-20 Ankle Brace, Pugsley's. Price, each, from .35 to.....\$1.25

H-21 Ankle Brace, Pugsley's. Lined. Price, each, from .50 to..... 2.00

These supporters are made of thin stiffened sole leather, conforming anatomically to the shape of the ankle, and are to be worn inside the shoe.

H-22 Ankle Brace or support, Collis. Black sateen, men's sizes 6 to 12, women's sizes, 3 to 8. Each.....\$0.75

H-23 Ankle Brace or Support, Collis. Black leather, men's sizes, 6 to 12, women's sizes, 3 to 8. Each..... 1.00
Children's sizes, 11-12-13-1-2. Each..... .65

H-30 Arch Instep Support, London's Full length, leather covered both sides. Per pair 2.50

***H-31 Arch Instep Support, London's.** Half length, leather covered both sides. Per pair 2.00

H-32 Arch Instep Support, Arrowsmiths'. German silver, with heavy leather tops. Per pair, from \$4.50 to..... 5.50

H-33 Arch Instep Support, Foot Eazer. Two German silver springs, one sliding upon the other; heavy leather top. Per pair..... 2.50

H-34 Arch Instep Support, O. K. German silver spring; sole leather top. Per pair 2.00

H-36 Arch Instep Support, Tri Spring. Is constructed with three springs of German silver, leather top..... 3.50

H-45 Arch Instep Support, Whitman's. Price, each, \$3.00 to..... 4.00

This support is designed to meet special cases of flat foot where the regular stock style of supports will not correct the deformity. They are made of steel or German silver, fitted to a plaster cast of the foot, which must be sent with order if a satisfactory result is to be obtained.

H-50 Extension Shoe, with cork or willow wood sole. Price, each, \$8.00 to.....\$14.00

H-55 Extension Shoe, with continuous steel extension frame. \$7.00 to..... 9.00

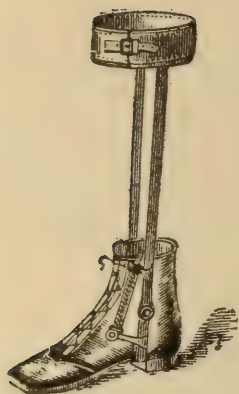

DIRECTIONS FOR MEASUREMENTS

Have patient stand erect with both feet bare. Place two piles of blocks or books, one under the heel, and the other under the ball of the foot, building them up until the weight of the patient is evenly distributed, and the pelvis and shoulders are on a horizontal plane. Measure these two piles and forward result to us. Send a well fitting shoe.

H-60 Extension Shoe, Improved. Price, from \$25.00 to.....\$35.00

This apparatus consists essentially of an inclined sole placed on the inside of the shoe. It is fitted either directly to the inside sole of the shoe, with the uppers enlarged to accommodate the heel, or forms part of an inner shoe or sandal which laces to the foot and fits into an outer shoe the size of the one worn on the sound limb. With either style the dress or trousers cover the projection of the heel, so that no deformity is noticeable.

ORTHOPEDIC APPARATUS

H-75 Improved Apparatus for Talipes Calcaneus. Each, \$10.00 to.....\$12.00

A spiral spring working between two brackets, one above and one below the ankle joint, depresses the front part of the foot by extension.

H-80 Improved Apparatus for Talipes Equinus. Each, \$10.00 to.....\$15.00

An elastic band or muscle attached to a bracket below this ankle joint and fastened to calf band above. Can be regulated to secure the exact tension necessary to overcome the deformity.

H-90 Improved Apparatus for Varus or Valgus. Each, \$10.00.....\$15.00

A shoe with metal sole, jointed near the heel allows lateral motion. A spiral spring at the side for traction and another spiral spring from ball of foot to calf band exercises the tension necessary to make correction of the deformity.

H-100 Weiner's Improved Apparatus for Club Foot. Each, \$15.00 to.....\$18.00

An inner sole of German silver, covered with leather is fastened to inner edge of shoe. A strip, passing through a slit in the shoe and terminating in an elastic muscle, is attached below the calf band, which when drawn tight turns the foot inward and upward to make the desired correction.

H-105 Wyeth's Club Foot Shoe. Each.....\$10.00**H-110 Detmold's Ankle Brace.** Each, \$7.50 to..... 10.00

For weak ankles and after treatment of club foot. A wire tempered steel spring is attached to the shoe and terminates at the top in a calf band. The bending of this spring is forward and outward and when brought to the leg, by its padded bands, lifts the toes and averts the foot so as to bring the sole of the latter to the floor.

H-115 Weak Ankle Brace. Price, each, \$7.50 to.....\$10.00

Consists of a well fitting laced shoe, two steel uprights with joint at ankle, a stirrup passing under instep and attached to shoe, a well padded calf band, and a pad on inner or outer side as the case might indicate.

H-120 Weak Ankle Brace. Price, each, \$9.00 to.....\$12.00

Same general construction as H-115, with the addition of an elastic muscle, for elevating the toes, when a contracted tendo-Achillis is indicated.

H-125 Weak Ankle Brace. Price, each, \$7.50 to.....\$10.00

Same general construction as H-115, with broad strap at ankle in place of pad.

MEASUREMENTS REQUIRED

1. Patient's name and sex.
2. Right, left, or both feet.
3. Length from floor to ankle joint.
4. Length from floor to calf.
5. Circumference of ankle joint.
6. Circumference of calf.
7. Send outline drawing showing shape of foot or feet.
8. Any additional information.

MEASURE FOR SHOES

- a. Length of sole of foot, inches.
- b. Circumference ball of foot, inches.
- c. Circumference of instep, inches.
- d. Circumference above ankle, inches.

H-140 Single Bar Apparatus for Bow-Leg. Price, each, from \$9.00 to.....\$11.00
Per pair, from \$17.00 to..... 21.00

This apparatus has one supporting bar, jointed at the ankle, and with pads at the knee and ankle-joints. The bar is fastened on the shoe and placed on the inner side of the leg, where it is secured by a well-padded band passing around the limb below the knee. A wide bifurcated band passes around the curved part of the leg and is fastened by straps attached to both ends of the band to buttons placed on the steel bar for this purpose.

H-145 Double Bar Apparatus for Bow-Leg. Price, each, from \$12.00 to.....\$15.00
Per pair, from \$22.00 to..... 25.00

The limb is supported by two steel bars, one on the outer and one on the inner side of the leg, fastened below to the shoe and above to a band surrounding the thigh. These bars are jointed at the ankle and knee to allow perfect freedom of motion. They are kept in place by the thigh-band, and also by a band below the knee.

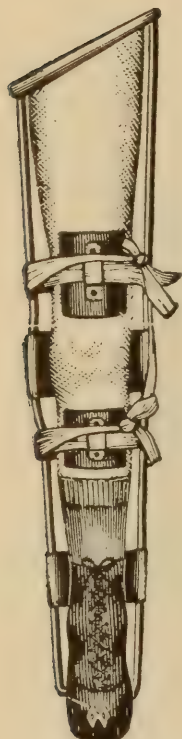

The deformity is corrected by pads placed respectively against the ankle and knee on the concave side of the limb, and a wide leather band passed around the highest point of the arc.

MEASUREMENTS REQUIRED

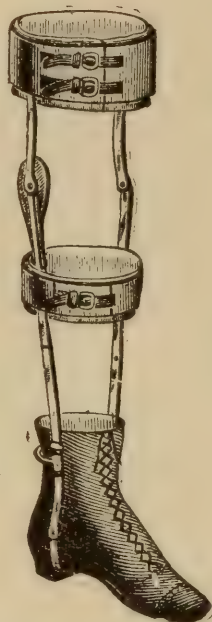

1. Patient's name, sex, age, weight.
2. If wanted for right, left, or both legs.
3. Length from sole of foot to ankle joint, inner side.
4. Length from sole of foot to knee joint, inner side.
5. Length from sole of foot to knee joint, outer side.
6. Length from sole of foot to lower third of thigh, inner side.
7. Length from sole of foot to most prominent part of arc.
8. Circumference at ankle joint.
9. Circumference at calf.
10. Circumference at knee joint.
11. Circumference at lower third of thigh.
12. Send well fitting pair of strong, laced shoes.

NOTE—Strong lace shoes should be sent us. If we furnish shoes, they will be charged extra.

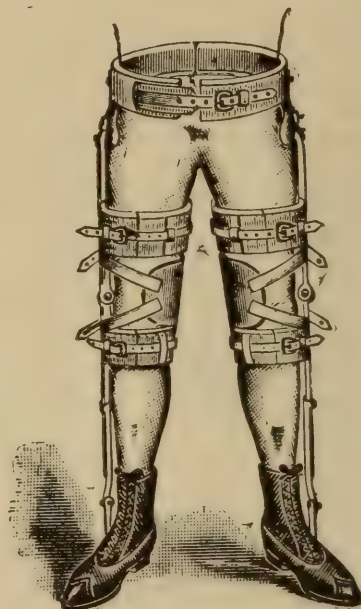

ORTHOPEDIC APPARATUS

H-172

H-150

H-155

H-150 Plain Apparatus for Knock Knee. Price, each, from \$12.00 to.....\$15.00

The one represented is the simplest and most convenient in slight cases for the patient to wear, while its efficacy is none the less. It consists of a plain shoe, to which two lateral steel bars, reaching to the upper third of the thigh, are attached, and connected with calf and thigh bands; it is provided with joints corresponding with the natural articulations to allow locomotion. The knee is confined in its normal condition by a well-padded pad.

H-155 Knock Knee Apparatus. Price, per pair, \$30.00 to.....\$40.00

It consists of two lateral stems, with joints at the ankles, knees and hips, extending from the heels of strong shoes to a well-padded pelvic band. The pelvic band is made in two halves in order to admit of adjustment—the tightening of the posterior buckle everting the toes, that of the front buckle inverting them. Two well-padded leather caps placed on the inside of the knee joints are buttoned to the steel bars on the outside. Well-padded steel bands encircle the leg above and below the knee pads, holding the brace in proper position.

MEASUREMENTS REQUIRED

1, Patient's name and age. 2, Length from sole of foot to ankle joint, inches. 3, Length from sole of foot to knee joint, inches. 4, Length from sole of foot to hip joint, inches. 5, Length from sole of foot to iliac crests, inches. 6, Circumference of ankle joint, inches. 7, Circumference of calf, inches. 8, Circumference of knee joint, inches. 9, Circumference of middle of thigh, inches. 10, Circumference of body 2 inches below crest of ilium, inches. 11, Right, left, or both legs. 12, Send tracing of leg or legs with patient in recumbent position.

Send us a pair of well fitting, strong laced shoes. Shoes will be charged extra if we furnish them.

H-172 Thomas' Knee Splint. Price, each, \$10.00 to.....\$12.50

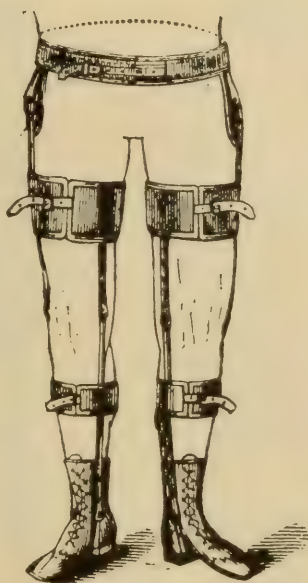

The caliper splint consists of a ring and two side-bars of strong iron wire. The ring slopes from without inward, and from before backward, so that the part upon which the tuberosity of the ischium rests is its lowest part; it is bent to such a shape that when properly padded it shall fit the outline of the upper thigh, following fairly accurately the gleuto-femoral crease and the groin. The ring is padded with felt and covered with basil leather.

1, Length from floor to perineum, inside of leg. 2, Length from floor to trochanter, outside. 3, Circumference of ankle joint. 4, Circumference of calf. 5, Circumference of knee. 6, Circumference of upper third of thigh. 7, Outline drawing of leg.

ORTHOPEDIC APPARATUS

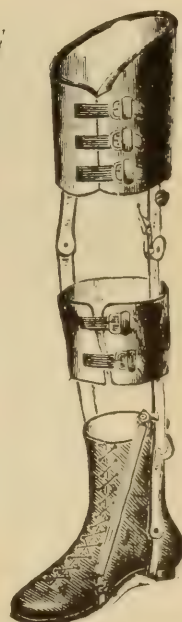

H-210

H-185

H-215

H-205

H-185 Apparatus for Support of Weak Limbs. Adults', price, \$25.00 to.....\$70.00

H-190 Apparatus for Support of Weak Limbs. Children's, price, \$25.00 to.....\$35.00

This apparatus is for the support of weak legs when, by reason of relaxed joints, softening of the osseous structure or partial paralysis, they cannot quite bear the weight of the body, but when the muscles still retain some power to perform their respective functions. Very light steel springs are secured to shoes, and carried up the sides of the legs to the pelvis; they are provided with joints corresponding to the natural ones, and secured to calf, thigh and pelvis by well-padded bands and buckles.

***H-195 Apparatus for Support of Weak Leg.** Adults' Price, \$25.00 to.....\$40.00

***H-200 Apparatus for Support of Weak Leg.** Children's Price, \$15.00 to..... 20.00

This apparatus is similar to H-185, and is intended for the relief of cases where only one limb is affected.

H-205 Lock Joint Apparatus for Paralysis. Price, each, \$30.00 to.....\$40.00

This apparatus is made for paralysis of one limb. By an improved mechanism the knee-joint is locked while walking, and to enable the wearer to sit down, a lever is arranged at the joint, which, when pressed with the finger outside of the clothing, above the knee, unlocks the joint and permits bending of the knee. In rising and straightening the joint automatically locks itself. The side bars and ankle and knee-joints are made somewhat stronger than in those cases in which the patient has control of the knee-joint.

A strong piece of elastic webbing, designed to overcome muscular contraction, extends from the sole of the shoe to the bar above the ankle. The encasements for the thigh and leg are of strong leather and are well padded.

H-210 Apparatus for Paraplegia. Price, \$35.00 to.....\$70.00

This apparatus excites the muscles to action, aiding them by artificial substitutes, made of elastic rubber or steel, placed on the brace so as to gently exercise the affected parts. We attach these artificial muscles for flexion or extension, as the case may require. The apparatus is riveted to the shoes and consists of two strong upright bars for each leg, jointed at the ankle, knee and hip; to which steel bands, well padded, are fastened, encircling the leg and thigh. We make these appliances either with plain joints or with joints having coiled springs at the knee by which, when the leg is bent backwards and the power relaxed, it will involuntarily spring forward.

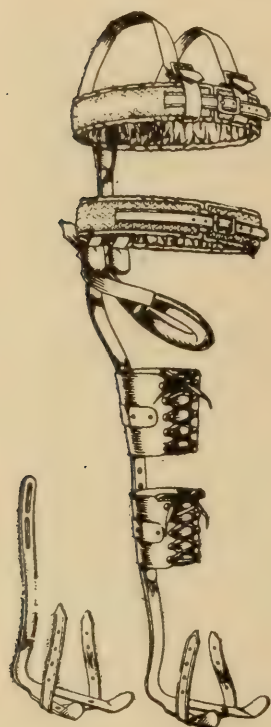

H-215 Apparatus for Hemiplegia. Price, \$25.00 to.....\$40.00

Apparatus same as H-210, but intended for one leg only.

MEASUREMENTS REQUIRED

1. Patient's name and description of the case.
2. Patient's age.
3. Right, left, or both legs.
4. Length from sole of foot to ankle joint, inches.
5. Length from sole of foot to knee joint, inches.
6. Length from sole of foot to trochanter major, inches.
7. Length from sole of foot to crest of ilium, inches.
8. Circumference of calf, inches.
9. Circumference of knee, inches.
10. Circumference above knee, inches.
11. Circumference of thigh, inches.
12. Circumference of pelvis one inch below iliac crests, inches.
 - a. Length of sole of foot, inches.
 - b. Circumference of ball of foot, inches.
 - c. Circumference of instep, inches.
 - d. Circumference above ankle, inches.

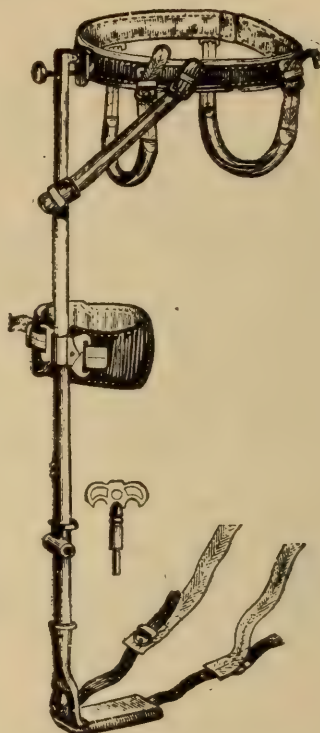

ORTHOPEDIC APPARATUS

H-230

H-225

H-220

H-220 Sayre-Taylor Long Hip Splint. Price, \$25.00 to.....\$40.00

This apparatus consists of a well-padded pelvic band having two perineal straps, a hollow steel upright connected to the pelvic band by a rotating hinged base, with screw for abduction, a well padded band at the knee and a cross piece below which acts as a foot rest. Extension is made by means of a rack and pinion mechanism in the lower part of the upright. Straps attached to the cross piece are buckled to the shoe or to adhesive strips properly applied above the ankle.

MEASUREMENTS REQUIRED

1. Sex, weight and age of patient.
2. Length from sole of foot to crest of ilium, inches.
3. Length from sole of foot to center of knee joint, inches.
4. Circumference of body 1 inch below crest of ilium, inches.
5. Circumference of knee joint, inches.
6. Right or left leg.
7. General condition of patient.

H-225 Thomas' Hip Splint. Price, leather covered, \$10.00 to.....\$15.00
Extension, extra, \$6.00 to.....10.00

This apparatus is designed to immobilize the hip joint, and consists of a flat steel posterior band extending from the scapula to the calf of the leg, a band passing around the chest, a band passing around the pelvis below the iliac crests, a band around the middle of thigh, and one around the calf. If necessary shoulder straps are attached to the chest band to hold brace in proper position. The splint is designed to be worn with an extension on the sound foot, as illustrated.

H-230 Davison's Modification of Thomas' Hip Splint. Price, including cork extension, \$30.00 to.....\$35.00

This splint is used in hip joint troubles and fractures of the neck of the femur in old people. The splint is more easily applied and more comfortable than the regular Thomas splint. The general construction is the same as in the Thomas splint, with the addition of laced leather shafts to the original iron bands of Thomas' instrument. Chest and pelvic bands are well padded and comfortable. A well padded strap passes under the tuber ichium and is fastened to the pelvic band in the rear, thus supplying counter extension. The detachable nurse H is attached by means of straps to the shoe, which is furnished with buckles.

This splint is especially desirable when the surgeon finds it necessary to get the patient up and moving around. The entire limb is extended in the frame and the nurse H keeps the leg in proper position. An extension shoe $1\frac{1}{2}$ or 2 inches high is worn on the sound limb. Patients must furnish their own laced shoes.

MEASUREMENTS REQUIRED

1. Stand patient on sound leg, placing books or blocks under the diseased leg until the spine is straight. Take piece of strip lead and make countour of limb from scapula, over buttock and posterior part of leg, to point below the swelling of the calf. Transfer to paper, marking off calf, knee joint, middle of thigh, and crest of ilium.
2. Circumference below calf, inches.
3. Circumference of calf, inches.
4. Circumference of knee joint, inches.
5. Circumference of lower third of thigh, inches.
6. Circumference of upper third of thigh, inches.
7. Circumference 2 inches below crest of ilium, inches.
8. Circumference of chest under axillae.

BRACES FOR ANTERO-POSTERIOR CURVATURES

- H-280** Stillman's, Anterior-Posterior Brace. Price, from \$30.00 to.....\$40.00

This brace is composed of a light double pair of springs. The under springs are somewhat shorter and are provided with a pad at their extremities for pressure on the dorsal region when the brace is applied. By means of ratchets the power of the springs is regulated. To make the brace effective, the curves of the under springs are made the reverse of the curves of the deformity.

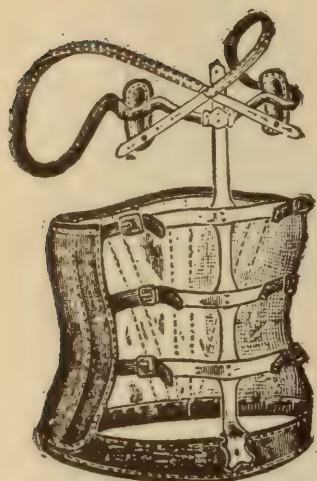

- H-285** Nyrop's Antero-Posterior Brace. Price, from \$12.00 to.....\$15.00

This brace consists of a steel pelvic band well padded, to which is attached a tempered steel upright, so shaped as to exert a corrective force upon any upper dorsal flexion, a metal cross piece at the upper end of the upright terminates in round auxiliary straps. Measurements required, same as H-280.

MEASUREMENTS REQUIRED

1, Sex of patient. 2, General appearance of patient. 3, Lay a soft piece of lead wire along the back, moulding it exactly to the spine, from the seventh cervical vertebra to the middle of the sacrum. With this pattern trace carefully the shape of the spine on a sheet of paper, marking the points opposite the upper and lower borders of the scapula and the crest of ilium. 4, Circumference of body between crest of ilium and trochanter major. 5, Circumference of body at waist. 6, Circumference of body under axilla. 7, Distance between the upper borders of the scapula. 8, Distance between the lower borders of the scapula.

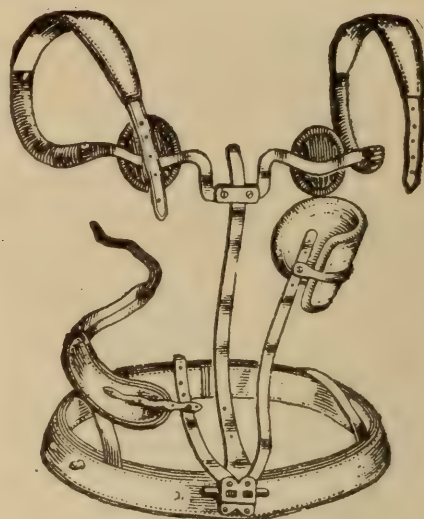

ORTHOPEDIC APPARATUS

H-295

H-305

H-315

SPINE BRACES

H-295 Johnston's Spinal Support, for Anterior Curvature. Price from \$20.00 to..\$30.00

Attached to a well-padded pelvic band is an upright steel bar to which is fastened by an adjustable arm, pads for the scapulae. This adjustable arm terminates in well-padded crutch horns fitted accurately under the axilla to relieve the weight of the body, the straps passing over the shoulder, continuing diagonally across the back, and buttoning on the scapular pad of that side. On the upright steel bar three or more steel springs, well tempered, are fastened. These springs are so shaped that they act as strong levers. The broad abdominal band is made of satteen jean, interlaced with some elastic material and buckled by straps to these springs.

MEASUREMENTS REQUIRED

1, Patient's sex, age and weight. 2, Distance from vertebrae prominens to sacro lumbar articulation. 3, Distance from axilla to crest of ilium, right side. 4, Distance from axilla to crest of ilium, left side. 5, Distance from center of right to center of left scapula. 6, Circumference of waist. 7, Circumference of chest under axilla. 8, Circumference of pelvis 1 inch below crest of ilium. 9, Circumference of arm under axilla and around shoulder. 10, Place a flexible strip of metal along the spine, moulding it exactly to its curves from the seventh cervical vertebra to the middle of the sacrum. With this as a pattern, trace carefully the curve obtained upon a sheet of paper, marking upon it location of following points: Upper and lower borders of the scapulae, crest of ilium and affected parts of the spine. Send us this tracing.

H-305 Improved Brace for Lateral Curvature. Price, \$25.00 to.....\$35.00

To the pelvic belt are attached, laterally, two elastic crutches, so as to relieve the spine of the weight of the trunk. Posteriorly, a single, strong, upright bar, holding a couple of adjustable pads for the scapula, and just below, a leather band, of proper width, terminating in strong India-rubber webbings. This band is passed around the protuberance obliquely, and buckled to the pelvic belt in front, an inch or two beyond the linea alba.

H-315 Lever Brace for Lateral Curvature. Price.....\$45.00

This apparatus consists of a well padded steel pelvic band, to the posterior center of which is attached an upright steel bar, its curves conforming to those of the spine, and holding at its upper extremity upon an adjustable cross-piece two oval pads, resting upon the shoulder blades when the brace is applied.

Attached to the ends of the adjustable cross-piece, are padded crescent-shaped crutches, terminating in padded shoulder straps which fasten on buttons, placed upon the oval shoulder blade pads.

To the posterior center of the pelvic band is attached also a metal box, containing two archimedian screws which move with the aid of the key so as to exert and maintain any amount of pressure against the protuberances.

MEASUREMENTS REQUIRED

1, Patient's name(or sex). 2, Patient's age. 3, Patient's weight (estimated). 4, Distance from sacro lumbar articulation to vertebra prominens. 5, Distance from sacro lumbar articulation to first vertebra involved. 6, Distance from sacro lumbar articulation to last vertebra involved. 7, Distance from crest of ilium to axilla, right side. 8, Distance from crest of ilium to axilla, left side. 9, Distance from the center of one scapula to the center of the other. 10, Horizontal (transverse) diameter of the protuberance. 11, Circumference of chest under axillae. 12, Circumference of pelvis one inch below the iliac crests.

In addition to the above measures, please state if the convexity of the curve is to the right or left side.

H-320

H-320

H-325

BRACES FOR LATERAL CURVATURE

H-320 The Beely Spinal Corset. Price, \$50.00 to.....\$75.00

This appliance was devised by Dr. F. Beely, of Berlin, Germany, and is used by him with excellent results. Its use has been very satisfactory where the surgeon has succeeded in having the corset properly made and accurately fitted to patient. It can be used in the treatment of either scoliosis or kyphosis, though Dr. Beely recommends it particularly for the former deformity. It is made over a cast of the patient, which should be made while the patient is suspended, or it is fitted to the patient himself, where convenient. The appliance is made of strong cloth and spring steel work, except the pelvic portion, where the steel should be malleable. It is made to lace front and back, admitting of easy removal or application. Axillary crutches support the trunk, and the careful fitting over the hips gives a good foundation to a proper corrective force. If the patient cannot come to our establishment for a fitting, a plaster mould of the body, made in the usual way (it must come low down over the pelvis), must be sent to us carefully boxed, with such particulars of the case as will aid us in the construction of the corset.

H-325 The Vienna Extension Corset Brace, for Lateral and Posterior Curvatures. Price, \$35.00 to.....\$50.00

This corset is made of strong white cloth, reinforced with whalebone strips. A steel pelvic band, adjustable over the sacrum, is curved to fit over the crest of ilium, so that the weight of the extension crutches rests on the soft parts. The crutches are adjustable, and may be extended as the growth of the patient or the improvement in the case may require. A broad band of strong elastic webbing carrying a flat pad is attached to one of the side uprights, and passing round the back is attached to the upright on the opposite side. In some cases two of these elastic bands are required, especially when the spine is rotated. In Potts' Disease they are placed in an entirely different position from those shown in the illustration.

A constant elastic pressure is exerted upon the protuberance by this method, which is more effective and less irksome than the screw mechanism and steel pads employed in most of the spinal apparatus now in use. If it is impossible to send the patient to us for fitting, a plaster cast of the body must be sent us, in order to insure a perfect fit and obtain the best results.

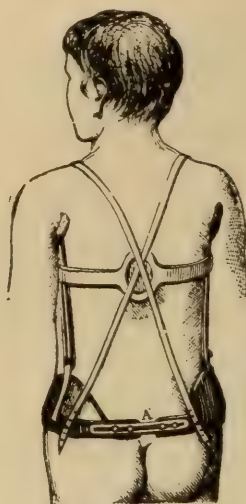

H-330 Sole Leather Jacket, for Lateral Curvatures. Price.....\$25.00
***H-335 Sole Leather Jacket, with jury mast attachment.....** 35.00

This jacket is made of sole leather, lined with chamois, with well padded crutches under the arm, made to lace with hooks in front. Leather body is perforated for ventilation. These jackets in order to obtain the best results must be made over a plaster cast of the body made from a plaster jacket, put on the patient while suspended. These jackets should be made under our own supervision to insure the best results.

H-355

H-350

H-345

H-340

BRACES FOR POSTERIOR CURVATURES

H-340 Improved Brace for Potts' Disease. Price.....\$35.00

This brace is intended to afford an elastic and gentle pressure to the parts to which it is applied, giving to the patient an easy and comfortable feeling. It is made of light tempered springs, and softly padded wherever it comes in contact with the body.

The belt below passes around the pelvis, and the principal weight is thrown upon the gluteal region. Two upright parallel bars pass on each side of the posterior elevation, having a portion of silk elastic rubber between them, for the purpose of preventing further curvature. If the latter is inflamed, a portion cut out of the elastic material prevents direct pressure upon the extremity of the bone. Upon these side bars are attached two elliptic and padded springs, yielding to every pressure, adapting themselves to the spinal column, and keeping the body in an erect position. The two padded crutches are elastic and elevate the body, pressing mostly under the margin of the scapula.

H-345 Washburn's Spinal Brace for Potts' Disease. Price, \$15.00 to.....\$20.00

In the accompanying figure a band of steel, which passes half way around the pelvis just above the trochanters; two flat bands of steel parallel to each other, and curved upon their flattened sides to the form of the patient. These bars are curved a little less than the spine, so that when secured in position, their elasticity will operate to rectify the spinal curve. The cross-bar at the upper ends of the parallel ones is firmly riveted to them, and crosses the back just above the spines of the scapulae. At the ends of this bar are affixed buckles which receive the shoulder straps. Buckles are attached to various parts of the brace by means of which it is secured to the front part of the apparatus, which consists of a piece of strong material covering the chest and abdomen.

H-350 Lannelongue's Spinal Brace for Pott's Disease. Price, \$20.00 to.....\$25.00

This brace consists of a well padded pelvic band, with slide adjustment over sacrum, two adjustable crutches extending from the crest of ilium to the axillae, well padded caps, fitting over the crest, straps passing from shoulder crutches in front and fastened to the pelvic band behind, these straps exerting pressure upon a fenestrated horizontal band, passing over the vertebrae prominens, and attached to the crutch up-rights.

H-355 Taylor's Spinal Brace for Pott's Disease. Price, \$20.00 to.....\$30.00

Consists of a semi-pelvic band well padded, two steel spinal uprights, fitting on each side of the spinous processes, two horizontal steel bars, crossing the uprights at the scapulae, and two well padded curved steel pieces attached to the uprights, fitted to embrace the neck firmly, two shoulder straps fastened to these curved pieces passing over the shoulders, under the axillae and buckling to the upper horizontal bar. Two pads made either of leather filled with cork or curled hair, or of hard rubber are adjusted to the uprights and fitted on each side of the vertebrae prominens. An apron in front is attached to the lower horizontal bar and pelvic band to sustain the abdomen and exert pressure.

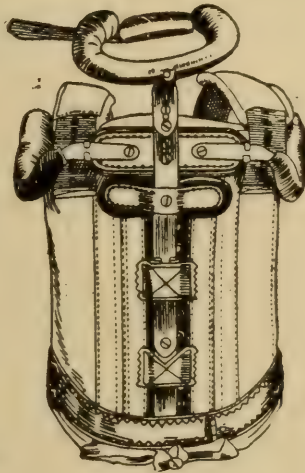

DIRECTIONS FOR MEASUREMENTS

1. Style of brace wanted.
2. Patient's name (or sex).
3. Patient's age.
4. Patient's weight (estimated).
5. Distance from sacro lumbar articulation to vertebra prominens, inches.
6. Distance from sacro lumbar articulation to first vertebra involved, inches.
7. Distance from sacro lumbar articulation to last vertebra involved, inches.
8. Distance from crest of ilium to axilla, right side, inches.
9. Distance from crest of ilium to axilla, left side, inches.
10. Distance from the center of one scapula to the center of the other, inches.
11. Horizontal (transverse) diameter of the protuberance, inches.
12. Circumference of chest under axilla, inches.
13. Circumference of pelvis one inch below the iliac crests, inches.

H-365

H-365

H-370

BRACES FOR POSTERIOR CURVATURES

H-360 Taylor's Brace for Posterior Curvature, with attachment for diseased cervical region. Price, \$30.00 to.....\$50.00

This brace is of the same construction as H-355, with the addition of the chin piece as shown. This attachment can be adjusted in such a manner as to take the weight of the head from the diseased vertebrae.

H-365 Mueller's Corset Brace, for Posterior Curvature, with attachment for diseased cervical region. Price, \$30.00 to.....\$50.00

This is without doubt the most practical brace for this trouble that it made. It consists of a well padded pelvic band, curving over the crest of the ilium to obtain the best bearing surface with the most comfort, a spinal upright to which is attached a pad pressing on each side of the vertebrae prominens, a pad crossing the scapulae, to which is attached arm crutches, well padded and fitted with should straps as shown. A corset fitting the body closely is worn on the inside of the apparatus. A head piece well padded is attached as shown.

DIRECTIONS FOR MEASUREMENTS.

1. Sex of patient.
2. General appearance of patient.
3. Lay a soft piece of lead-wire along the back, moulding it exactly to the spine, from the seventh cervical vertebra to the middle of the sacrum. With this pattern trace carefully the shape of the spine on a sheet of paper, marking the points opposite the upper and lower borders of the scapula and the crest of the ilium.
4. Circumference of body between crest of ilium and trochanter major.
5. Circumference of body at waist.
6. Circumference of body at axillae.
7. Distance between the upper borders of the scapulae.
8. Distance between the lower borders of the scapulae.
9. Distance, if any, from top of brace to vertebra prominens.
10. Distance from same point to base of skull.
11. Circumference of head and chin.
12. Lateral diameter of head close under ears.
13. Antero-posterior diameter from chin to back of neck.
14. Take a piece of bar lead and get outline of back and neck, and show same on paper.

H-370 Sayre's Jury Mast, for incorporation in a plaster jacket. Price.....\$12.00

This consists of two pieces of malleable iron, bent to fit the curve of the back. To the lower portion are attached three or more roughened tin strips, long enough to go nearly around the body. From two cross pieces of the upper extremity springs a central shaft, carried in a curve over the head and capable of being elongated at will. To this is attached at its upper extremity a swivel cross bar with hooks, from which depend straps supporting a head and chin collar.

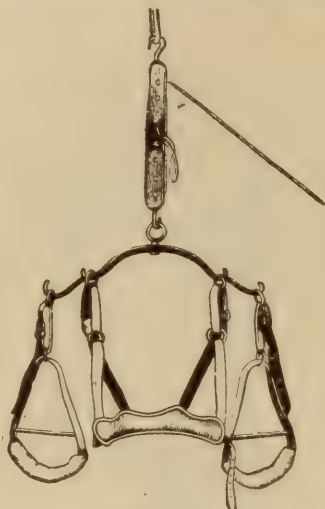

DIRECTIONS FOR MEASUREMENTS

1. Bend a flexible strip of lead to the contour of the back, commencing at the top of the head, and carefully carry it along to the sacrum; carefully remove and trace on paper, marking the position of the scapulae, iliac crests and point of disease.
2. Give circumference top of head, around chin.
3. Circumference around cranium.
4. Circumference of pelvis, one inch below iliac crests.

H-380

TORTICOLLIS AND SUSPENSION APPARATUS

H-375 Markoe's Apparatus for Torticollis. Price, \$35.00 to.....\$45.00

"This apparatus is constructed in the following manner: An upright steel bar is pasted to a pelvic band, and carried along the spine to a little below the level of the shoulders, secured in position by straps passing forward over the shoulders, backward under the axillae, and fastened to buttons or pads situated over the scapulae.

"A steel lever for extension of the neck is provided inferiorly with a slot, to admit of adjustment, and connected with the upright bar by means of two screws; the top of this lever is made to form a powerful clamp, for the purpose of holding the head-band and of securing the head in position. The head-band is formed of a steel-spring, carried half around the back of the head, softly padded, the covering extended to the front and buckled there. A strap may also be passed across the top of the head from ear to ear.

"A bandage, the size and shape of the patient's chin, is buttoned to this hand-band laterally with four straps. Fastened to the steel spring of the head-band is a steel stem about one inch or less in length, terminating in a ball; this is held within the grasp of a clamp, thus forming a universal joint, moving freely in all directions. By turning the thumb-screw with which the clamp is provided, the movement of the joint is arrested and the head of the patient may thus be fixed in any position."

DIRECTIONS FOR MEASUREMENTS

1. Patient's name (or sex).
2. Patient's age.
3. Patient's weight.
4. Circumference of body under axilla, inches.
5. Distance from sacro-lumbar articulation of the spine to the vertebra prominens, inches.
6. Distance from the same point to the base of the skull, inches.
7. Distance from crest of ilium to axilla, each side, inches.
8. Circumference of the head at the base of the skull over the ears and upper line of the forehead, inches.

H-380 Robert's Apparatus for Torticollis. Price.....\$25.00

This apparatus is designed to secure, at the seat of disease, continuous elastic vertebral extension and voluntary articular motion, together with the avoidance of inter articular pressure and friction. It consists essentially of two encasements, an upper or cervico cephalic and a lower or cervico-thrunkal segment. The upper one has a clasp under the chin, which can be opened or closed by means of a key, thus permitting of easy removal or reapplication. The lower one is provided with a hinge posteriorly and a clasp anteriorly. The surfaces pressed upon by these two enveloping segments serve as points for counter pressure. Elastic linear extension of the cervical spine is affected by means of two strong spiral springs playing upon upright steel rods, which are placed on either side of the neck.

MEASUREMENTS REQUIRED

The apparatus requires careful adjustment. This necessitates the patient's presence at our establishment to insure a perfect fit.

- | | | |
|--------|---|---------|
| *H-385 | Sayre's Suspension Apparatus, plain pulleys. Aluminum bronze finish.. | \$ 9.00 |
| H-387 | Sayre's Suspension Apparatus, compound pulleys..... | 12.00 |
| H-388 | Sayre's Suspension Apparatus, nickel plated trimmings..... | 10.50 |

FRACTURES

Of the Hip, Thigh, Patella, Leg, Ankle, Cases of Non-Union, Dislocations, Sprains, Knee or Hip Joint Diseases Treated with the Patented

AMBULATORY PNEUMATIC SPLINT

Result in Bone Union Without Shortening or Deformity.

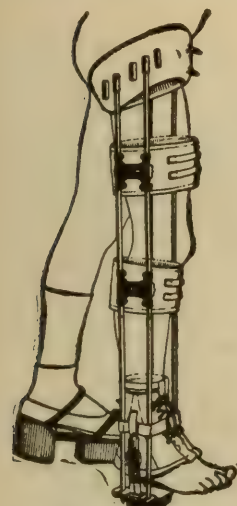

Recommended, Ordered and Used by Best Surgeons Everywhere.

Every Progressive Physician and Surgeon should recommend it to his patients in need of this modern splint. They would gladly pay for its rental if they but knew of its many advantages in the treatment of their case. To apply patient is not put to sleep or pain caused. It does away with fracture box, improvised splints, weights, pulleys, lying in one position in bed, and plaster casts.

It may be put on at time of injury and fracture reduced with it or it may be put on later, but in most cases the sooner the better. Its use prevents hypostatic congestion of lungs and heart by having patient's bed raised a foot or more. It permits of rolling patient onto splint side for bathing and rubbing of back and hips, to prevent bed sores, and when ready to get patient out of bed, the splint is a safe, comfortable walking support for the limb, thereby increasing general strength and health of patient while union is taking place.

The adjustment is simple, easily made for right or left limb of male or female patient for all of the various purposes for which the splint is used and when supplied with measurements, we send it fitted, ready to apply with all parts tagged with printed directions. Guaranteed to be satisfactory to you in every respect.

It is an open dressing permitting of Frequent Inspection, Bathing, Dressings to injuries of soft tissues, Ventilations, Massage and Early Painless Use of the Limb with Perfect Safety.

It is easily applied without pain and allows the patient to move around in bed, sit up or walk about at once, gradually prolonging the period of activity each day until recovery is complete.

It reduces the reduction of fractures and dislocations to a comparatively easy, safe, accurate and reliable setting, retaining the fractured bones in their proper position.

It permits the application (if desired) of supporting posterior, lateral, or anterior padded clothboard apposition splint for Hip, Thigh or Leg Fracture. A full set of which are furnished with each splint, also leather buckling straps for adhesive strap extension in connection with the pneumatic cushion extension and counter extension on and between the bony prominences of the ankle and foot and tuberosity of the ischium.

It is far superior to any other form of appliance or method of dressing, as with it patients are the most comfortable, able to walk about, eat and sleep better, are stronger and convalesce with "no ill after effects" in the most rapid manner possible—thereby shortening the period of disability from business or work in no case less than one-third and in many cases one-half of the time that would be required without the use of this splint.

It carries out all of the surgical and mechanical principles: Extension and Counter-Extension on and between bony prominences, both above and below the injury; Immobilization; Maintenance of a Free Circulation; Gradual Daily Extension until subsidence of inflammatory exudate is complete and satisfactory continuity has been secured; Inspection; Judicious Exercise; Dressings as Indicated; Traction—Lateral; Anterior and Posterior, as required for perfect approximation; Massage; Ventilation; Bathing, etc.

It aids you in preventing shortening, deformity, non-union of bone, malpractice suits and pays for itself by increasing any doctor's practice and reputation for best results.

It is made and finished in a first-class manner of the very best quality of cold hard drawn, light seamless brass tubes (non-rustable) with adjustable extension screws and cushions of durable webbing covered with flannel containing pure gum rubber pneumatic cushions with adjustable air valves.

It is made in two sizes—adult's and child's. It may be applied to either limb and adjusted to patients of various sizes. It will give perfect satisfaction to patient and surgeon; will wear for years and being washable may be applied in a clean condition any number of times for the various purposes for which it is used.

Rental to Patients, \$30.00

Includes two months' or less use of the appliance, surgical dressings and express charges prepaid to any point in the United States,

ON RENTAL ORDERS. On return of splint to us at end of rental period, we refund \$5.00 on each rental. If desired, the rental may be applied on the purchase. Prices on request.

In Ordering, please state: Splint to be adjusted for right or left limb? Shoe for male or female? Distance from sole of foot to perineum? Circumference of thigh at perineum? If for Femur or Hip Fracture or case of Hip-Joint Disease? State also Circumference of Hips? Of Chest? Distance from sole of foot to axilla? Express to whom? Purchase or rental order? Name and address of doctor.

AMBULATORY PNEUMATIC SPLINT MFG. CO.

APPARATUS FOR FRACTURES AND DISLOCATIONS

H-400. THE WIENER-MUELLER SPLINT NO. 1

Price of Apparatus for use in ununited fracture, \$25.00 to.....\$35.00
 Price of Apparatus for use in tubercular cases, including cork extension shoe for well leg, \$35.00 to..... 45.00

H-400

This apparatus is designed for treatment of tubercular knee or ankle joint, also in cases of ununited fractures. It consists of a strong steel frame reaching from the tuber-ichia to the floor, about $1\frac{1}{2}$ inches below the sole of the foot. The perineal or top ring is well padded and the entire weight is transferred from this point to the floor. Wide, padded leather bands above and below the knee are fitted snugly to the limb to hold the brace in position. Extension is obtained by means of straps fastened to the steel sole of the brace; this sole in connection with the perineal band, bearing the entire weight of the patient, and permitting him to walk without danger of disturbing the diseased limb. A cork extension shoe, having an elevation of $1\frac{1}{2}$ inches, is worn on well foot in order to raise it to the length of the brace.

When used in cases of ununited fractures the brace is fastened direct to shoe, the cork extension and steel sole not being necessary. In order to obtain the best results we require a plaster cast of the limb, together with measurements indicated below.

1. Age, sex, weight and general condition of patient.
2. Length from sole of foot to ankle joint, inner side of leg.
3. Length from sole of foot to knee joint, inner side of leg.
4. Length from sole of foot to perineum, inner side of leg.
5. Length from sole of foot to trochanter major, outer side of leg.
6. Circumference of ankle joint.
7. Circumference above ankle joint.
8. Circumference largest swelling of calf.
9. Circumference garter (below the knee).
10. Circumference above knee (lower third).
11. Circumference of thigh (middle third).
12. Circumference of thigh at perineum.

*H-410 STROHMEYER'S APPARATUS FOR ANCHYLOSIS OF THE ELBOW JOINT. Price, \$18 to \$22.50

This apparatus is for the gradual extension of contracted muscles. By persistent and daily passive and active exercise, a flexible and useful joint may be restored. It may also be used for forcible breaking up of false ankylosis, if the surgeon prefers this to gradual extension. It forms also a safeguard against malposition, for should it be deemed impossible to effect a cure, the arm may be fixed in such a position to ankylose as shall give it the greatest usefulness.

DIRECTIONS FOR MEASUREMENT.

1. Strohmeier's Elbow Splint.
2. Right or left arm?
3. Length from wrist to elbow joint (N to R).....Inches
4. Length from wrist to axilla (N to W).....Inches
5. Circumference of wrist (N).....Inches
6. Circumference of forearm (S).....Inches
7. Circumference of elbow joint (R).....Inches
8. Circumference of arm (Q).....Inches

H-415

H-415 Strohmeier's Apparatus for Ankylosis of the Knee Joint. Price, \$20.00 to \$30.00

This apparatus is for overcoming muscular contractions of the knee joint and for favoring the re-establishment of motion in cases of false ankylosis.

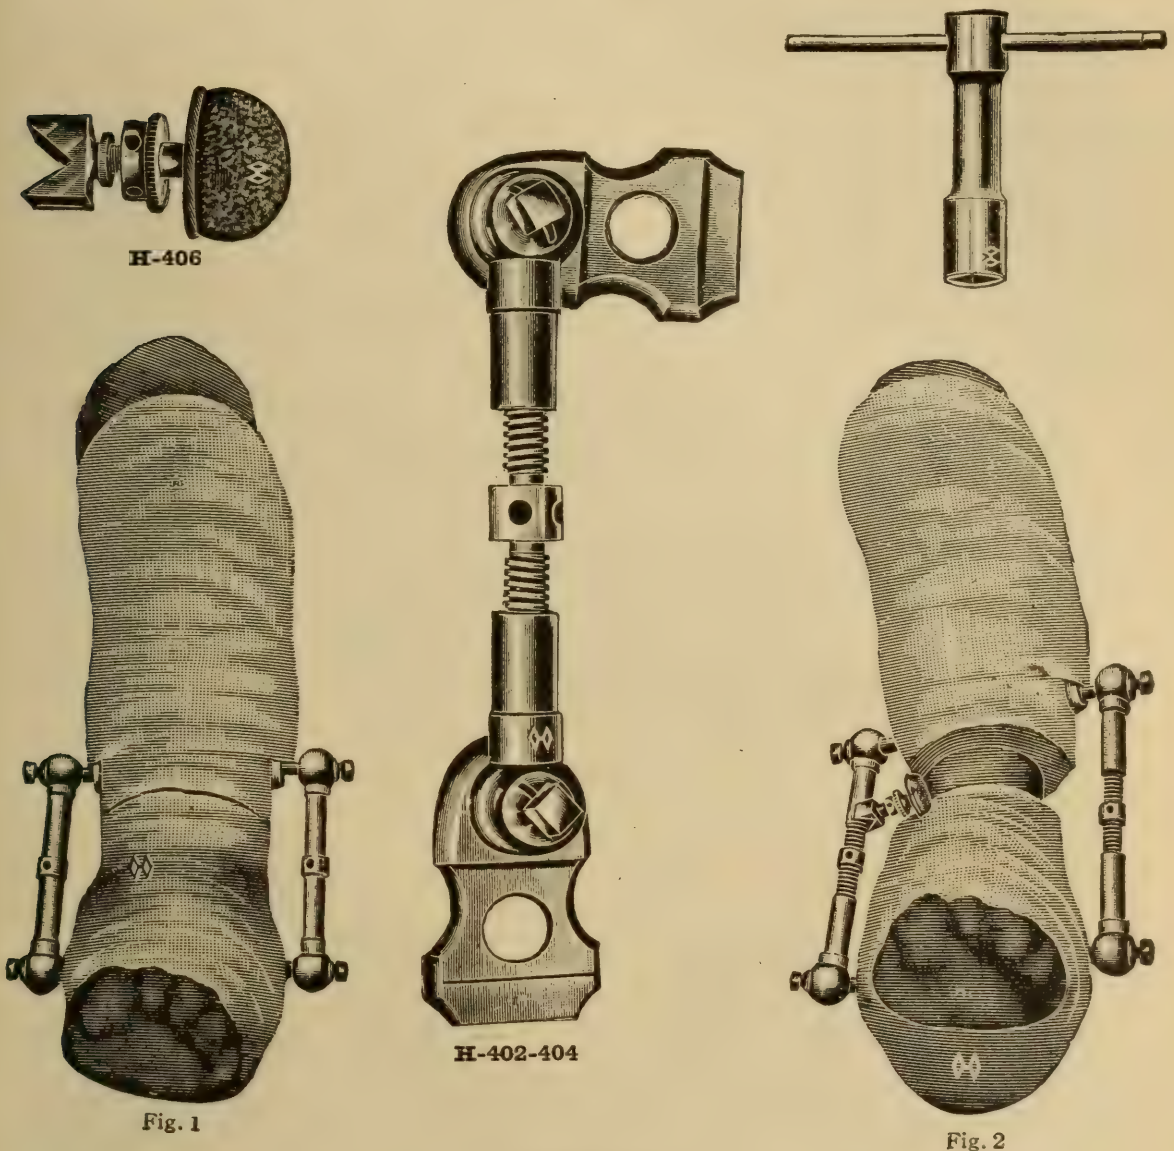

It consists of metal troughs, for the reception of the thigh and leg, united by two lateral shafts, provided with joint at the knee. A knee cap, adjusted to buttons on the lateral shafts, with strong elastic straps, exerts pressure on the patella, whilst the instrument may be flexed and extended by means of a set screw.

By persistent and daily passive exercise a flexible and pliable joint may be restored without confining the patient to bed or room. The mechanism is powerful and may be moved swiftly, adapting it to the forcible breaking up of adhesion as well, should the surgeon prefer this to gradual extension.

DIRECTIONS FOR MEASUREMENTS

1. Circumference above knee, inches.
2. Circumference at knee, inches.
3. Circumference below knee, inches.
4. Circumference above ankle, inches.
5. Length from ankle to knee, inches.
6. Length from knee to upper third of thigh, inches.

APPARATUS FOR FRACTURES AND DISLOCATIONS

SPLINTS

H-402	Hackenbruch's Fracture Clamp, large size, for the femur.....	\$12.00
H-403	Hackenbruch's Fracture Clamp, medium size, for the humerus.....	12.00
H-404	Hackenbruch's Fracture Clamp, small size, for the forearm and for children	12.00
		Each
H-406	Hackenbruch's Pelotte, for bringing fragments in accurate apposition...	1.50
*H-407	Hackenbruch's "Factis" Pad, large, 20x3 inches.....	1.50
*H-408	Hackenbruch's "Factis" Pad, medium, 16x3 inches.....	1.25
*H-409	Hackenbruch's "Factis" Pad, small, 14x3 inches.....	1.25

Hackenbruch's Fracture Clamps are always used in sets of 2, consisting of 2 fastening wings, which are imbedded on both sides of the fractured limb by means of a plaster of paris bandage. The sleeves are forced apart by means of an expanding turn-buckle and thereby bring the fragments in apposition. The wings are attached to the sleeves by means of ball and socket joints, which can be brought to a fixed position by means of set screws.

Plaster of paris bandages are applied around the fracture limb, which has been padded underneath by "Factis" material, as shown in Fig. 1. As soon as this has properly hardened the cast is cut through in a circular way, in the plane of the fracture. By means of the expanding turn-buckle the fragments can be brought into proper apposition, as shown in Fig. 2.

In very difficult cases proper apposition can be facilitated by means of the Hackenbruch's Pelotte which consists of a screw with forked attachments. The cushion is placed against the fragments to be shifted, and the fork attachment against the sleeve of the clamp. By turning the screw a firm lateral pressure is applied and the fragment driven in the desired direction.

Full descriptive pamphlet upon application.

DR. CHARLES GEIGER'S ORTHOPEDIC AND FRACTURE EXTENSION DEVICE

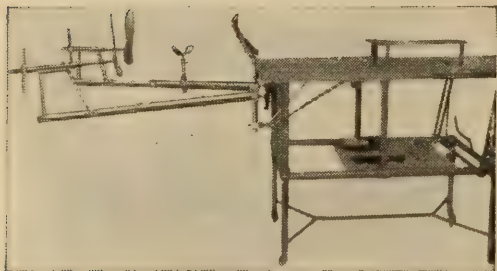

Exhibit A

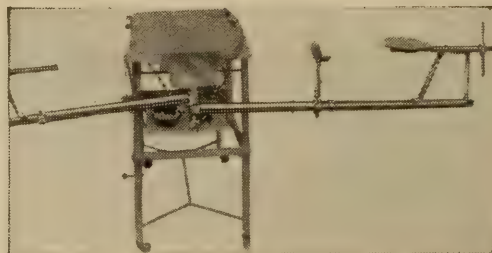

Exhibit C

Exhibit B

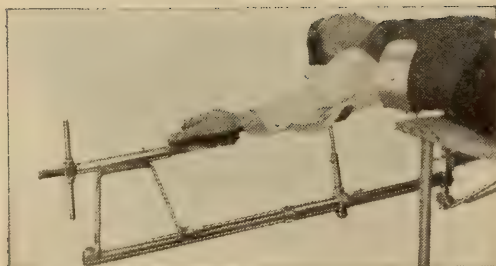

Exhibit D

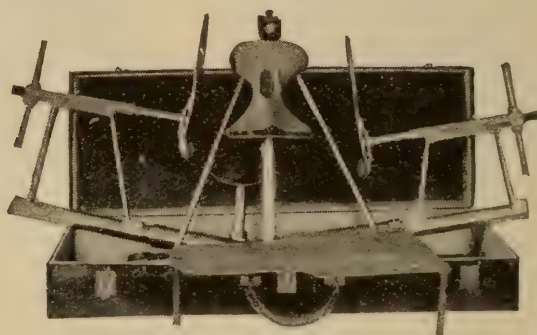

Exhibit E

This extension device makes orthopedic and fracture work easy for the surgeon—gives clearance and removes all obstruction, while applying plaster casts or dressings to hip or back, or any part of the body or limbs.

Perfect and continuous extension can be made on the smallest child as well as the largest man.

The operating table is not in the way while applying dressings to the extremities, as found in all other extension appliances.

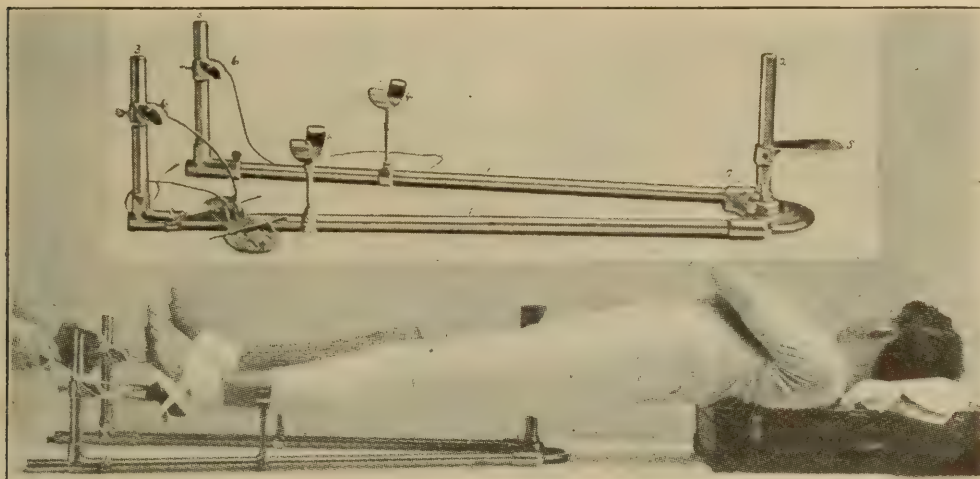

The device is portable and can be attached to any operating table.

PRICE

H-461	Dr. Charles Geiger's Orthopedic or Fracture Extension Device.....	\$93.00
H-462	Carrying Case, for extension device.....	6.00

INFORMATION—For further information, and more complete details, write to Dr. Charles Geiger, St. Joseph, Missouri, U. S. A.

H-463. THE ECHOLS' TRACTION APPARATUS

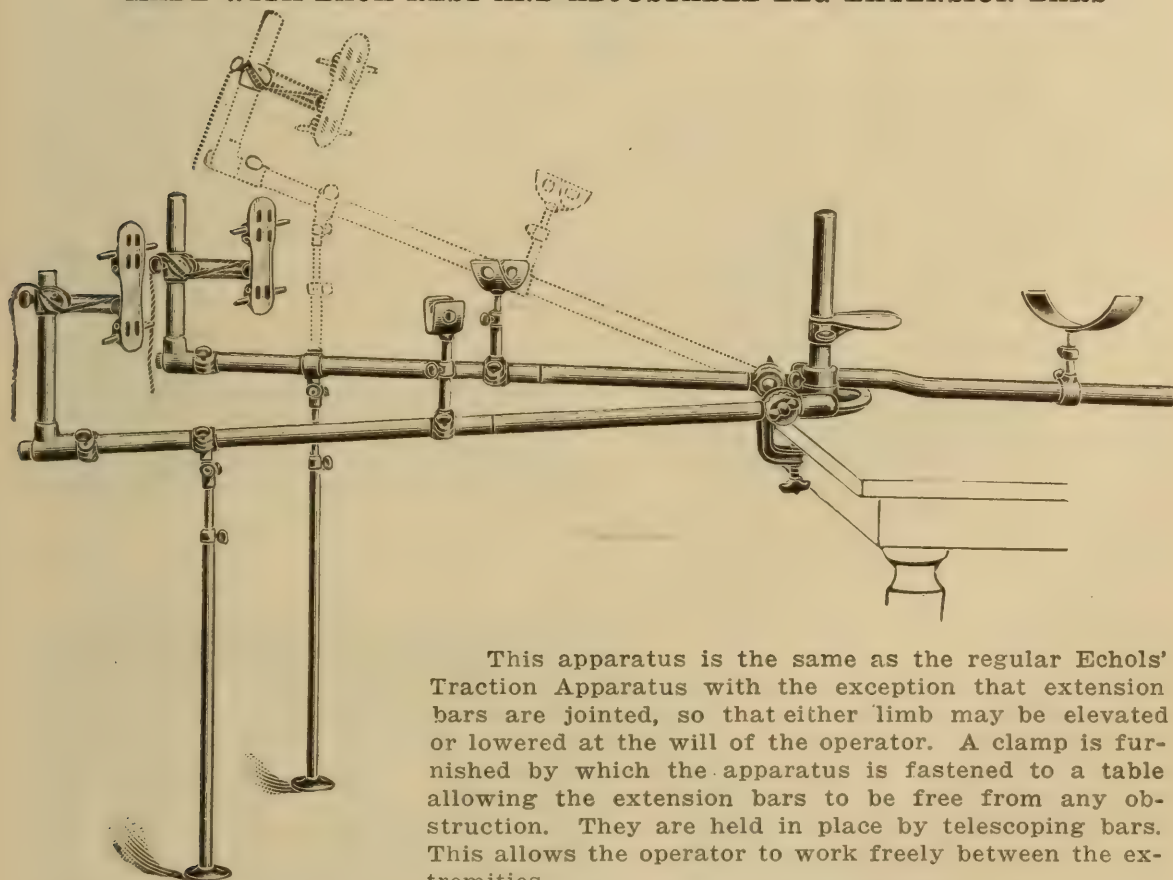

With this apparatus traction and fixation for applying plaster of paris cast for the lower limbs or trunk can be obtained. It is also of the greatest service in fractures and in all open operations upon the long bones of the lower extremities, plaster casts for tubercular hip joints as well as the ambulatory treatment of fractures of the thigh by the plaster of paris cast method.

Price, in carrying case.....\$48.00

H-464. ECHOLS' IMPROVED TRACTION APPARATUS

MADE WITH BACK REST AND ADJUSTABLE LEG EXTENSION BARS

This apparatus is the same as the regular Echols' Traction Apparatus with the exception that extension bars are jointed, so that either limb may be elevated or lowered at the will of the operator. A clamp is furnished by which the apparatus is fastened to a table allowing the extension bars to be free from any obstruction. They are held in place by telescoping bars. This allows the operator to work freely between the extremities.

The back rest shown in the above illustration may be attached to our regular "Echols." It is designed to take the place of the suitcase or other material used to support the back. This back rest is adjustable in height as well as in length.

H-464	Price of complete apparatus, including back rest and adjustable extension bars	\$65.00
H-266	Without back rest	60.00
H-267	Back rest only	8.00

SPLINTS AND SPLINT MATERIAL

H-635 Coaptation Splints, plain, per dozen splints.....\$0.60

These splints are made of thin, firm bass-wood, $\frac{1}{8}$ inch thick, 18 inches long and $3\frac{1}{2}$ inches wide. They are easily cut with a knife or scissors.

*H-640 Coaptation Splints, plain, extra heavy, double the thickness of H-635, per dozen splints\$0.75

H-645 Dressing Splints, kid lined, per set of 5 pieces..... .80

Consist of a set of five sizes. They will be found useful where a firm and strong splint is required. They are lined with kid; are 2 inches wide; length smallest, $5\frac{1}{2}$ inches; longest, $11\frac{1}{2}$ inches, and are split lengthwise at intervals of $\frac{1}{2}$ an inch.

H-650 Coaptation Splints, kid lined, per set of 5 pieces.....\$1.25

These are similar to splints Fig. H-645, and can be used in the same way. They have round ends and graduate in width from large end to small. Length longest, 15 in.; shortest, 7 in.

*H-655 Coaptation Splints, flannel lined. Price, per dozen splints.....\$0.85

These splints are of the same size and shape as Fig. H-645, but are lined with canton flannel, giving them a smooth, soft surface.

H-660 Split Roller Splints, 3"x5', \$0.45; 5"x5', \$0.75; 8"x5'.....\$0.90

These splints are made of thin, firm wood, lined with canton flannel. They combine the firmness and strength of the ordinary splint with the pliability of a bandage.

The No. refers to thickness.

ELASTIC HOSIERY

Elastic goods made to order cannot be exchanged or returned for credit, although slight alterations may be made.

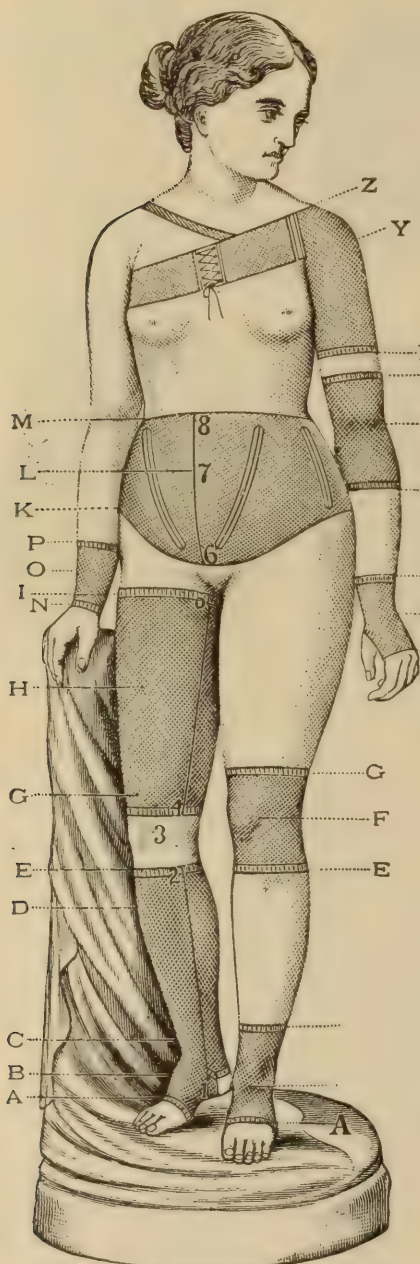

We guarantee that the workmanship and materials are the best available.

For measures take exact circumference in inches at points indicated by letters. We allow for compression. Measurements should be taken in the morning before the limb has swollen.

Length measures must be taken on the inside of limb.

Do not give the measurements of the well limb expecting the piece to fit the affected part.

While the value of Surgical Hosiery depends largely on the quality and freshness of the rubber, accuracy of fit is of the highest importance; care should therefore be taken to follow explicitly our directions for measurement. Send for measurement blanks.

DIRECTIONS FOR SPECIAL MEASUREMENTS

Thigh Stockings, circumferences at A, B, C, D, E, F, G, H, I; length from floor to F and F to I.

Thigh Legging, circumferences at C, D, E, F, G, H, I; lengths from C to F and F to I.

Thigh Knee Cap, circumferences at E, F, G, H, I, length, E to F and F to I.

Thigh Piece, circumferences at G, H, I; length, G to I.

Knee Stockings, circumferences at A, B, C, D, E, F, G; lengths, floor to F and F to G.

Knee Leggings, circumferences at C, D, E, F, G; lengths, C to F and F to G.

Knee Caps, circumferences at E, F, G; length, F to G.

Garter Stockings, circumferences at A, B, C, D, E; length, floor to E.

Garter Leggings, circumferences at C, D, E; length, C to E.

Anklets, circumferences at A, B, C; length, floor to C.

Shoulder Cap, Z, or around form and under one arm as indicated; **Y**, or around arm at top; **Y**, also around arm and body to opposite side; **X**, or around arm a little below **Y**, and give also length measures **X** to **Y** and **Y** to **Z** and **X** to arm-pit. If for right or left shoulder.

Elbow Cap, circumferences at U, V, W; length, U to W.

Wristlet, circumference at N, O, P; length, N to P.

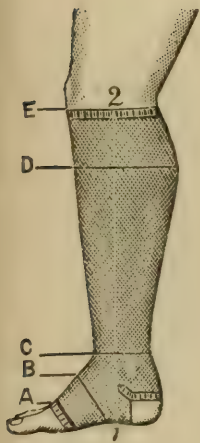

Mitten, T, or around top; **S**, or around wrist; **R**, or around hand, including thumb, and also separate measure around the forefingers back of knuckles; also inches around thumb, if thumb piece is wanted, but the mitt is better without the thumb unless compression of the thumb is necessary. Length, **R** to **S** and **S** to **T**. If for right or left hand.

Abdominal Supporters, circumferences at K, L and M; length, 6 to 7, 7 to 8.

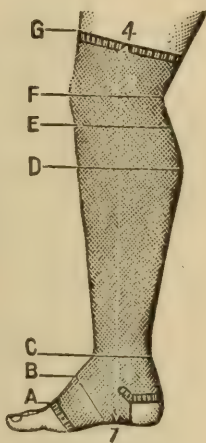

WE CAN LACE PIECES FOR YOU

We lace stockings of any length to order only, and laces should be used where the conditions of the limb will not permit of the drawing on of a solid piece, where ankle is too small to permit the piece to be drawn over the heel without over-straining, or where there is over-much swelling to be reduced. State if for right or left limb, as we lace on inner side when condition of limb will permit.

For laced stocking add to above prices as follows:

Garter Leggings, full laced, each, \$1.20; half laced, each, \$0.60.

Garter Leggings, full laced, each, \$1.60; half laced, each, \$0.80.

Knee Stockings, full laced, each, \$2.00; half laced, each, \$1.00.

Thigh Stockings, full laced, each, \$3.00; half laced, each, \$1.50.

Knee Caps, full laced, each, \$0.80.

SUNDRY APPARATUS

H-2005-2010

H-2003

H-2000

The three devices illustrated will be found peculiarly adapted to the uses for which they were designed. They are practical, will give results, are light, well ventilated, easily applied and very comfortable.

- H-2000 Haslam's Apparatus, to correct and prevent projecting ears.....\$1.50
 Made in three sizes: No. 1, small; No. 2, medium; No. 3, large.
- H-2004 Sterling Ear Retainer, to correct and prevent projecting ears..... 1.50
 Made in three sizes: No. 1, small; No. 2, medium; No. 3, large.
- H-2005 French's Device, to prevent mouth breathing during sleep, No. 1, adult's.. 1.00
- H-2010 French's Device, to prevent mouth breathing during sleep, No. 2, child's.. 1.00

ELASTIC BANDAGES

H-858. BENDER'S IDEAL BANDAGE

This new elastic bandage is made entirely of cotton. Its elasticity is due to the peculiar weave of the individual threads. It can be rolled evenly, and reversing is unnecessary.

The continual and even pressure given by the "Ideal" Bandage makes it desirable for use in all cases where a rubber or flannel bandage would be indicated. For the treatment of varicose veins and ulcers, as an abdominal bandage in pregnancy, and for bandaging limbs and joints, it is superior to any other bandage made. It is of signal value in building up the stump after amputation. Being porous, it allows perspiration to evaporate freely, thus insuring a natural condition of the skin.

The "Ideal" Bandage may be washed freely, as washing adds to its elasticity.

Bender's Ideal Bandages, in rolls of 3½ yards (stretching to 5½ yards), 8 widths, from 1½ to 8 inches. Each roll in individual dust-proof wrapper bearing Blue Cross Trade Mark:

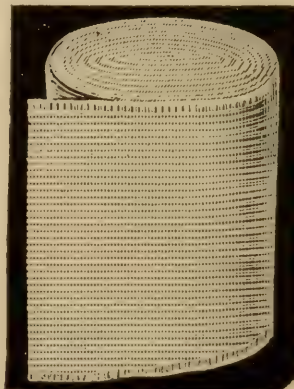

No. and size.....	36/1½	36/2	36/2½	36/3	36/3½
Price, per doz....	\$3.60	\$4.50	\$6.00	\$7.20	\$8.40
Price, each.....	.40	.45	.60	.70	.80
No. and size.....	36/4	36/5	36/6½	36/8	
Price, per doz.....	\$9.00	\$10.50	\$12.75	\$16.00	
Price, each.....	.85	1.00	1.15	1.50	

H-859. VIM ELASTIC BANDAGES

Vim Bandage Elastic has the longest stretch of any smooth, uncovered rubber bandage. A uniformly well-made elastic.

Made in 2, 2½ and 3-inch widths.

H-751	2	in. x 3 yds., stretched.....	\$0.50
H-751A	2½	in. x 3 yds., stretched.....	.60
H-751B	3	in. x 3 yds., stretched.....	.75
H-751C	2	in. x 5 yds., stretched.....	.65

H-751E	3	in. x 5 yds., stretched.....	1.00

H892 "AMBUMATIC" WASHABLE ABDOMINAL SUPPORTERS (Patented)

Are Worthy of a Doctor's Recommendation.

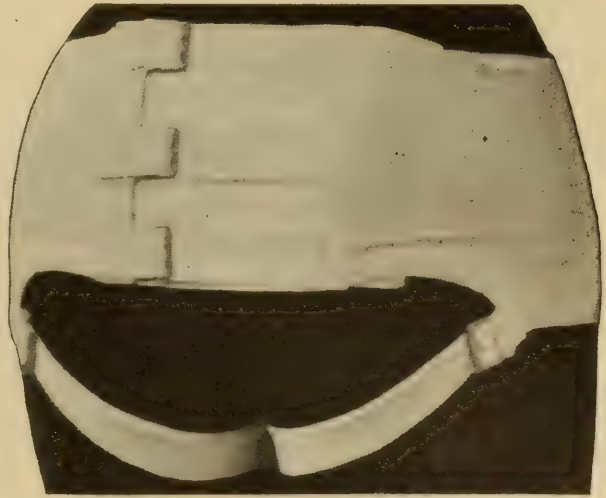

Use Them Once and You'll Continue to Do So.

"There's a Reason."

Front View

Patented. Shows front view "Ambumatic" Supporter. Notice adjustment for any degree of Uplift or Binder Support to any part of the abdomen.

Back View

Patented. Shows back view of "Ambumatic" Supporter. Notice adjustment for keeping the Belt in Place.

"Ambumatic" Washable Abdominal Supporters are made to order to fit individual requirements of each patient. They are ideal for all purposes, for all persons requiring special of general support before or after operations.

They Fit Perfectly Across the Back and Hips without wrinkling, slipping out of place, cutting of thighs or back or interfering with a corset. They embody the best surgical thought of the day on correct and scientific support.

They are Light, Flexible and Washable as form-fitting underwear. No leather or rubber elastic is used. They are made to lace for women and children, to buckle for men (unless otherwise ordered) and are kept in place by the lower portion of the supporter encircling each thigh. To the woman's belt a front and back tab is attached for sanitary pad—also garter tabs if ordered.

The Web Front Is so Made as to thoroughly support the area of the operation, rupture or special conditions for which the belt is to be worn. The "Lift-Up" adjustment provides for special pressure as a "Binder" to the lower, middle or upper portion of the abdomen.

They Are Used for Pregnancy, Obesity, Hernia, Relaxed Sacroliac Articulations, Floating Kidneys, Ptosis, Pertussis, High and Low Operations, and are recommended by every surgeon who has ever prescribed them.

To Order, State: Circumference around waist, middle and lower abdomen; height of belt in front and circumference around one thigh at the perineum; also the location and length of incision or rupture or condition for which the belt is to be worn, and whether for man, woman, child or baby. Also state kind of material, price and style of supporter wanted, name and address of patient and of doctor ordering.

PRICES OF "AMBUMATIC" WASHABLE ABDOMINAL SUPPORTERS

Made in Cotton, \$6.00; Cotton Mesh or Half Silk, \$8.00; Linen Mesh, \$10.00 and \$12.00; Silk.....\$15.00

If made without the Adjustable Binder deduct \$1.00 from above prices, or if made with two pairs of Removable Thigh Straps, add \$1.00 to above prices.

For Persons That Measure more than 40 inches in circumference or require their supporter higher than 12 inches in front, an additional charge is made of \$0.25 per inch.

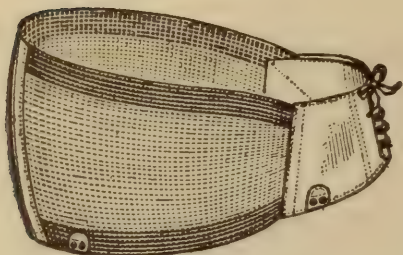

When Quality of Material and Price Is Not Given, linen mesh will be supplied, which is the most absorbent, sanitary, coolest and strongest to wear, giving efficient support as an "Up Lift" or Binder and is the one we recommend as the best.

It will pay to keep supplied with our order blanks. Write today.

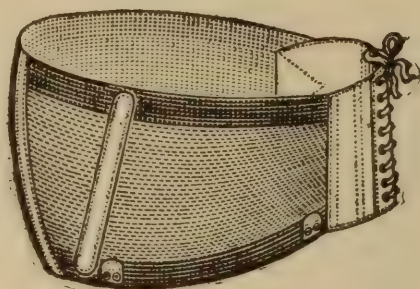

To Physicians and Hospitals a cash discount of 25 per cent is allowed.

Ambulatory Pneumatic Splint Mfg. Co., 30 E. Randolph St., Chicago.

H-965

ABDOMINAL SUPPORTERS

- H-860 Abdominal Supporter, light elastic, mercerized thread, 8-in., \$2.00; 10-in... \$2.50
 H-865 Abdominal Supporter, light elastic, silk thread, 8-in., \$3.50; 10-in..... 4.00
 H-870 Abdominal Supporter, light elastic, mercerized thread, 8-in., \$2.50; 10-in. 3.00
 H-875 Abdominal Supporter, light elastic, silk thread, 8-in., \$4.00; 10 in..... 4.50

Supporters H-860 to H-875 are made of silk and thread covered elastic fabric, hand knit material, with strong edges. This belt is not fashioned, but on account of the softness and pliability of the material will readily conform to the abdomen.

- H-880 Abdominal Supporter, medium elastic, with stays, made to lace in back, thread, 8-in. to 10-in. wide..... \$4.50
 H-885 Abdominal Supporter, medium elastic, with stays, made to lace in back, silk, 8-in. to 10-in. wide..... 6.00
 H-890 Abdominal Supporter, medium elastic, with stays, made to buckle at sides, thread, 8-in. to 10-in. wide..... 4.50
 H-895 Abdominal Supporter, medium elastic, with stays, made to buckle at sides, silk, 8-in. to 10-in. wide..... 6.00

Supporters H-880 to H-895 are made of medium weight elastic material, hand knit, with single welts on edges; fashioned in knitting to conform to the shape of the abdomen; a soft, pliable, ventilated material.

- H-900 Abdominal Supporter, silk center, made to buckle at sides..... 3.50
 H-905 Abdominal Supporter, made to lace in back, thread..... 7.50
 H-910 Abdominal Supporter, made to lace in back, medium silk, \$9.00; heavy silk 10.00
 H-915 Abdominal Supporter, made to buckle at sides, thread..... 7.50
 H-920 Abdominal Supporter, made to buckle at sides, medium silk, \$9.00; heavy silk 10.00

Supporters H-905 to H-920 are made in thread and silk, of medium and heavy weights, entirely of elastic fabric similar to elastic hosiery, but generally of heavier material and with double welts at top and bottom to give firmer support. They are woven of elastic material that ventilates, giving comparative comfort in warm weather.

We consider these supporters the best we make, and recommend them wherever a patient can afford to pay for a first-class article. They are made to buckle at side or to lace in back as ordered.

- H-925 Abdominal Supporter, Teufel's System II..... \$ 7.00
 H-930 Abdominal Supporter, Teufel's System VI, for floating kidney, with 1 pad, \$8.00; with 2 pads..... 9.00
 H-935 Abdominal Supporter, genuine moleskin, \$3.00; best quality..... 5.00
 Adapted for obesity and post-operative work in men.

SPECIAL ABDOMINAL SUPPORTERS

- H-940 Abdominal Supporter, elastic, with pad, for use after operation for appendicitis, thread, \$7.50 to \$12.00; silk, \$10.00 to..... 15.00
 H-945 Abdominal Supporter, elastic, with pad for floating kidney, thread, \$7.50 to \$12.00; silk, \$10.00 to..... 15.00
 H-950 Abdominal Supporter, elastic, with pad to support abdomen after operation, thread, \$7.50 to \$12.00; silk, \$10.00 to..... 15.00
 H-955 Abdominal Supporter, hard rubber covered spring, with hard rubber pad working on ball joints. Indicated where a firm upward pressure is desired, \$8.00 to..... 12.00
 H-960 Abdominal Supporter, elastic, with pad for umbilical hernia, thread, \$10.00 to \$15.00; silk, \$12.00 to..... 20.00
 H-965 Abdominal Supporter, elastic, combined with hard rubber bow umbilical truss, thread, \$10.00 to \$15.00; silk, \$12.00 to..... 20.00

DIRECTIONS FOR ORDERING TRUSSES

1. Circumference of body 2 inches below the iliac crest.
2. Right or left side, or both.
3. Complete or incomplete.
4. Large, medium or small rupture.
5. General condition of patient.
6. Style of truss wanted. (This can be left to us if you are in doubt. When the selection is left with us, we send what we think the case requires.)

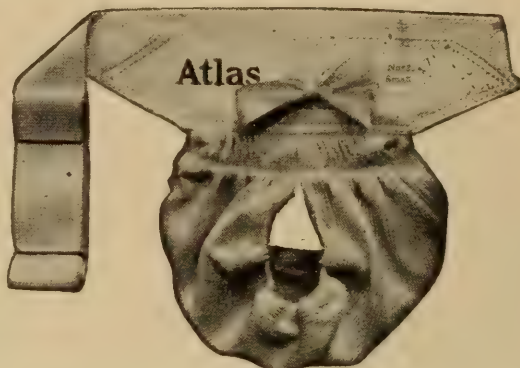

TRUSSES FOR UMBILICAL HERNIA

1. Circumference of body at umbilicus.
2. Large, medium or small rupture.
3. General condition of patient.
4. Style of truss wanted.

Not Listed in the Body of Catalogue

Manufactured By
Fred Haslam & Co., Inc.
83 Pulaski St.
Brooklyn, N. Y.

SECTION A

A-45	Littauer's Corn Knife.....	\$ 0.30
A-3408	Enterotome Scissors	2.00

Empty Sterilizer Cases for Hypodermic Syringes

A-3511	1 cc.	1.25
A-3512	2 cc.	1.50
A-3513	5 cc.	2.50
A-3514	10 cc.	3.00

SECTION B

Curettes, Bone

B-933	Hebra's (Trelat's).....	2.00
-------	-------------------------	------

Directors

B-5063	Hernia, Hahn's, pure silver.....	1.75
B-5065	Hernia, Levis'	1.10
B-5070	Hernia, Peter's	1.50
B-5075	Hernia, Stanleys90
B-5080	Hernia, Wood's, curved, with handle.....	1.10

Ether and Chloroform Inhalers

B-5090	Allis', original, plated, with soft rubber cover.....	3.75
B-5095	Allis', original, aluminum, with soft rubber cover.....	3.75
B-5099	Esmarch's, mask and cover.....	.60
B-5105	Esmarch's, with dial bottle.....	2.00
B-5115	Esmarch's, folding, with cover, bottle and dropper.....	1.65
B-5120	Esmarch's, folding, with stop-cock bottle and cover.....	2.35
B-5125	Esmarch's, folding, with stop-cock bottle and cover.....	2.50
B-5130	Gibbons'	3.00

Exploring Needles

B-5135	Reversible, metal case, for pocket cases.....	.35
--------	---	-----

Forceps, Artery and Haemostatic

B-5140	Andrew's	1.75
B-5155	Fowler's	1.50
B-5190	Hamilton's, fenestrated.....	1.50
B-306½	Ochsner's, curved, 6¼ inch, screw joint, same as B-305, but curved....	1.75
B-305½	Ochsner's, curved, 7¼ inch, same as B-305, but curved.....	2.00

Forceps, Artery and Needle Combined

B-5252	Hunter's	1.75
B-5253	Parke's	1.50

Forceps, Ligature

B-5293	Bodenhamer's	2.75
--------	--------------------	------

Forceps, Luxation

B-5295	Collins'	4.50
--------	----------------	------

Knives

B-227	Abscess, with stationary, hollow, corrugated handles, double edged blades, straight or curved.....	1.25
B-5345	Tiemann, style M. O.....	1.00

Ligature Carriers

B-5403	Allingham's	3.00
B-5410	Jewett's, right, small size.....	2.75
B-5415	Jewett's, left, small size.....	2.75
B-5420	Jewett's, right, large size.....	3.00
B-5425	Jewett's, left, large size.....	3.00

Needles

B-5431	Canulated, Von Brun's.....	1.25
B-5432	Hernia, Marcy's	1.25
B-5445	Laparotomy, Crofford's	1.25
B-5450	Laparotomy, Crofford's, Hagedorn point.....	1.25
B-5475	Laparotomy, Hall's	1.25
B-5455	Perineum, Cunningham's, self-threading.....	2.50
B-5467	Perineum, Grave's75
B-5470	Perineum, Hall's75
B-5480	Perineum, Helical	1.50
B-5481	Perineum, Knox's60
B-5486	Perineum, Ludlam's	1.50
B-5487	Perineum, Mooij's, curved.....	.90
B-5488	Perineum, Mooij's, curved, right90
B-5489	Perineum, Mooij's, curved, left90

B-5490	Perineum, Mooij's, ring handles, 4 sizes.....each	\$0.60
B-5495	Perineum, Papin's50
B-5500	Perineum, Peaslee's, plain, slightly curved.....	.75
B-5515	Perineum, Tiemann's, full curved.....	1.25
B-2185	Perineum, Whitehead's	1.25

Needle Holders

B-5525	Abbey's, 4½ in.....	1.35
B-5530	Abbey's, 6 in.....	1.50
B-5535	Abbey's, 7 in.....	1.75
B-5540	Abbey's, 8 in.....	2.00
B-5585	Hanks'	4.25
B-5595	Keen's, 4½ inch.....	1.50
B-5600	Keen's, 5½ inch.....	1.50
B-5650	Monk's, large	3.50
B-5655	Monk's, small	3.50
B-5666	Richter's, 7-inch, narrow jaws.....net	4.50
B-5576	Richter-Fowler's	5.00
B-5668	Richter's, 7 inch, with McBurney's catch.....net	4.50
B-5669	Richter's, 8 inch, with McBurney's catch.....net	4.50
B-5698	Stimson's, with wire cutter.....	3.50

Razors

B-5900	Aseptic, metal	2.50
B-5901	Diamondine, hard rubber handles.....	2.25

Retractors, Abdominal

B-5702	Funkhauser's, small	1.85
B-5705	Funkhauser's, medium	2.00
B-5710	Funkhauser's, large	2.25
B-5712	Haslam's, with hook handle.....	1.50

Scrapers

B-5742	French pattern, for bone.....	1.75
--------	-------------------------------	------

Trocars

B-5765	Drainage, extra fine.....	1.25
B-5767	Ovarian, Spencer-Well's.....	8.00

Vaccinators

B-5768	Carroll's25
B-5770	Edson's, with extra needles and handle.....	1.00

LIST OF SETS OF INSTRUMENTS IN CASES, POUCHES, ETC.

Amputating and General Operating Sets

B-5800	No. 1—Small Amputating Set. Contents: Medium Amputating Knife; Small Catling; Scalpel; Tenaculum; Tourniquet; Bone Forceps; Capital Saw; Thumb Forceps; Needles and Silk; in fine leather covered case, leather lined; each....	22.50
B-5805	No. 7—Compact Operating Set. Contents: Medium and Short Amputating Knives, with one Handle; 8 Metal Handle Minor Operating Knives; Esmarch's Tourniquet; Probes; Director; Artery and Needle Forceps Combined; Curved Scissors; Straight Scissors; Bone Forceps; Pean's Haemostatic Forceps; Tait's Haemostatic Forceps; Capital Saw; Needles and Silk; in fine sole leather case, leather lined, with handle; each.....	36.00
B-5810	No. 8—Minor Operating Set. Contents: 10 Metal Handle Minor Operating Knives; Small Bone Forceps; Tait's Haemostatic Forceps; Scissors; Plain Thumb Forceps; Fat End Director; Probes; Needles and Silk; in fine leather covered case, leather lined; each.....	22.50
B-5815	No. 26—Compact Operating Set. Contents: Same as shown on page 178 in catalogue, with additional space for bandages, etc.; each.....	35.00
B-5820	No. 27—Compact Operating Set. Contents: Same as shown on page 178 in catalogue, but with metal case and racks; each.....	40.00
B-5825	No. 17—Peoria Compact Operating Set. -------	----------------------------	-----

Files and Floats

The following list of Floats are hand forged and hand cut, thus making them far more durable than machine cut files. They have a greater number of teeth than the ordinary files, which makes it possible to operate more easily with them, as they work like a plane. Being hand cut, a harder and finer quality of steel may be used than it is possible to use in making machine cut files. They are made in our own factory, by the well known maker, J. F. McCune, and fully guaranteed.

V-505	Right, guarded, jointed handles, No. 1.....	\$ 3.00
